

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

do not furnish. It appears that Captain John Dundas Cochrane was a native of North Britain, and nearly connected with the noble family of that name, being grandson of Thomas, eighth Earl of Dundonald, nephew of the Honourable Admiral Sir Alexander F. J. Cochrane, and born in 1793. At the early age of ten, he entered the British Navy, and subsequently, as he has told us himself, served, partly under his uncle's flag, for a period of nearly ten years, "in some of the worst corners of the West Indies." At the conclusion of the general peace, he made some pedestrian excursions through parts of France, Spain, and Portugal; when, thoroughly convinced of the hardihood of his constitution, seeing no chance of professional employment, and possessing the most uncontrollable spirit of locomotion, he projected an exploratory journey into the interior of Africa. Although his Memorial on this subject was unfavourably received, his determination to undertake some arduous enterprise seems to have been unsubdued; for, soon after, *having obtained leave of absence for two years, in the spring of 1820 he set out on*

that perilous journey which forms the subject of the following narrative. His subsequent adventures are detailed in these volumes, and they will be read with the deepest interest.

Upon his return to England, Captain Cochrane again offered his services to attempt a journey into the interior of Africa; but these were again refused. He now published his *Tour in Russia*, which rapidly attained to a second edition; but having engaged in some mining speculations in South America, he left London for that country in June 1824, on the very day that the new edition appeared. In the meantime, his *Work* attracted the notice of the *Quarterly Review*, and was honoured with a critique, on the whole of a complimentary kind, but which contained several allusions and charges of such a personal description, that they demanded an instant refutation. Whether these offensive passages hastened his return, we are unable to say; but the new edition having also met with a ready sale, certain it is, that Captain Cochrane arrived in London just in time to prefix to another * a

* *A fourth edition followed within a few months.*

most spirited answer to the reviewer, which will be read with the highest interest. Without entering into the merits of this dispute, we may at least be permitted to say, that the remarks alluded to are characterised by the greatest indelicacy, if not injustice; and that the allusion to Mrs Cochrane was totally uncalled for. Both by her birth and by her attainments, this lady was entitled to respect, and, although a “Kamtchatka girl,”* that she was not deficient in personal charms, her portrait, which accompanies our second volume, can testify.

It is unnecessary to follow the Reviewer through those charges which the author himself has combated. Captain Cochrane’s volumes may furnish few scientific details, because the imperfect nature of his education unfitted him for entering upon such subjects; but a more interesting personal narrative is nowhere to be met with. He entered, moreover, upon an untrodden path,

* She is daughter to Captain Ricord, Chief of Kamtchatka, (vide vol. I. p. 320.) This amiable woman survived her husband, and returned to Russia; and by her beauty and accomplishments, no less than by the interest attached to her situation, soon met with admirers. She is again *married, and resides at Cronstadt.*

and on this account also, they are of the highest importance. Siberia was absolutely a *terra incognita* previous to his gigantic undertaking; but he has opened the way to new sources of knowledge, by giving us glimpses of countries advancing rapidly in the scale of civilisation, and rich in such luxuries as British enterprise may turn to advantage.

Of Captain Cochrane, we regret to say, that little more can be added. He returned to America by the Frolic, Leeward Island Packet; and shortly after his arrival, on the 12th August 1825, he died of fever at Valencia in Columbia.

TO HIS EXCELLENCY

MICHAEL SPERANKSI,

LATE

GOVERNOR-GENERAL OF SIBERIA,

&c &c. &c.

MOST EXCELLENT SIR,

In taking the liberty, without having in the first place asked your Excellency's permission, of dedicating this New Edition of the following Narrative of my Journey through Russia and Siberian Tartary to your Excellency, I do so, to express my grateful remembrance of the kindness and assistance which your Excellency afforded me in the heart of Siberia, as well as elsewhere.

Unaccustomed to the language of adulation,—and your Excellency's desires are above it,—I claim but the continuation of *that kindness, condescension, and good opi-*

nion which I was honoured with : and trusting to the well-known generosity of your Excellency to pardon unintentional faults, I subscribe myself,

With all respect,

Your Excellency's

Most obedient and

Faithfully obliged Servant,

JOHN DUNDAS COCHRANE.

PREFACE

TO THE FIRST EDITION.

IT has not been the kind partiality of my friends, the common apology for an uninteresting or ill written book, which has induced me to launch upon the world the following narrative of my journey to the utmost northern and eastern limits of the Russian empire; nor has it arisen from a vain idea of my being qualified for a task of the kind. No person (except the foreign nobleman under whose special countenance the principal part of the undertaking was accomplished) has recommended such a proceeding. The publication, therefore, whether of merit or demerit, is entirely prompted by the novelty of the journey, and of the mode of accomplishing it; for, even in these days of wonderful achievements, it has excited some surprise that a Captain of the British Navy should undertake a journey of many *thousands of miles*, alone, on foot,

and over a country considered as next to impassable. That the journey has only in part been performed on foot, is to be attributed to the liberality of the Russian government, as well as to the hospitality of its people. Had the Emperor Alexander, however, refused the assistance I required, solicited, and obtained, I am free to declare that it is next to impossible to traverse his empire on foot. I fairly made the experiment. For a long time I adopted that economical mode of travelling, until the pressing solicitations of every one convinced me it would be folly to decline any longer the acceptance of such offers as they were pleased, from real benevolence, to make me.

I frequently walked, and as frequently rode, and was thus enabled to go over a vast extent of country in a short time ; and such is the kind disposition of the Russian character towards a stranger, as evinced in my case, I feel convinced that, by studying their manners and customs, partaking of their amusements, showing respect to their religion, and otherwise conforming to their rude notions, the empire of Russia may be traversed by a foreigner in every direction, with much convenience, plenty of food, good lodgings, and even suitable raiment, without molestation, and this for so inconsiderable a sum, that to name it were to challenge disbelief. I shall, therefore, only state, *that the expenses of my journey from Moscow to*

Irkutsk (by the route I went, six thousand miles,) certainly fell short of *a guinea*.

Such being the case, such being the novelty of the journey, such being our ignorance of Siberia, and every thing connected with the public institutions of that distant part of the world, I consider it my duty, as well as my interest, to submit to the candour of an indulgent public the following pages. Effectually to disarm the critic, I need only say that I entered into the cockpit of a man-of-war at the very early age of *ten*. If that be not sufficient, let the fact of a journey of more than thirty thousand miles, performed under peculiar circumstances, be taken as a set-off against a want of powers better fitting an author than a traveller.

I cannot, however, but entertain a hope, that the narrative will be found not void of interest. It contains no alterations from the original notes; it has simply been lopped of those branches which could not interest the English reader; probably, it has not even yet been sufficiently pruned, for I fear I have still left marks of having pryed into proceedings which may appear not to have come within my province. When my readers, however, consider the peculiar situation in which I was placed for more than three years, I hope they will give me credit for the impartiality of my opinions, and the truth of *my statements*. Respecting the

character of the Russians, I do not feel myself competent to give what may be termed a proper description. I might be charged with a want of impartiality, and therefore prefer that my readers should form their own estimate, after a due consideration of the facts stated in my narrative. The variety of conflicting testimonies has rendered the task still more difficult ; some who have written upon the subject have grossly exaggerated, while others have advanced assertions totally unfounded. Thus much, however, I will take upon myself to say, that no people have made more rapid strides towards civilisation, and moral and intellectual improvement, than all classes of the Russians ; and further I say, that their catalogue of failings, for they do not merit the appellation of crimes, by no means exceeds those of other countries.

There is another ground on which I would fain persuade myself that these pages may be productive of some good ;—may they not prove the means of stirring up the enterprising spirit of those who have better means and greater talents than I pretend to ? Should a traveller who has the pecuniary means, the requisite talents, and the spirit and perseverance indispensable, enter upon the vast fields of Tartary, he will find ample scope for the exercise of his genius, whether he be a philosopher, a botanist, a naturalist, or an historian. For myself, I profess only to have acted in the capa-

city of a rough pioneer ; and, having cleared the way, I leave the road open for the scientific, to pursue his journey when it best suits him.

To the impatient mind these pages may also afford a salutary lesson. Should such a character peruse this narrative, and trace me through a long, laborious, and highly perilous journey, contrasting the frequent miserable situations in which I have been placed with his comparatively happy one, he will, I trust, learn “ to be content ;” he will also learn, that there are few difficulties which patience and spirit may not overcome, and that man may fearlessly go where he will, so long as his conduct answers to his movements.

I may be allowed to add, that, after such a journey, I might be supposed cured of the spirit of travelling, at least in so eccentric a way ; yet the supposition is far from the fact, for as I am conscious that I was never so happy as in the wilds of Tartary, so have I never been so anxious to enter on a similar field as at this moment.

THE AUTHOR.

PREFACE

TO THE SECOND EDITION.

IN presenting to the public an enlarged and corrected edition of this Work, the Author avails himself of such an opportunity to return to the public who have read, and to those reviewers who have kindly criticised it, his thanks for the patronage of the former, and for the liberal indulgence which has been extended to him by the latter. The few critics who have in any way censured the peculiar mode of travelling adopted by the Author in the prosecution of his journey, may rest assured, that in no other manner could he have proceeded to the extremities of Asia; and as he is quite satisfied that such observations could only have arisen from mistake, he begs leave to return them also his thanks for the attention which they have drawn to his work.

June, 1824.

PREFACE

TO THE THIRD EDITION.

I SHOULD, indeed, ill deserve the attention which the Editor of the *Quarterly Review* has devoted to the Narrative of my Journey through Siberia and Tartary, were I to feel ruffled by either of the severe remarks which, in his judgment, it has been necessary to visit me with ; so far from such a feeling, I feel obliged to *him*—nor, indeed, am I disappointed ; I am only surprised that I have not been more severely handled by the learned critics in general, in spite of the original preface which I had hoped would have disarmed them. With respect to the *Quarterly*, in particular, I can only say, that although it has had no effect in causing this *third* edition, still I feel confident it will have the effect of rendering more rapid the sale of it ; for whoever will read the flattering concluding paragraphs, will, I doubt not, come to the same satisfactory *inference*.

Having thus made due acknowledgments, I shall beg leave to remark upon a few of their *unsupported* charges ; and in doing so I hope to proceed with perfect good humour, conscious that no ill will was intended ; and if I do it in a slovenly manner, I still hope for fresh latitude, in consideration of this third edition being ready for binding—a circumstance I could not have known in time, *arriving*, as I have done, only this day from South America ; coupled also with the singular fact, that the second edition was published the very day that I *left* London.

The first charge brought against me consists in the assertion, that the work is in general without *dates*, and that, therefore, what I have *told has not always been correctly told*. Now, I am no logician, but this does not appear to me a candid or justifiable mode of criticizing a work, because it is a direct tax upon veracity *alone*. Surely a fact may be stated, without specifying the time when it took place ;—nor is the Editor borne out in his assertion, or insinuation, by his supposed subsequent proof, that I have asserted what I could not have known. In order, however, to account for the omission of dates, I must tell the public, that if a blunder was committed, it has not been by me, but by no less a literary gentleman than Mr Barrow ; his opinion and advice, with such a novice as I am, in a literary view, ought to have

been followed ; his knowledge of the most agreeable forms of bringing a work before the public is so well known, that I am certain the same public, as well as the *Quarterly*, will excuse the blunder, and leave veracity as it stood.

The circumstances which led to the general omission of dates were rather curious ; and as Mr Barrow may have forgot the conversation which passed between us at the Admiralty, I shall relate it, and I do so, because I have not time to acquaint that gentleman with my intention of publishing it,—this explanation will, I hope, plead my apology with Mr Barrow :—Upon my return to England, from Russia, and when about to commence the narrative of my journey, I was desired to submit it to Mr Barrow, previous to publication—I did so, with a perfect knowledge that it would benefit much. When he came to that part of it which states my departure from St Petersburg on the 24th *May*, I remarked that the *moon was near her full* ; Mr Barrow, with his accustomed ingenuity and foresight, referred to the almanack, by which it appeared that there was *no moon at all on the 24th May* ; accordingly, at our next meeting, he, wishing to prevent my falling into so gross an error, kindly said, “ that I intended keeping company with Bruce, the African traveller, who showed the Abyssinians an eclipse which was not visible in Africa, although it was so elsewhere.” Con-

scious that I had not written what was not true, he referred to my assertion of the near *full moon* on the 24th, and compared it with the almanack ; I referred to my passport, it is dated the 24th, and I knew the moon to be full on that day, for it was *old style*,—the riddle was thus explained ; for new style being the 12th May, the moon *was near her full*. While in Russia, I adapted myself, as nearly as possible, to every circumstance connected with that empire ; among others, to that of following their O. S. I, however, agreed with Mr Barrow that it would be better to leave dates out, as such might cause a confusion ; and where only a personal narrative was intended, could not consider it of much consequence. This tedious explanation, I hope, will be pardoned, in consequence of the hasty inference drawn from it by the *Quarterly*.

With respect to the next charge, a *supposed* more serious one. I think differently. I was not employed by the Admiralty to undertake a journey through Siberia or Tartary ; as such I cannot have acted derogatory to my rank or character. The Admiralty, while I was on half-pay, had nothing to do with the one or the other. I got no L.5000 advance to fit me out with telescopes, thermometers, barometers, or the like appendages of a scientific expedition. I had no such object in view. It was enough for me that I had their Lordships' leave to travel, upon certain conditions—those

conditions I complied with; and it matters not how I travelled, how I dressed, how I fared, or how I got on. I did certainly intend a pedestrian trip; that I found impossible in many cases, from a variety of causes, none so strong as the hospitality of the Russians, *who will not allow you to travel on foot if they have a horse to lend*; nay, what will the Editor of the *Quarterly* say, when I assert, and appeal to the Governor-General Speranski for the truth of my assertion, that officers of the highest cast, when travelling in Siberian Tartary, scarcely ever pay for provisions?—the natives will *not take* the money, and if they did, I doubt what they could or would charge, when the extraordinary low price of provisions is taken into consideration. I have often seen the owners of horses fighting for the honour of driving a superior officer, *gratis*; also have I seen them tackle on three and four extra horses, that such an officer should go with more *than state*, that is, with great inconvenience; and, were it not for the beauty and breadth of the roads, I might say *with danger*. To sum up with the hospitality of the Russians, especially those of Siberia, I will only add, that nothing is so easy as to gain admittance into their mansions or dwellings, nor any thing so difficult as to leave them.

The charge brought against me, of stating the degrees of cold *in the valley of Sartan*, without the

aid of a thermometer, is also without foundation. It is, however, true, that I lost the few instruments I had taken from St Petersburg soon after I left that capital; but such a fact was no reason why I could not, or did not, procure others. Does the Editor of the *Quarterly* suppose, that Russia is so backward in the possession of astronomical instruments? If so, it is a mistake; and I could say, that their officers are possessed of more scientific instruments than ours in general are. The truth is, I procured a thermometer at Moscow, a second at Yakutsk, and a third at the Kolyma. When I have marked so low as 42° of Reaumur, I beg to inform the Reviewer that he must not suppose that, in Siberia, there are not hundreds of spirit thermometers, and, such being the case, I marked *what* number of degrees it showed by Reaumur, and not by Fahrenheit, which I then considered was a thermometer more befitting a warm climate.

When I stated having seen the thermometer so low as 42° of Reaumur, and brought in the testimonies of Admiral Saretcheff and Captain Billings to bear out my assertion, I did it, not from a doubt of its truth, but from a desire that the unfounded assertion of this *same Quarterly Reviewer*, some years ago, should not be tolerated,—that Captain Parry had wintered on the coldest spot of the globe. I do not believe a thing of the kind. I cannot doubt *but* that many of the most eastern parts of Nor-

thern Siberia are infinitely colder than Melville Island. My assertion of 42° of cold *would have been discredited*, when the *Quarterly* knew my entire want of scientific knowledge, and the superabundant quantity possessed by him and Captain Parry, who found no more than 57° of Fahrenheit.

I thank the Editor of the *Quarterly* for his very ingenious and logical query, (vide p. 224;) where he says, "We are not surprised that these poor people (the inhabitants of the Kolyma) should be subject to many diseases, more especially the scurvy; but we are somewhat *staggered* with the Captain's assertion, that it is cured 'by the consumption of raw fish, during the winter;' but, if cured in the winter, how happens it that 'in summer, the disease never fails to abate with the arrival of fresh fish?' If it be cured in the winter, and abates in the summer, when does it exist in force?" I reply, in winter the scurvy *rages*, and that it is cured in winter by the consumption of raw fish; also I agree that it abates with the arrival of fresh fish. To get out of this apparent logical difficulty, to the *Quarterly* would be a hard task; not so to me, who am now taking advantage of the shrewd and active mind so graciously granted me by the *Quarterly*.

The scurvy rages during winter with the poorer and consequently with the greater, proportion of the inhabitants of the *Kolyma*, because they, the

poorer sort, cannot *afford* to eat raw fish, it being an article of *luxury*. It is true, that a most prodigious quantity of fish is caught on the banks of the Kolyma, but it does not follow that such a quantity is eaten *raw*; indeed it is only a very small proportion that can be so consumed, and that quantity is naturally bought up and retained by the more wealthy part of the community.

Herrings are the principal productions of the Kolyma, and are retained for the dogs. Red salmon constitute the next quantity, and are universally used by all classes, by being boiled, or dried up into youkola. The nailma, and, I think the osioter, being white fish, are the only species that are eaten in a *raw state*; while mocksou and mockson are expressly converted into youkola, one for man and the other for dogs. There is also another reason why the poorer classes cannot partake of raw fish; it is not only dear and scarce, but it is a most extravagant mode of eating fish, for a person can consume three times the quantity in a raw state, that he can either boiled or in the way of youkola. I hope this statement will be understood by my readers.

With respect to the memoir which I addressed to the Royal Society,* and which may be deemed

* This Memoir, and the Map which illustrates it, will be found in the second volume.—ED. of C. M.

unintelligible without at all offending me, I have nothing to say. Had there been any real and substantial reason for refusing the memoir, I feel certain the all-knowing Editor would freely have given it. Be this as it may, I do still maintain that I had a right to expect common civility and common courtesy from Sir H. Davy and his colleagues in council; and I still assert that their conduct has betrayed a want of fair dealing, unpardonable in any one, but more especially censurable in a learned, an enlightened, and a public body.

In page 226 the learned Editor seems to forget his own want of propriety. He has before much harped upon the derogatory manner in which I travelled, &c. so improper for a person of *my rank*; and yet, in speaking of my wife, he terms her *a Kamtchatka girl*. As far as age could warrant the term, he may be correct; but I should have expected *his very refined notions of propriety* might have induced him to have extended the trouble he took in writing about her, to have called her a young lady. There, however, seems to have been a lurking desire to have added more than had a reference to my narrative;—the causes are known to me as well as to the Editor.

With respect to that hankering after reasons why I did not go over to America, and the desire the Editor has to induce me to charge the Russian government *with preventing it*, because there was

already a Russian Expedition there,—I unequivocally declare there was nothing of the kind. I never was stopped by them from going where I chose ; they did me the honour to grant me a *carte blanche*, which I did not abuse. With regard to the assertion, that I have referred to the reasons *before given*, and, as the Editor says, *nowhere stated*, he might have imagined what was correct, viz. that I referred to the reasons given for not going with Baron Wrangel, in a letter dated from the Kolyma, and which were such as any honourable officer would have given, conscious of his own capacity, and jealous of his own honour.

The Editor is very fertile in finding out doubts of my veracity, and yet he finds fault with my having previously advanced testimonies of it, as it ought not to be doubted ; but, he lastly tells me, that the cause of my saying that there are no females in Maimatchin, arises from merely the fact, that the Chinese told me so. Pray how would this Oriental reviewer have had me to inquire and satisfy myself except as I did ? I have no doubt of the truth of what I have stated, for the houses are not so contrived, as I have explained in the narrative, as to admit of a space and secret room ; and, as I have also stated, the Chinese at Maimatchin, and the Russians at Kiakhta, live upon more friendly terms than can be expected else-

id not more closely averse with respect
g their ladies, as asserted by the reviewer.
ertainly give other reasons in corrobora-
y assertion, did propriety permit me ; nor
x the refined delicacy of the Editor such
e induced his noticing a circumstance of
for, in various parts of the same number,
peculiarly susceptible of his tender organs.
ng the extraordinary stories I have re-
the gluttony of the Yakuti, &c. I am not
ged to the *Quarterly* for putting me in
any of Captain Bobadil, but also in com-
wo of his “ declared bright examples for
is of ages to come,” viz. Captains Parry
1. Methinks the Editor feels rather sore
subject, else I feel confident, neither the
gluttony nor my abstemiousness would
a taken notice of. It is, however, not un-
to read the comparative and significant
attending his bright and scientific exam-
those thrown at me ; but, I will tell the
would rather eat raw fish (and I regret
annot send him some for trial) than be
a the midst of plenty, in the one instance ;
other, be compelled to roast old shoes,
n old clothes, nay, to eat a parcel of my
l companions.
I thank the *Quarterly* for his complimen-

tary concluding paragraphs, for which I now present him a third edition, and, spite of fate, hope to send him a fourth in a short time.

J. D. COCHRANE.

JOURNEY

THROUGH

ITALY AND SIBERIAN TARTARY.

CHAPTER I.

for undertaking the Journey—Dieppe—Rouen—
—La Ferté—Chalons—St Dizier—Nancy—Metz—
—Landslut—Kaisers Lautern—Frankfort—
—Fuld—Erfurth—Leipsic—Dueben—Pots-
—Berlin.

month of January, 1820, I addressed a
the Secretary of the Lords Commissioners
Admiralty, offering to undertake a journey
interior of Africa, which should have for
the ascertaining of the course and deter-
mination of the river Niger. Besides the bent of
inclination, I had an inducement to this
the conviction, established by experience, of
ability to encounter the ordinary difficulties
of a pedestrian traveller ; having, on the conclusion
of general peace, *traversed on foot the beautiful*

countries of France, Spain, and Portugal—an excursion in which I certainly underwent a full proportion of fatigue and privations ; to say nothing of those I had for years before been in the habit of undergoing ; among which I might enumerate two trips from Quebec to Lake Ontario, when in company with six hundred seamen, whose wry faces and swollen feet told me I was more of a pedestrian traveller than they.

The plan I proposed to follow was nearly that adopted by Mungo Park in his first journey ; intending to proceed alone, and requiring only to be furnished with the countenance of some constituent part of the government. With this protection, and such recommendations as it might procure me, I would have accompanied the caravans in some servile capacity, nor hesitated even to sell myself as a slave, if that miserable alternative were necessary, to accomplish the object I had in view.

In going alone, I relied upon my own individual exertions and knowledge of man, unfettered by the frailties and misconduct of others. I was then, as now, convinced that many people travelling together for the purpose of exploring a barbarous country, have the less chance of succeeding ; more especially when they go armed, and take with them presents of value. The appearance of numbers must naturally excite the natives to resistance, from motives of jealousy or fear ; and the danger would be greatly increased by the hope of plunder. The death of the whole party, and consequently the failure of the expedition, will be the probable result of such a plan. The difficulty of finding men, otherwise suitable, whose constitutions admit an equal degree of suffering and fatigue, is also great ; *and that of collecting a number of people gifted*

the due portion of those virtues without which expedition of discovery could succeed, is certainly a greater.

My answer from the Admiralty was unfavourable, expressing an unwillingness to countenance undertaking; whether from tender regard to the safety of my person, or because they considered an expedition foreign to their department, or what other reason, I shall leave the reader to conjecture. I was not, however, the less convinced of the practicability of my plan; a plan which I consider was more than ordinarily feasible; and, who had been roasted in some of the worst climates of the West Indies, during a period of seven or ten years' service, without, I may say, a scratch. Finding, however, that a young commander like myself was not likely to be employed on shore, much less ashore, I determined to undertake the journey, varying only the object and the scene, from that of the unfortunate Ledyard, viz. to circumnavigate the globe, as nearly as can be done, crossing from Northern Asia to America, through the Straits. I also determined to perform the journey on foot, for the best of all possible reasons, that my finances allowed of no other. Having procured two years' leave of absence, I resolved to traverse the continents of Europe, Asia, and America.

It is only candid to premise, that the account I am about to give of my travels, can but little gratify the scientific reader. I confess my ignorance of natural history, nor, had I been ever so skilful, I, travelling on foot, have brought away with me any specimens of animals, plants, or minerals. I had no means of carrying with me such instruments as are necessary for making geographical ob-

servations of places, of the state of the air, or such other matters as are generally expected to be noted by travellers ; the few instruments I did possess were taken from me, as will hereafter appear.

My first and leading object was to trace the shores of the Polar Sea along America by land, as Captain Parry is now attempting to do by sea ; and, at the same time, to note my observations on men and manners in the various situations and conditions of life ; for which such a journey could not fail of presenting many opportunities. Having therefore procured such documents as were necessary, and filled my knapsack with such articles as I considered requisite, to enable me to wander through the wilds, deserts, and forests of three quarters of the globe, I quitted London, and landed at Dieppe from the packet-boat.

My regret at quitting the shores of Albion was not likely to be counterbalanced by any pleasurable reflections on reaching those of France ; but having been forty hours on board the packet with little or nothing to eat, I cheerfully submitted to the ordeal of the French searchers, at the modest price of a franc ; and, with my knapsack on my back, walked on to one of those most accommodating of all places of entertainment, announced by the simple words of "*logement à pied ou à cheval.*" I there procured a bed and supper for the same reasonable price that I had paid for the honour done me in the official examination of my precious wallet.

Being reluctant to incur the expense of five francs, to obtain my passport on Sunday, I was content to devote the day to celebrate the eve of my birth-day, of the Carnival, and of St Valentine ; having visited what may be deemed most worthy in the pretty, clean, and well-paved town of

Dieppe,—the retreat for the vicious, and refuge for the unfortunate.

Monday, 14th February, I commenced my route towards Paris, over a well-cultivated but thinly peopled country, on which are a few pleasant country seats and neat villages, with a road far superior to that from the capital to Calais. I contemplated, as I jogged along, some of the differences between France and Spain, comparing the facilities of traversing the former, to the difficulties and dangers attending the latter; and contrasting the servile, frivolous, and seductive Frenchman, with the noble, proud, and hospitable Don. Nor is the scenery of the two countries less opposed; the bold, romantic, fertile, and mountainous features of Spain, to the long, low, sloping declivities, and the tame, though cultivated, eminences of France.

About a mile, however, from Rouen, the prospect became more interesting. To the right and in front wound the silvery Seine, its bosom studded with vessels to a degree extraordinary at this season of the year. In the distance, in front and to the left, stood the city of Rouen, with the spire of its truly venerable cathedral, and other steeples and public buildings, rising over various parts of the city; farther to the left, a range of hills, in a high state of cultivation, sloped down to a number of handsome chateaux and pretty cottages; while the lawns, covered with cottons and linens spread out to bleach, gave an air of cheerful and honourable industry to this portion of the department of Lower Seine.

I put up at a *table-d'hôte*, and, for three francs a-day, procured the opportunity of viewing the wonders of the ancient, *but dirty, narrow, and*

crooked-streeted city of Rouen. The cathedral is, of course, the first object of attraction ; but, however beautiful its Gothic design, or however excellent its modern improvements, the effect of both is lost from the peculiar unfriendliness of its situation ; surrounded, on three sides, by dirty lanes, so close that the backs of some of the houses are formed by the walls of the cathedral. The interior corresponds with the exterior in point of decoration ; though of its furniture little else is to be seen besides enormous piles of old chairs. I left this once so beautiful, but now disfigured edifice, to wander through the aisles of St Owen, a fine and perfect Gothic specimen, whose grandly elevated roof, and highly finished painted windows, seem capable of inspiring a religious feeling far beyond those of the cathedral. The archiepiscopal palace, the barracks on the banks of the Seine, a large Gothic building converted to public offices, and the Hotel de Ville, are also deserving attention. Rouen has a tolerable library, and a cabinet of paintings, including numerous pieces of the old school ; their description is too much out of my sphere to be entered upon ; and, were it otherwise, the indelicacy of some of them might well forbid their reception by an English public.

Ascending Mount St Catherine, I now overlooked the river and great part of the surrounding country, which, even at this season of the year, presented an interesting scene, where the boulevards, by far the cleanest part, stretch along three sides of the city to a great distance, with the cathedral and other churches ; the beautiful windings of the river, now bounded by high and chalky cliffs, and then by low meadow-lands, with its numerous inhabited and well-cultivated islands, remind-

of the "Chinampas," or floating gardens of

at St Catherine had some time back a fortress; though now scarcely the vestige remains. Possibly it was destroyed on as palpably unnecessary to the protection of *cred territory*. The communication across is formed by a heavy bridge of boats, together in the most unskilful manner, the of wood admitting of little or no play, so y during the breaking up of the ice, or the and swellings of the river. The *great nation* obtain some useful information on floating from Oporto to Seville.

urned to the city, in time to witness what blic feeling was exhibited on the informa- received of the Duke de Berri's assassina- and having gallantly paid my devoirs to the the Maid of Orleans, departed, convinced men, like other great cities, presents too be seen, and too little to interest.

first part of the journey from Rouen to on the banks of the Seine, then under St Catherine, and afterwards over a con- y elevated ground. Cultivation is here pur- an extensive scale, but the scene is unin- ; from its sameness and the total absence ures, recalling to the English traveller the beauties of his own country. Passing a y villages, you reach Bordeaux de Vigné a a considerable town, distant twenty-eight From hence to Paris is a well-paved road, the ancient town of Entreuil; the country comes more interesting and better peopled, t has little else to denote its proximity to

the second capital of Europe. I arrived late, and put up at the Hotel de Conte.

I remained at Paris several days waiting for my passports, for which no less than seven signatures and as many francs were required. I was happy enough to find a worthy friend in the person of the late Colonel Mercer, who, with his amiable daughters, did every thing possible to lessen the expense and ennui of the delay. All public amusements were, however, prohibited for a certain period, in consequence of the Duke de Berri's death, much, I suspect, to the mortification of the Parisians, who, whatever be their love to the *grand monarque*, appear but little attached to his august family.

Paris has ever appeared to me dull, probably from my want of means to enter its vortex of dissipation; but as I was not wholly insensible to the wish, I resolved immediately to quit it, leaving to others the task of describing over again what has so often been described. I set out, therefore, on the 20th, with the intention of crossing the Rhine at Frankfort, taking Nancy on the road. Twenty-two miles on my route lay the episcopal city of Meaux, whose cathedral is certainly deserving of notice, inasmuch as its exterior is completely finished, a rare case with French cathedrals. The country about it is low, and as uninteresting as the city itself. Passed the night at La Ferté sous Jouarre, a considerable town on the Marne, celebrated for its trade in mill-stones, which are thence exported in great numbers. I was too fatigued to enjoy more of the comforts of a decent auberge than that of a bed, such as it was, consisting only of a blanket, with my knapsack for a pillow. Reached Port-a-Binson, late the next evening, having gone through several considerable towns, among

which is Chateau Thierry, beautifully situated on both banks of the Marne, connected by two bridges, which are again connected by an island in the centre of the river. The country here assumes a more romantic appearance, and the people seem happier and more good natured, with less of that forward and impertinent curiosity so characteristic of French manners. At a distance of twenty-four miles, I reached Chalons, in Champagne. It was not probable I should pass this province without tapping a bottle of so celebrated a wine, with which the town of Epernay furnished me for three francs and a half.

Epernay, with its scenery, is truly romantic, as observed from an elevated situation above Chateau Thierry. It reminded me much of the scenery in the North of Portugal, near the river and bridge of Coa.

Leaving Chalons, I directed my steps towards St Dizier, over a hilly country. The road was bad, but rendered lighter by the company of some pedestrian travellers. Our route, however, was through a flourishing vineyard and a highly picturesque scenery, abounding with wood and water; but dirty and populous villages everywhere offended the eye, presenting a strange and paradoxical appearance, as if health and dirt were as congenial in France as health and cleanliness are in England.

I reached St Dizier late in the evening, exceedingly fatigued; put up at a decent public-house, where were plenty of other travellers enjoying the comforts of a Saturday night, when an extra franc is spent. The latter circumstance I mention, that gentlemen travellers (I know not to what classification of the tribe *Laurence Sterne* would have re-

ferred me) may observe, that we of humbler habits and pretensions have our red as well as black letter days. St Dizier is an ancient town, near the navigable part of the Marne, built in the year 951, and is the chief town in the department of the Meuse, lying in a fertile country. Grapes are here abundant, and many beautiful views may be glimpsed through thick groves and vineyards, common to this part of the country. Breakfasted at Barsur-Ornain, generally called Bar-le-Duc. The next place in point of rank, in the same department, is Ligny, with a collegiate church, and a palace belonging to the Counts of the same name. Passed through Void and St Aubin, the former, apparently, a pleasant lively place, containing three thousand inhabitants; thence, through Toul, an ancient bishopric of Lorraine. The country was hilly and fertile, producing abundance of good and tolerably cheap wine.

The following day I spent at Nancy, enjoying the beauties of this Bath of France, and capital of Lorraine. It is still a fine city, although dispossessed of its former privileges and honours. The buildings in general are noble; the Hotel de Ville superb; the Council House, in the new square, very fine; and the regularity and cleanliness of the streets deserving of praise. The promenades are kept in good order, and every thing denotes that Nancy is a well-conducted and highly civilized city. I took the benefit of a warm bath in excellent style for one franc, and next morning departed, taking the road to Metz, and enjoyed one of those delightful walks which seldom fall to the lot even of a traveller, much less to those slaves of ease who get up but to go to rest, and live but to die. The road stretched along the beautiful banks of the

Meuse, winding through numerous valleys, betwixt a succession of hills, whose summits assumed the form which sailors would term "table lands." I crossed the river by a well-built modern bridge, just at the point where the Meuse falls into the Moselle. The fertility and industry of this part of France are alike apparent; each side of the river was a continuity of vineyard or orchard, the river winding round the forest-topped hills, branching out at intervals into several streams, and then uniting in a sort of rapid. The numerous towns and villages, everywhere interspersed, exhibited their influence on the scene, pouring out to their healthful occupations a thick population of robust and cheerful labourers.

On the last day's march I fell in with one of Napoleon's soldiers, who had had the misfortune of being for two years and a half immured in a Russian prison, if the wilds of Siberian Tartary possess any building which can merit such an appellation. He protested "by his faith and respect for Napoleon;" and if I may judge from what I heard, I must suppose the expression spoke the sentiments of a large portion of the Bourbon subjects. His veracity was indeed questionable, declaring that he had been seven days without food, at Witepsk; and that out of five hundred and thirty Frenchmen confined in the same prison with himself, but twenty-three remained alive to tell the dreadful tale. It took them, he said, eight months' travelling to reach their destination at Tobolsk.

He was, however, a lively and even a serviceable companion; for, upon complaining of my feet becoming blistered, he communicated to me as a secret, a mode of cure which I have never found to fail. It is simply to *rub the feet*, at going to bed,

with spirits mixed with tallow dropped from a lighted candle into the palm of the hand. On the following morning no blisters will exist; the spirit seems to possess the healing power, the tallow serving only to keep the skin soft and pliant. The soles of the feet, the ankles, and insteps, should be rubbed well; and even where no blisters exist, the application may be usefully made as a preventive. Salt and water is a good substitute; and, while on this head, I would recommend foot-travellers never to wear right and left shoes; it is bad economy, and indeed serves to cramp the feet; and such I felt to be the case as I arrived at Port-à-Marsan, a pretty town, with a good inn and a better market. Thence, over a variously cultivated country, I reached the outworks of Metz, situated at the confluence of the Moselle and Seille, two rivers which are nearly carried round the city by the aid of canals, &c.

Metz is a place of great importance and strength, and has frequently endured the horrors of a siege. It is the see of a bishop, whose cathedral, like that of Rouen, is secluded among the habitations of barbers, tailors, and cobblers; like Rouen, too, it is but a dirty place. The dwellings of the Israelites are restricted to a particular part of the city; I saw a few of them, with their long beards and black cloaks—a distinctive dress which they are compelled to appear in.

Next morning, with the sound of the bugle, and at the opening of the gates, I resumed my march, having previously sent my knapsack by the diligence to Frankfort. The day proved fine, which enabled me to reach Sarrebruck, five miles within the barrier of Germany. The scenery was wild and interesting. Many cultivated spots smiled

through the immense dark forests ; and even on the frontier line, the romantic view, combined with the thought of entering a strange country, unknowing and unknown, and ignorant of its language, had nearly overpowered me, until the sight of a neat little public-house brought me back again to John Bull and his happy home. And although that part of the world may not bear a comparison with England, still the picture had many points of resemblance. The country was highly cultivated, and inhabited in the manner of straggling farms ; and the country inn, with its tap, and red-faced landlord, cheering fire, plenty of good beer, tobacco, a smoky room, with boisterous guests, all in high dispute on politics, and keeping up Saturday night, were no bad emblems of England, and, as such, truly acceptable to a cold, dispirited English traveller.

After a walk of forty miles, I supped with some itinerant Jews, upon a genuine German repast, viz. milk soup, fricasseed veal, pancakes, roast joint, with a sausage, called in London brawn. We had also our dessert, consisting of apples, pears, nuts, and good wine ; and with such fare and such company, I was bound to feel happy. Previous to retiring, I could not help remarking the difference in the education of a German and a Frenchman. The frontiers are the very best places to observe it ; address a German, however poor or vulgar his condition, upon any subject, and his answer will prove that he has been at least partially educated. Accost a Frenchman in like manner, and you will have for answer, “ Monsieur, cela je ne puis pas vous dire,” with a shrug of the shoulders, which none but a Frenchman can render equally expressive or ridiculous. Nor does the comparison stop here. The manners of *the people, their diet, the econo-*

my and cleanliness of their houses, nay, the modesty of their females—in a word, every thing that renders life agreeable, remind me forcibly that I am not going to bed in France.

I slept well, and, after paying twenty francs for the indorsement of my passport, having neglected to bring the Prussian claw from Paris, I resumed my journey. Three leagues over an uncultivated country, I passed the remains of an old castle and mutilated tower, and entered upon a finer prospect, with the pretty little town of Homburg in the foreground, at the foot of a mountainous precipice.

At Homburg I enjoyed my pipe and supper in company with my German landlord, whose extraordinary deference to my opinion was calculated to make me grow in favour with myself. My next destination was to Kaisers Lautern, over eight leagues of dreary and uninteresting country. Snow fell in considerable quantities, and every thing assumed the most dismal appearance, except that the cottages and smoke, peeping through the woods, denoted that something like man was not distant. At Landshut I attended the Protestant church, in spite of the very noisy and bad singing, and the remains of Romish indulgences, as keeping open shops, playing at cards, &c. Resumed my journey over an unpleasant wet road. The country appearing more cultivated, although barren of population, induced me to ask who tilled the lands; I could only, however, conclude that a class of people, called Labradores in Spain, come here to earn, like the Irish in our own country, a little money to enable them to go back to their homes.

Kaisers Lautern is a considerable town, with seven thousand inhabitants. It is well built, and so clean as to present somewhat of the appearance

of an English market or borough town. Its situation is agreeable, surrounded by high and cultivated lands. It is said to belong to the King of Bavaria at present ; at least the public-house at which I put up for the night belonged to his Majesty. Mayence, I believe, belongs to the Duke of Hesse Cassel. Frankfort is a free city, and Prussia is within a stone's throw, so that, in fact, it was difficult to know under whose colours I was wandering. So much for the acts of the great Vienna Congress, which have placed seven flags within the compass of two leagues.

Bidding adieu, however, to Kaisers Lautern and politics, I passed the fertile and picturesque plain on which it stands, and, ascending a long and steep hill, entered on a close country, covered with thick and impenetrable forests ; dined at Kirchin Boland, and reached Alzey late in the evening. The inhabitants were not remarkable for civility ; for the landlord of the inn I first stopped at, actually turned me out, because I was no more than a foot-traveller. I judged it better to pocket the affront ; and, having purchased a small loaf of bread, I pushed on, fatigued, cold, and mortified, till I reached a cottage, whose adjoining barn furnished my night's shelter, and I reposed with perfect content upon clean hay. Next morning I quitted my humble dwelling, and, accompanied by innumerable carts, carriages, and Jews, proceeded towards Frankfort. I arrived at Mayence, stopping at the Imperial hotel, near the cathedral, and obtained my first view of that city, which holds so high a rank in Germany. The privileges formerly appertaining to it and its archbishop, are gone on the same errand as many others, in consequence of the recent arrangements of the *Congress of Sovereigns*.

The Rhine here assumes a magnificent appearance, about the same width as the Thames at Westminster, and is crossed by a bridge formed of fifty-two boats, six hundred and thirty paces in length. Passing through a small fortified place opposite to the city, I pursued the road to Frankfort; and, after walking over an elevated and romantic country, (whose general scenery reminded me of the Sierras of Placentia, viewed from the high road between Badajos and Madrid, heightened as the comparison is by the striking similarity of the productions,) I was at length gratified with entering the free and independent city of Frankfort.

The approach is very pleasing, amidst orchards, gardens, and vineyards; and one of those small but beautiful towns, belonging to the opulent merchants, is contiguous to the city. The houses are all on an extensive scale; the architecture is good, and the material generally free-stone. Another range of stately edifices, now converted into manufactories, and buildings of every imaginable size and decoration, from the stately mansion to the comfortable residence, down even to the neat cottage and the miserable cabin, all are here seen promiscuously thrown together, and liberty seems to wave her triumphant banner over them.

I put up at the Wine Bush, a stately hotel, of which a Mr Mohr was landlord, and whose brother had kept a tavern in England for twenty-eight years; which, in consequence of some information lodged against him at the Alien Office, he had been compelled to quit, with an English wife and six children, to seek an asylum in his brother's hotel.

Frankfort, as a city, is too well known, and its fair too celebrated, to need description here. It was formerly a fortified place, but the walls have

been entirely demolished, and indeed their ruins are the best protection it can have. A young Livonian baron, whom I met at the ordinary, gave me letters of recommendation to the frontiers of Siberia, and I departed.

The month of March brought with it much snow, and made my walk to Hanau a dreary one. Next day, passing over a low, flat, and uninteresting country, I reached Schlucten. The road was in a dreadful state, and my feet equally so. I took temporary refuge in a small inn, whence I was soon driven by the rudeness of a sot. This fellow had even the audacity to follow me to another; but here his character was well known, and the opportune appearance of his wife, and her very free and dexterous use of a good cudgel, together with the remonstrances of the landlord, for a time rid me of his impertinence. Finding, however, a strong backer in his faithful dog, who would not permit any interference between man and wife, he again seated himself, and I set out once more in quest of a night's quarters.

Fuld, a beautiful little city, with a handsome cathedral, some colleges, two squares, many fine public and private buildings, and well-regulated promenades, was, after Nancy, the pleasantest place I had seen on my journey. I arrived very late, and much fatigued, having been induced to go so far by my companions, a wandering tailor, a regenerator of kettles, and an Italian cage-maker. Our community of fare enabled me to reduce my expenses one half, a measure not wholly unnecessary from the state of my purse. A miserable barn was our only shelter, which, it may be supposed, I quitted as soon as possible for Berka, ascending a steep hill, knee-deep in snow. The task was

difficult, nor did I arrive till noon. The view from the top of the hills which overhang Berka, was extensive but desolate ; hill, dale, and valley covered with snow, and nothing but the steeples of churches and the smoking chimneys to relieve the scene, till, late in the evening, I reached Saxe Gotha. It appeared a handsome city, with many fine edifices.

Erfurth, where I arrived at noon next day, lies in a deep valley, and is well fortified. The country round it is tolerably cultivated, and better peopled. It is remarkable as the place where the allied sovereigns met upon a raft to adjust measures for their relative aggrandizements. Here I saw, for the first time, bad black bread ; and here, also, a sight that richly compensated the other, viz. the first ray of the sun since I had left Paris. At Weimar I first met with sledges. Hence, in disobedience to the injunctions of the police at Erfurth, to wait upon the Russian minister plenipotentiary, I set forward to Naumburg. The road was as wretched as the scenery delightful ; lying through fertile valleys, studded with villages in all the varieties of picturesque situation ; the dark lofty oaks, shadowing the pure surface of the snow, contrasting with the beauty of the close green fir. I could gain no reception into any house at Naumburg, but that of a poor shoemaker, which I did at the price of a glass of schnaps ; for a second glass he mended my shoes and gaiters, and provided me with a truss of straw, on which I slept soundly.

Next day, accompanied by a Jew, I reached Leipsic, passing through Lutzen. The misery and barrenness of the scene fairly vie with the celebrity of its name. Four trees were pointed out to me as the spot at which the Ex-Emperor commenced *his flight*. Lutzen formerly belonged to Saxony,

but is now attached to Prussia ; a sad change for the poor inhabitants, who complain bitterly of the exactions enforced by their new master. Nothing in the scene of Lutzen denotes the proximity of so celebrated a capital and court as Leipsic ; which, in my judgment, will bear no comparison with Frankfort, except in size. I walked round this city the following day ; but as I have nothing good to say of it, I will at least abstain from depreciating it.

Travelling over a low country, and by a bad road, I reached the large, dirty, and scattered town of Dueben, the first in Prussia Proper, and standing on the banks of the Salle. My reception was uncivil, if not inhuman. My passport demanded, myself interrogated by a set of whiskered ruffians, obliged to move from one guard to another, the object of sarcasm and official tyranny, I wanted no inducement, fatigued as I was, to proceed on my journey ; but even this was not permitted me. A large public room, full of military rubbish, and two long benches, serving as chairs to an equally long table, were the place and furniture allotted me. I asked the landlord for supper ; he laughed at me ; and, to my demand of a bed, grinningly pointed to the floor, and refused me even a portion of the straw which had been brought in for the soldiers. Of all the demons that have ever existed or been imagined in human shape, I thought the landlord of the inn the blackest. The figure of Gil Perez occurred to me, but it sunk in the comparison with the wretch then before me, for ill-nature and personal hideousness. His face half covered with a black beard and large bristly whiskers ; his stature below the common ; his head sunk between the shoulders, to make *room for the protuberance of his back ; his eyes buried in the ragged locks of his*

lank grisly hair ;—add to this a club-foot, and a voice which, on every attempt of speech, was like the shrieking of a screech-owl, and you have some faint idea of this mockery of a man. For some time he strutted about, wrapped up with furs, which ill concealed the ragged testimonials of his wretched poverty, and taking immense quantities of snuff. The oaf at length deliberately opened a large box, and placing in it a pillow and some straw, wrapped a blanket round him, and committed his person to this rude but novel species of bed, shutting the lid half way down with a piece of wood apparently kept for that purpose. I confess my indignation was so strongly excited, that, had materials been at hand, I had the strongest inclination to nail the monster down in his den. My feelings resolved into a determination to run all risks for an escape ; and accordingly, getting out at the window in the middle of the night, I took the road to Wittenberg, where I arrived at eight o'clock in the morning, after travelling over fifteen miles of sandy common, having previously crossed the Elbe by a large wooden bridge. The river is formidable, and the city fortified. Every step of the latter part of this journey stamps on my mind the recollection of the mild character of the Saxon, compared with that of the ruffian Prussian. From Wittenberg to Treuenbrizen is a good road, but a few villages and a forest of firs constitute all that is visible, except a large dirty market-town, which, however, provided me with clean straw, and, consequently, with a good bed.

Being now arrived in the land of turnpikes, where good roads and post-houses never fail, I started for Potsdam, distant thirty miles, and *arrived in the early part of the evening.* A flat

country, sterile and almost deserted, save by the sandy pine, presents little to denote the approach to this *royal retreat*. With infinite difficulty I obtained admittance to a house, content to purchase black bread for my supper, and the use of a bench for my bed. Of Potsdam I can only say, that the appearance is handsome, the royal edifices extensive, and many private ones magnificent; but so great an air of melancholy pervades the place, that it seems a fitter residence for the dead than the living;—I had the less regret at bidding it adieu.

A fine avenue of trees and a good road conducted me to Berlin; nor could the fertile imagination of a Humboldt discover aught else to denote the approach to the capital of his own country. For myself, I perambulated the streets nearly the whole of the night in search of a lodging, and was at last compelled to sleep on a bench in the Promenade. Next morning I waited upon his Excellency Mr Rose, the British Minister, whom I found fully aware of the character of Berlin and its inhabitants. He was so good as to send one of his coachmen with me, and through so powerful an interference, I did at length get a *comfortable unfurnished room in the capital of Prussia*. It should, however, be observed, that the minister had offered me a room in his hotel, which my own independent plan, joined to a fear of incommoding his excellency, induced me to decline.

During my stay in Berlin, I had the honour of an invitation to a grand dinner given to the minister of Prussia and the foreign ambassadors, at which princes, counts, and dignitaries, down even to the pedestrian traveller, were present. The dinner and wines were considered the best and choicest; but *I would have preferred a plain joint*

and vegetables, to all their unmeaning nothings of made dishes, puffed cakes, &c. His excellency asked me why I did not eat; I replied, I had seen nothing to partake of, at least nothing to satisfy a hungry traveller. His excellency pardoned my honest boldness, and sent down a cold roast turkey and ham. Of these I had no difficulty in making a good dinner, and felt sensibly his excellency's kind consideration. His excellency the Russian ambassador had the goodness to present me with blank passports for whatever route I might prefer; an attention on his part, becoming the representative of his illustrious master. The young prince Labanoff was also of the party, whom I gratefully particularize as the kind facilitator of my journey to St Petersburg.

Berlin is seated on the Spree, which runs through various angles of the city. Many parts of it are handsomely built, especially what may be termed the court end; but every building, from the palace to the meanest hut, is built of brick, plastered over. In short, Berlin is all show—a forced place, having little commerce, and less content; no smiling faces—no mediocrity, that happiest of all conditions. Berlin contains nothing but the most hardened military despots, and is, in short, a mere court, though it contains two hundred thousand inhabitants. I saw no modes of gaining a livelihood, or even of passing time honestly. Billiards, cards, and dice, succeed to the spectacle of the parade, and the streets present nothing but sentinels on guard.

Though a pedestrian, I was the first bearer of the information of the Duke de Berri's death, a full month's post being due at Berlin, owing to the immense quantity of snow.

CHAPTER II.

Angermunde—Stettin—Corben—Cosben—Romini—Zanow—Schlawes—Lauenburg—Neustadt—Dantzic—Königsberg—Curisch Haff—Memel—Prolangen—Mittau—Riga—Dorpat—Narva—Yamberg—Kipene—St Petersburg.

THE road from Berlin to Stettin is over a bleak and uncultivated country, where neither wood nor water, and but few people, are to be met with. The first night I put up at an old town called Bernau, which threatens every day to fall on the heads of its inhabitants. Next day I reached Angermunde, having previously passed through Neustadt, where I had the comfort of dining upon pork, pease-pudding, and good beer. On the road are many small villages, inhabited by wood-cutters, which afforded strong proof of the high state of perfection to which the training of dogs may be brought, each of these animals drawing a considerable load of billet-wood.

In Angermunde, which is a considerable town, with a large inn, I found no improvement in the Prussian character. I had stopped in the forenoon for refreshment at a little public-house, where a carriage had previously halted; and, entering the tap, demanded some beer, bread, and cheese. The owner of the carriage was partaking of the same fare—good white bread and a bottle of ale. While

I was enjoying, in fact, my companionship in these delirious, the landlord set down before me certainly the worst bread and dirtiest beer I had ever seen. On my requesting to be placed on the same footing, he simply replied that those already before me were far too good, and that if I did not eat them I might go without: and, suiting the word to the sentiment, he immediately carried them away. Not could any thing induce the brute either to return these or sell me better, until my considerate fellow-traveller called, as for himself, for a fresh loaf and a bottle of ale, and, presenting them to me, expressed his regret that I should have been so insulted in the necessitous condition in which I appeared. I accepted his kind offer, and then discovered that he was not a Prussian but a Pole.

I departed with the intention of reaching Stettin that night. The road was lined with horse-patrol, ostensibly to prevent smuggling; but, in reality, to examine travellers and their papers. At five in the evening I came in sight of the ocean, and, in the midst of much fatigue, felt refreshed by the reflection that I was nearing a seaport. I passed the drawbridge at half past eight, just in time to prevent being locked out—a circumstance of near concernment to me, after forty miles of heavy and dreary walking.

Stettin played me the same trick as Berlin. I in vain demanded a night's lodging at three different houses, though I had previously ordered and eaten of as many suppers for that express inducement. I then retreated to the wharf, cold and snowy as it was, when chance threw me in the way of a brother tar; with generous humanity he roused me from the ground, on which I was lying,

nor did he leave me until, at past midnight, he had succeeded in inducing the landlord of the Copenhagen Inn to receive me, on condition that my passport should be deposited in his hands as a security. A bed was provided me, and I soon drowned in sleep the memory of the country I was in, and the cares and fatigues I had undergone in reaching it.

Next morning I arose refreshed, and, in company of an honest Swede, waited upon his Excellency Mr Lutzen, the British consul, to whom I presented a recommendatory note from Mr Rose, who had given that very Mr L. his situation. The reception I met with was barely decent at the time, and, on the following day, an invitation was transmitted to "the English gentleman," to dine at his country seat. I confess I could not but regret that no Englishman should be found better qualified to do justice to my countrymen.

Stettin, on the left bank of the Oder, is a strong and commanding position. Many opulent and respectable merchants reside in it, who carry on an advantageous trade during the early part of the summer. No vessel of considerable burden can reach the city ; they are loaded thirty miles to the northward, at a place called Swinnerman, between which and Stettin is a large lake, at this season an entire sheet of ice. The town is said to contain twenty-two thousand inhabitants. It is the residence, or rather the lunatic asylum, of the dowager Princess, mother of the late Duchess of York. Her Highness is well treated, having also the use of a country residence.

Having refused Mr Lutzen's hospitality, I took the road to Dantzic, over pasture land, and reached Golnow, *a large scattered town with a good*

inn and civil landlord. A fair had been held for the last three days, and much bustle still prevailed; after a comfortable refreshment I set forward, and reached Newgard and Pinnow the following day, amid snow, wind, and rain. Corben and Cosben, two miserable places, in a swampy situation, next brought me up, having several times missed my road, and sometimes with but little hope of recovering it. One of these instances occurred in an attempt to cross a frozen lake. Fortunately the water was not so deep as to prevent my reaching the opposite shore. I then determined to steer one course till I made a land fall, which I was enabled to do by keeping right before the wind. It was now three o'clock, when a person whom I met informed me I had come but sixteen miles instead of thirty;—took a fresh departure, with good advice, and at last did well. Thus much for quitting the high road to make a short cut, which a pedestrian should never do, except under a certainty of being right.

A post-house called Romini, with a good civil landlord, better wife, and seven well-behaved children, made me welcome, dried my clothes, and gave me a glass of schnaps to keep me warm, while a good supper of beef and potatoes was preparing for me. Cold, wet, weary, and half-famished, I had entered the benevolent post-house; but one short hour restored me to life and good humour, and ultimately to the enjoyment of a clean bed, made on the spot for my accommodation, by filling a tick with hay, and sewing it up again. Happy, contented, though impoverished family, would to Heaven that benevolence like yours had more numerous followers among mankind! The *whole property* of this family could not have been

worth ten pounds. I had arrived in a most miserable plight, the heavy and frequent rains having dilapidated my apparel, which, even in good weather, was not calculated to last long. My cap I had lost in the icy swamp, and, in default, my head was bound up with a piece of red flannel. My trousers were literally torn to tatters; my shoes tied to my feet, to prevent their falling off; my shirt, except a flannel one, and waistcoat, both superseded by my outer jacket. All I had retained was sound health and a contented mind, and I wanted no more; for this generous family had, during the night, put my entire wardrobe to rights; and I departed the following morning with sound clothing, and reflections of heartfelt gratitude to have met with the beneficial exercise of such qualities, in a quarter of the world where I had so little reason to expect them.

Over an execrable road, sandy heath, and in cheerless wintry weather, I resumed my route, and reached Zanow, on the banks of the little river Coslin. Here again I found a lodging in a cobbler's stall—it could scarcely be termed a room, being about nine feet square. An old bedstead and straw mattress served for him and his grandson in one corner; in the second was a fire place, but no fire; in the third, a cupboard with an empty glass and two or three broken plates; and, in the fourth, a board for his journeymen to work upon when he had business to employ them, which now served for my bed-place. In this state I passed the night, charmed with the contentment of old Crispin, whose whole happiness seemed wrapped up in the future welfare of his grandson. I was provided with some straw and a horse rug, which, however they might assimilate *me to the inhabitants of a stable*, were

truly acceptable ; for the night was cold, and the windows, which transmitted the light only through oiled paper, could not prevent the sensible intrusion of the cold air.

Next morning, in spite of the obstacle of a sprained ankle, I pushed on towards Schlaws, where I was taken before the magistrates, to answer the offence of smoking in the streets. My ignorance of the law, and my very palpable poverty, alone saved me from a fine. In the evening I reached Skolpe, over thirty-five miles of bad road. The police supplied me with quarters at the guard-house ; a circumstance rendered almost necessary to me, from the unaccountable, but manifest ill-will of the women towards me. The ill-fated Ledyard, had he been situated as I have often been, would have allowed exceptions to his beautiful encomium upon the benevolence of the fair sex. But Ledyard's fortune in this respect was better, and he was justified, by his own experience, in espousing the cause of the whole sex.

At the guard-house I entertained the people with the history of my travels, past, present, and to come, and so greatly were they interested by the recital, that they actually strove to lay me under a promise of not going beyond St Petersburg. They urged upon me their own habits and feelings so strongly indicative of contentment, and even proposed to me to take a farm among them ; but, from many reasons, I felt little disposed to adopt the suggestion.

Lauenburg next day became my halting-place, after twenty-seven miles' march ; the country becoming better cultivated and more peopled than of late. I endured much from the bad condition *of my shoes*, which the variations of weather made

ately like sponge and horn. I repaired the
 lief as well as possible with spirits and tallow,
 nly resource I had, for my finances were not
 condition to allow me a new pair. I reached
 tadt (eighteen miles,) almost sinking under
 and fatigue. From hence the country assumes
 y picturesque appearance ; it bears, however,
 perately bad name, from the bands of robbers
 nfest it. For myself, I was so far from ap-
 nsion on this point, that I laid my account
 having my necessities mitigated by their
 s. The people, however, were civil and ob-

ow started for Dantzic, distant about thirty-
 miles ; at about the tenth I was overtaken
 e post-coach, and bargained for a conveyance
 tree francs. This wretched vehicle, which
 not merit the name even of a waggon, pro-
 s to accommodate nine passengers. It has
 benches—the two back ones looking toward
 front, the centre bench without a back ; be-
 the hindermost seat is the depository of the
 ge, amounting to about one-third of the
 e machine. It goes upon four wheels, each
 ng on a strong axle-tree, and is without any
 of spring whatever. The *tout ensemble* is pro-
 more like a show-cart than any thing else.
 its mortal contents, two were well-dressed
 g men, connected with the commerce of Dant-
 a young nobleman about to join his regiment,
 rform his regulated quota of a year's service ;
 dashing females, setting their caps at the two
 hants—(these were bound to Dantzic or
 gsberg, to open the season as the ice breaks
 id ships arrive, then to return to Berlin, un-
 he *auspices of Madame B.*); a sergeant of the

royal guard, having the charge of a priest, either banished or under arrest, for what offence I could not learn; they both appeared decent, well-behaved men. The eighth was a young Saxon Jew, from Leipsic, bound to Riga and St Petersburg. His person was rendered remarkable by his long white soft flaxen hair, and white eyelashes and eyebrows. He seemed about twenty, not deficient in common sense, although the company were much inclined to make him their butt. In this vehicle and this society I reached Dantzic, to my no small satisfaction; for surely no pretence of a conveyance ever yet put forth by man, can be compared with a Prussian post-coach. Just fifteen hours were consumed in going thirty-two miles.

The following morning I paid my respects to Mr Gibson, the British consul, who received me with his well-known cordiality and friendship. I dined with him; the intervening time being employed in walking about the city as much as the afflicted state of my feet would allow.

Dantzic is so well-known a place that I shall not enter on any description of it here. It was formerly a free city. Its immense fortifications, which require an army of thirty thousand men to defend them, and the numerous sieges it has undergone, have given it a high and deserved reputation. Its present population is forty-five thousand, all now in allegiance to the King of Prussia.

Though several inducements were held out to me to remain here, I stayed only long enough to view a painting in the Exchange, which is deserving of notice, and another, with a fine piece of sculpture, in the Cathedral. In the first, a boat is represented in the act of crossing the river Styx; *and several persons, at that time residents of Dant-*

zic, are portrayed as the passengers, the burgomaster and his daughter being particularly conspicuous. The story, however, says, that the natural anger of the parties thus libelled was appeased by the painter's consenting to add his own portrait to those already in the boat. The picture was then hung up in the Exchange; but the crafty artist contriving to gain admittance during the night, added to the figures that of an angel with a boat-hook stopping the boat, presumably in consequence of the painter's being in it. The burgomaster could not disguise his vexation, though the offence was thus neutralized; but the picture was suffered to remain.

The other painting, for which the Emperor Alexander is said to have offered twenty-five thousand guineas (query, roubles?) is a representation of the Last Day. It is said to be one of the most ancient, as well as finest specimens extant, and is the property of the city, who cannot alienate it. The sculpture, by Michael Angelo, of the Crucifixion, is said to have been done from the observations of real suffering, the artist having crucified and stabbed a boy expressly for that purpose.

With a strong pair of English shoes, the present of my friend, Mr Marshal, I departed, passing the range of fortified hills on the right, and the port of Dantzic with its shipping on the left. I now entered a well-cultivated country, passed the neat little town of Dnishaw, crossing the Vistula by a well-managed ferry. Thence to Marienberg, so celebrated for its castle, which I had no opportunity of seeing, as it was at that time undergoing repair. The following day I reached Elbing, over twenty miles, of low, cultivated country. It appeared a pretty town, *having a good export trade by ves-*

sels, which, though at fifty miles' distance, from the sea, come up even to the city walls. The third day I reached Königsberg (thirty-five miles), extremely tired. Although a walled, it is not a fortified city; but contains sixty thousand inhabitants, and is certainly the second city in Prussia. The trade is considerable, though checked by the shallowness of the navigation, which obliges vessels of burden to load and unload their cargoes at Pillau. The privileges granted it by the present sovereign have, however, in some considerable degree, lightened the inconvenience.

My journey to Memel was over a cultivated country, until I got to the Curisch Haff, which I reached with some difficulty, having several times lost my way, and generally by misdirections. After a direct progress of only ten miles, an old woman (now, Ledyard, thou art right!) took pity upon me, and I passed the night comfortably under her roof. A good hot supper, with a drop of my landlady's cordial, so exhilarated me as to induce me to join a group of dancers, who were thus commemorating Good Friday, as well as celebrating a marriage, which had taken place that day between a young fisherman and the "maid of the inn." I had the honour of waltzing with the bride, a fine buxom girl of nineteen.

I hesitated a little, next morning, upon the advice of an old sailor, to stop at the village till the Haff broke up, when I might get a passage to Memel by water, free. The old tar had offered to find me in provisions for the consideration of my assistance, in the meantime, in hauling the net. Perhaps, under circumstances, I might have acceded, if I could have relied on the security; but *fearing this*, I resolved to attempt the crossing of

the Haff towards Krantz. I was, however, at the risk of my life, compelled to return, and only late at night reached a large fishing-village, called Jackaw. From thence, next day, along a sandy beach, with a sun which, even in this season and climate, enabled me to light my pipe by my spectacles, I got to a neat post-house at Nidden, situated in the midst of sand-hills.

A young recruit bound to Memel had been my companion the previous day. In the evening a few fishermen also going to Memel, offered us a passage in their boat ; my companion consented on the instant, and, late and cold as it was, we embarked. The wind was fair, and we had but thirty-five miles to go. The crew consisted of two men and a woman, all three of whom laboured at the oar until midnight, when, having passed the village of Swat-sash, the boat encountered the ice, at a narrow part of the Haff, and, in the severity of the frost and the extreme darkness, we became completely blocked up. In this exigency, to give more room, the young recruit and I were obliged to quit. He, poor fellow ! had been enjoying a sound sleep, wrapped up in great-coats ; to him, therefore, this reverse seemed severer than to me. For myself, I felt aware of the impropriety of resuming the journey at that hour, hungry and fatigued as we were. But what was to be done ? Return I would not, although a village was within two miles of us ; yet to proceed was impossible, from our ignorance of the way, and the darkness of the night. We were also quite destitute of bread, tobacco, or schnaps, and my knapsack was in charge of the young Saxon, who had agreed to take it to Memel for me. I felt as if completely undone. Putting, however, a good face upon it, I took off my shoes, hat,

and jacket ; and taking a spare flannel waistcoat and drawers, which I had fortunately retained in a bundle, with a dry pair of worsted stockings, with this I made myself a bed, putting my feet into my hat, and pointing them towards the wind, and my shoes under my head for a pillow ; then lying down and drawing my jacket over my shoulders, I slept very soundly ; although, upon awaking next morning, I was both wet and stiff, yet after taking some strong exercise backwards and forwards, I recovered the use of my limbs and my health.

The recruit had not slept at all, but lay bemoaning his hard fate, which, indeed, was sufficiently severe ; his tight pantaloons, military boots, and tighter coat, exposing him much more than myself to the inclemency of the weather. As he was too obstinate to take my advice, or follow my example, all I could do was to pity him, and rouse him to take some violent exercise. This in some degree recovered him, and we moved on towards Memel, crossing the isthmus, and following the northern path. By seven in the morning we reached a tavern on the summit of a hill, which overlooks the city, and here I was obliged to leave him, in a state of fever. Upon my gaining the beach, it appeared doubtful whether the ferry-boat could attempt the passage or not, there being a heavy gale, and the ice driving with great velocity ; I, however, persevered, and was safely landed in Memel, in time to partake of a good dinner at the Sun Inn.

Memel is a highly respectable, convenient, commercial town. The harbour is small and secure. A good theatre, large church, public hospital, and a palace, are its principal buildings. Its trade *would be much* more considerable, were it not for

the monopolies and privileges granted to its rival Königsberg. Its exports and imports (the same commodities as in other Prussian towns) are mostly in the hands of Polish Jews, the merchants having little cordiality with each other. The contraband trade with Russia was formerly considerable, but heavy losses and heavier punishments seem to have subdued this spirit of speculation. I received great marks of kindness from its inhabitants, who even expostulated with me on my seemingly unhappy mode of life. If happiness, however, be the one pursuit in this world, it may admit of question whether a traveller does not attain a greater portion of it than most others; certainly more than those who languish on the lap of ease, and who, in one shape or other, feel the tortures of anxiety, though surrounded by all the luxuries which affluence can procure.

The Saxon having arrived with my knapsack, I departed, in company with a real friend, in the person of Mr Robson, who kindly gave me a seat in his carriage, as far as our road lay together. At thirteen versts we reached the frontier, at a small Russian town called Polangen. A police office, guard-house, and custom-house are established here. Our passports were backed for a silver rouble, and the same sum saved our baggage from a rude and useless search. The manifest advantage to the traveller in the regulations on the frontier, no less than the presence of Cossacks, served to remind me that I had entered the Russian empire.

The road to Liebau is generally through a sandy forest of pines, the trees of which were torn up by the roots, or bent double, by the effects of late gales, rendering the road difficult to pass. From Liebau we continued *our route* with post-horses,

harnessed in a teelega, a vehicle peculiar to Russia, and which certainly may remain so, being constructed on a model from which no other nation would desire to copy. It is sufficiently easy of description, being, in short, just the shape of a baker's trough, with open railings for the sides. It is long enough to lounge or even lie down in, and filled, as it is generally, with hay, is really no very unpleasant vehicle: the absence of springs being in some measure counterbalanced by the breadth of the axletrees and the smallness of the wheels; which, while it lessens the chance of overturning, renders the danger, in such an event, less imminent. Our route to Mittau was performed agreeably, and my friend did the honours as became one in his situation in life. The scenery was not devoid of interest, the country being well cultivated and tolerably wooded, though stragglingly inhabited.

Mittau, the ancient capital of Courland, has not much appearance of a city, though it seems to have been well built. The royal, or rather imperial, palaces, are extensive ranges of building converted to one use, all still in an unfinished state. We were detained some time by the ice in the river Aa, and nothing but an extra rouble could have passed us across. We had then to walk three miles to reach the post-house; here my friend, whose weight did not admit of his moving with the same velocity or ease as myself, was knocked up, and we halted for the night, receiving every civility and attention.

The banks of the Dwina and the city of Riga hove in sight the next day, and we reached the latter at noon. The history and description of this *ancient city* are well known. The emperor ap-

years much attached to it, and has honoured the British consul, a gentleman and merchant, esteemed and respected by all classes, with particular marks of his consideration; having even condescended to accept apartments in his beautiful mansion. During the late invasion by Napoleon, the suburbs were burnt by order of the governor, on what authority I know not; but he preferred suicide to the survival of his honour, or the result of a court-martial. New edifices are now erecting on the site of the old suburbs, which bid fair to become the most beautiful part of the city. A magnificent view of the city, with the surrounding country highly cultivated, is commanded from the top of the Livonian steeple, three hundred feet high. Quitting Riga, still in company with Mr Robson, I continued in the same easy carriage, and over the same execrable sandy road, to Woolmar; the country thinly peopled and less cultivated. Here, to my extreme regret, and with a deep impression of his kindness, my friend and I parted, our routes lying at right angles. I was now, for the first time, alone in Russia, and my reflections on the circumstance were rather of a melancholy cast. At Stackeln I overtook the St Petersburg waggon, but its pace was too slow to induce my joining company; otherwise I would gladly have availed myself of it both for guidance and protection. I therefore pushed on, and soon reached the considerable village of Gulbèn; and next day, at Udin, I first trode Russian snow, proving that I had travelled faster than the seasons, as, though winter had passed me in the middle, I found it still lingering in the northern boundary of Europe.

The inhabitants hitherto appeared civil, and less

phlegmatic than the Germans; although an exception to this character had the knavery to make off with a pipe, a pound of tobacco, and the pair of shoes which I had received from Mr Marshal. Such things once lost, there is but little hope of their recovery; I therefore made no complaint. Reached Dorpat considerably fatigued, having walked forty miles from Teylitz. Upon my arrival it began to rain hard. I procured with difficulty a lodging in the entrance of a tallow-chandler's shop; at least such I judged it from the nature of its effluvia.

Dorpat is a beautiful little city, with an university; and bids fair, for its regularity and cleanliness, to vie with Nancy in France. It stands upon the right bank of the Embur. Handsome edifices with an imperial palace; wide, clean, and regular streets; a beautiful stone bridge, in a picturesque and fertile country, with its local situation between two lakes, bespeak its important rank, independently of its antiquity.

On the following day I reached Nennal. I observed on my route none but ugly women and long-bearded men; a sterile country, and yet to me a costly one, for I was obliged to pay a silver rouble for a coffee-breakfast, a charge I shall take care never to incur again, as not suiting the state of my finances. In spite of the approach of spring the weather seemed to increase in coldness, and some snow fell; but my anxiety induced me to push for Narva, where I arrived in time to breakfast. The road relieved only with imperial post-houses.

Narva, a considerable town, and the first in the government of St Petersburg, possesses massive remains of an ancient fortress, built by Ivan Vasilich the Great, overhanging the perpendicular

banks of the Narova. It carries too much of a military air for me to particularize.

When on the point of resuming my journey, I was accosted by a black gentleman, who, as he informed me, was a resident and retired merchant of St Petersburg. Understanding that I was a foreigner, he entered into many inquiries with me, of my rank, country, the object of my travels, and my reason for pursuing them on foot. To these questions I replied; and to the last simply observed, that I was in the habit of travelling on foot, and that indeed I could not afford to see the world in any more convenient manner. He expressed his regret that a man of *my merit* had not been better rewarded by fortune, and his satisfaction, at the same time, that he had it in his power to offer me a lift, even to the capital of Russia, having two carriages empty; and though he was prevented by an affair of importance from resuming the journey that day, I accepted the offer, and agreed to wait his pleasure, rejoiced at the opportunity afforded me of entering the imperial capital in style, with less expense and still less fatigue. In the meantime we eat and drank freely at his charge; and, not to appear backward, I ordered for myself the luxury of a proper bedroom, where I slept well.

I learnt next morning that the important business which had detained my friend, was neither more nor less than an intrigue with a rosy-cheeked chambermaid. This being dispatched, we departed; he in the first and I in the second carriage, each drawn by four horses. I had a specific charge from him to use no ceremony in abusing the coachman, if he should slacken in his driving. I soon forgot this admonition in a sound

sleep, for which, by the by, I afterwards got a severe reprimand.

We passed through Yamberg, an imperial residence in a ruinous state; when the Gulf of Finland, opening to our view, presented to us an immense mass of ice, studded with little snowy hillocks, but without a single vessel over its whole surface.

We reached Kipene the next evening, where we halted for post-horses. The country had been a low overflowed desert. The weather was cold; and I was reminded by my feelings that we had reached about the latitude of 60°. My companion, having again treated me with supper and bed, left me for the night, evidently a little nettled at his ill success in engaging the affections of a little Russian girl, who had waited on us at table.

While at breakfast next morning, and just as the horses were announced, my companion asked me whether I was furnished with a passport. I replied in the affirmative. He requested to see it; and, observing my name, inquired if I was related to "Admiral *Kakran*, who was in de West Indies, at de capture of de Danish Islands in 1807?" Being informed I was the admiral's nephew, he asked, "Are you the son of Massa *Kakran Jahnstone*?"—"Yes, I am."—"You are, den," said he, "dat lilly Massa Jonny I know at de same time." It now turned out that this black gentleman, with the two carriages and four horses each, had been my father's and my uncle's servant thirteen years before. Having talked over old matters, he remarked that he could never have recognised me, from the alteration that time had made in my features; observing that I seemed to have verified *the West Indian* proverb, "Like the black man's

pig, *very lilly, but dam old.*" I acknowledged the justice of the remark, and proceeded to inquire his history; but as he did not seem inclined to be communicative on this head, I did not press him; and we proceeded—both in the same carriage, my friend no longer considering me as a *menial follower*.

At noon, on the 30th of April, I reached St Petersburg, having been eighty-three days from London in performing a distance of sixteen hundred miles, an average of nearly twenty miles a-day. My sable friend, at parting, declined to give me his address. I suppressed my chagrin; but felt an increased curiosity to learn the source of his wealth and his situation in life.

The following morning I was relating the adventure at a friend's house, where Doctor Ryan (the medical attendant of the young Prince Labanoff's family, with whom I had dined at the house of Mr Rose, in Berlin) was present. He was mentioning that the young prince, being on the road from Petersburg to Berlin, had been overtaken by winter in his summer carriage; and, as the latter season was near at hand, had sent his black servant to Narva, to bring his carriages to the capital. Fortune's frolic was now explained; my wealthy, dashing, overbearing, and intriguing companion, being no more than the very humble attendant of his highness.

Having once got settled in a comfortable lodging, my first duty was to call upon Sir Daniel Bailey, the British consul-general, then the only representative of the British court; Lord Cathcart having quitted St Petersburg, and Mr Casamajor deceased. In Sir Daniel I found, not only a sincere friend, but an able advocate for the plans I had in

view. Through his means I transmitted a memorial to Count Nesselrode, the foreign minister, who handed it to Count Kotchoubey for the approbation of his Imperial Majesty. The memorial contained a request that I might be permitted to pass through the Russian empire, on my way to America, either by Kamtchatka, or Behring's Straits. I also solicited a sealed mandate from the Emperor, with an order to all governors and persons in authority to assist me to the utmost of their power; besides an open order to the police, not to interfere with or molest me. I requested, in addition, an especial letter to the governor-general of Siberia.

I had been given to understand that his Imperial Majesty had no objections to my proceeding upon my journey, although he expressed a belief that, when I should be furnished with the required documents, I should flinch from my purpose. I soon, however, satisfied the minister upon this point, by declaring I would be ready to set out at half an hour's notice. In the meantime, the intendant-general of police gave me three audiences, examining me as to my rank and condition, my plan and its object, with the *et cetera* of interrogatories, administered by persons in official situations when desirous of extracting information beyond the avowed object.

His excellency at length promised me his assistance, and recommended me to Count Kotchoubey, into whose hands my business had entirely fallen. The count also gave me three audiences, repeating the same interrogatories as the intendant. Finding, however, that I adhered to one *simple story*—stating, as my object, a wish to *employ, improve, and amuse myself, at the same time*

rendering to society all the service of which I was capable—his excellency also dismissed me with favour; and through his interference, sanctioned by the generosity and noble-mindedness of the Emperor, I procured even more than I had expected or demanded. His Imperial Majesty had also the consideration to ask Colonel Cathcart, who had recently arrived as successor to Mr Casamajor, whether I wanted money, and how much, to enable me to start. I replied in the negative, expressing, very truly, my surprise and gratitude at the offer. I was, moreover, instructed, in case of such necessity, to apply to the respective governors at the places I should pass.

That this unsolicited munificence, on the part of the Emperor, could only have sprung from the generous feelings of his heart, and was not adopted as a *façon de parler*, is clear, from the fact that his Imperial majesty did afterwards request of Sir Charles Bagot to be informed whether I really needed money, accompanied with an intimation, that, in such case, I should be supplied from the imperial treasury. I think I do no wrong to any one, in believing that no other crowned head in Europe would have given itself any concern about me, or my affairs, or have taken any notice of a stranger presenting himself, without any recommendation of any weight, with the single exception of a private letter of introduction to Sir Robert Kerr Porter.

Among other intimations made to me, as from the Emperor, was one which, I believe, originated with the directors of the Russian American company: it was in the shape of a request that I should refrain from *making any inquiries* respecting the *affairs of the said company*. Coming through a

public channel, I of course considered it my duty to promise a compliance with the request, though it appeared to me singular that the Russian company should have for one moment suspected me of ill-will towards them, or of being employed as a spy on their affairs. It is, however, certain that they had some apprehension of this sort ; as they not only threw obstructions in my way to the Emperor, but after offering and promising me letters of recommendation to their different settlements and chancellories, refused them, upon the plea that they were useless, from my ignorance of the Russian language. Whether Mr Crammer, their director, from whom this unlooked-for and unbaneful some treatment emanated, believed that Russian civility should be limited to those who understood the language, I know not ; if he did, every considerate person must perceive that the less I understood of the manners, language, and customs of any foreign country, the more I actually stood in need of assistance in it. Were the company conscious that their affairs required secrecy, their harsh conduct towards me was certainly the least likely mode of binding me to their interests, or of securing the fulfilment of any promise they might obligate me to make, beyond those confined to ocular demonstration and strict neutrality of speech.

During my three weeks stay in St Petersburg I was most hospitably received by several respectable British merchants. I employed the spare time in walking about the capital and viewing its wonders ; and although I abandon the description of them, as a task beyond my power, I cannot help saying, that no city I have seen can equal *in external magnificence*. Large, straight, and *parallel streets*, noble public buildings in eve

style of architecture, numerous imperial and private palaces, handsome pavements for carriages and foot passengers, several beautiful canals running round and through the city, and carrying away every offensive matter, the perfect cleanliness in every part, its immense number of churches, and lastly, its magnificent river washing the finest quays in Europe;—these are only the more striking features of St Petersburg. The bustle in most of the principal streets, and the number of vehicles of various descriptions, add to its importance. It is, however, a little too stiffened with a military air, being everywhere crowded with soldiers and police officers, and the daily parades are better attended than the workshops and manufactories. Nor is this tendency surprising, when it is considered that, in one short war, Russia has arisen from comparative insignificance, to rank as the third, if not the second military power in Europe. It may indeed be objected that her advances are too rapid for her age; but this point I leave for discussion to those who have not before them a journey of eight or ten thousand miles, for which I have not a single hour to make preparation.

CHAPTER III.

St Petersburg—Tzarsko Selo—Tosna—Novgorod—Zeit-
zova—Yedrova—Vishney-Volotchok—Torjock—Tver
—Davidova—Moscow—Vladimir—Dratchevo—Pogost
—Pavlovo—Nishney Novgorod.

I WAS now furnished with all the documents which I had deemed necessary. They consisted of the following: The customary passport, with the substitution of the minister's for the governor-general's signature; a secret letter to the governor-general of Siberia; and two official documents which I shall give at length.

The first of these (addressed—"To all civil governors," and signed by the minister of the interior) states, that "The bearer hereof, Captain John Cochrane, of the British royal navy, purposing to travel through Russia on foot, is now on his departure for Kamtchatka, with the intention of penetrating from thence to America.

"Having, by the command of his Imperial Majesty, provided this traveller with open instructions to the police of all the towns and provinces lying in his track from St Petersburg to Kamtchatka, this is also to desire all the chiefs of the different governments through which he may travel, to aid Captain Cochrane, as far as possible

to proceed on his journey without interruption, as well as to afford him lawful defence and protection, in case it should be desired."

The other was an "open order of his Imperial Majesty Alexander the First, Autocrat of all the Russias," &c. &c. &c. signed by the same minister, and stating, that "The bearer hereof, Captain John Cochrane, of his Britannic Majesty's royal navy, having undertaken to travel on foot through the Russian empire, is now on his way to Kamtchatka, intending from thence to pass over to America. The police of the towns and provinces lying in his track from St Petersburg to Kamtchatka, are, in consequence hereof, not only forbidden to obstruct Captain Cochrane in his journey, but are moreover commanded, in case of necessity, to afford him every possible assistance."

I quitted the hospitable habitation of Sir Robert Kerr Porter, on the 24th of May; and, having had a lift in the carriage with four horses of Sir Robert, I, with my knapsack on my back, set out, and trotted over a partially cultivated country. A pretty avenue of birch trees lined the road, as if to accompany me as far as possible on my departure from the precincts of civilized man. Nature here got the better of a tolerably stout heart; and, as I turned round to catch a last glimpse of the capital I had left, and of the friends to whom I had bade, perhaps, a last adieu, I could not suppress my grief, and, had not my honour been committed, should certainly have returned. A sigh escaped me as I ejaculated a last farewell, till, startling at the expression of my weakness, I resumed my journey with slow and melancholy steps.

It was ten o'clock, (for I had now a watch),

and I had reached six miles. The night was beautifully clear, though rather cold from the effects of a northern breeze; while the moon was near her full. I looked at the beautiful lumina and actually asked myself whether I were, as I had been asserted, under the baneful influence of the planet. Smiling that I received no reply, I then considered my projects and intentions, and the conduct I ought to follow; and, sitting down at a fountain on the Poulkousky hill, I read to myself a few lessons, which the time and the occasion seemed to inspire. "Go," said I, "and war with the illiterate and almost brutal savage!—and be the companion of the ferocious beast!—and contemplate the human being in every element and climate, whether civilized or savage—whatever tribe, nation, or religion. Make allowance for the rusticity of their manners; be tempted to cope with them in those taunts, insults, and rudeness, to which the nature of thy enterprise will subject thee. Contemn those incidental circumstances which but too often surround mankind from their good intentions, and deprive the world of much useful and interesting information. Avoid all political and military topics, remember, that

The proper study of mankind is man.

Should robbers attack thee, do not, by a feeble resistance, endanger thy life. Man may be hardened by crimes, and persist in the practice of them, till, meeting with resistance, he will be provoked to murder; but man is still a humane being even while seeking his subsistence by rapine and plunder; and seldom, from mere wantonness, he spill the blood of his fellow-creature.

only by patience, perseverance, and humility, by reducing thyself to the lowest level of mankind, that thou canst expect to pass through the ordeal with either safety or satisfaction." Something like these were my self-dictated precepts, and I pledged their performance in a draught from the cool and limpid fountain.

In company with some carters I resumed my journey; and depositing my knapsack in one of their vehicles, entered into conversation as well as my scanty knowledge of German would allow me.

As we proceeded, there suddenly rose to the south-east a tremendous blaze, the cause of which it seemed difficult to conjecture. At first I imagined it might be, as I had often seen in England, a blazing bonfire, with a group of mirthful rustics revelling round it. But the scene grew soon too terrific to allow of so simple a solution, the flame rising to a prodigious height, and the smoke rolling into a beautiful dark arch on the clear sky. Immense masses of fire, and sparks at intervals, exploded and separated like a rocket.

We continued to gaze as we advanced, till, on reaching the beautiful town of Tzarsko Selo, the source was indeed but too apparent; it was the Emperor's favourite palace wrapped in an extinguishable flame. I had looked forward with hope to enjoy the survey of so celebrated an edifice, and had actually taken a letter of recommendation to Prince Theodore Galitzin, one of its principal inhabitants, that I might with the more facility have my desire gratified. It was midnight; parties of men surrounded the wasting pile. All, however, was order and regularity; not a voice was heard amid *the thousands* of people employed.

The Emperor was present, evidently impregnated with extreme regret, and all appeared powerful to partake the sentiment. His Majesty, however, continued to give frequent directions with perfect coolness.

Tzarsko Selo was the palace in which the Emperor and his brother Constantine had been brought up, and passed their earlier years; it was known also that the Emperor was accustomed to retire when the cares of state permitted him, to repose among its beauties the anxieties of a throne amidst the toils of so great a government. It had been greatly embellished by his Majesty, and was considered one of the most beautiful retreats in Europe. Years of time, and millions of money, I think must be expended, to make it what it was yesterday morning.

Being excessively fatigued, and finding my individual exertions perfectly useless towards checking the progress of the flames, I retired to the cellars, where I passed a couple of restless hours on a bed of moss, amid herbs and flowers, and sweet perfumes were as yet unvanquished by fire or smoke. Some demon seemed to hover round me, and my dreams presented the probable accidents of my journey, in all the horrors which imagination could shadow forth. I arose, and turned to the scene of devastation, now evidently increasing, and appearing to defy the human engines pouring upon it from all sides.

The dome of the church fell with a tremendous crash; and such was the immense mass of earth that fell with it, and so great the force of the rebound, that in its second descent, and assisted by the wind, it set fire to two other parts of the palace, until then considered safe. At this crisis

moment his Imperial Majesty gave a strong proof of steady collectedness. While the fire was raging from apartment to apartment, apparently mocking the resistance of man, the Emperor gave direction that the doors should be walled up with bricks. This was instantly done, and by such an expedient alone could the amber, the most valuable chamber, have been wrested from the general destruction.

Having taken breakfast with Prince Theodore, and amused myself with the infantine prattle of his children, whether in the French, English, or German languages, for they seemed anxious to show off the proficiency they had made, I proceeded towards Tosna, where I arrived at seven in the evening. Young firs and birch border the road, which is good; though the country presents but little of interest, and seems to support but a slender population, considering its proximity to the capital.

I passed the night in the cottage of a farmer, resigning myself to the attacks and annoyance of such vermin as generally haunt impoverished dwellings, and was therefore proportionably pleased in the morning to resume my journey. My route was towards Liubane, at about the ninth milestone from which I sat down, to smoke a cigar or pipe, as fancy might dictate; I was suddenly seized from behind by two ruffians, whose visages were as much concealed as the oddness of their dress would permit. One of them, who held an iron bar in his hand, dragged me by the collar towards the forest, while the other, with a bayonetted musket, pushed me on in such a manner as to make me move with more than ordinary celerity; a boy, auxiliary to these vagabonds, was stationed *on the road-side to keep a look-out.*

We had got some sixty or eighty paces into the thickest part of the forest, when I was desired to undress, and having stripped off my trowsers and jacket, then my shirt, and, finally, my shoes and stockings, they proceeded to tie me to a tree. From this ceremony, and from the manner of it, I fully concluded that they intended to try the effect of a musket upon me, by firing at me as they would at a mark. I was, however, reserved for fresh scenes; the villains, with much *sang froid*, seated themselves at my feet, and rifled my knapsack and pockets, even cutting out the linings of the clothes in search of bank bills or some other valuable articles. They then compelled me to take at least a pound of black bread, and a glass of rum, poured from a small flask which had been suspended from my neck. Having appropriated my trowsers, shirts, stockings, and English shooting shoes, (the last of which I regretted most of all, as they were a present from Sir D. Bailey,) as also my spectacles, watch, compass, thermometer, and small pocket-sextant, with one hundred and sixty roubles, (about seven pounds,) they at length released me from the tree, and, at the point of a stiletto, made me swear that I would not inform against them—such, at least, I conjectured to be their meaning, though of their language I understood not a word.

Having received my promise, I was again treated to bread and rum, and once more fastened to the tree, in which condition they finally abandoned me. Not long after a boy who was passing heard my cries, and set me at liberty. I did not doubt he was sent by my late companions upon so considerate an errand, and felt so far grateful; though *it might* require something more than common

charity to forgive their depriving me of my shirt and trowsers, and leaving me almost as naked as I came into the world.

To pursue my route, or return to Tzarsko Selo, would indeed be alike indecent and ridiculous, but there being no remedy, I made therefore "forward" the order of the day; and having first, with the remnant of my apparel, rigged myself *à l'Ecossaise*, I resumed my route. I had still left me a blue jacket, a flannel waistcoat, and a spare one, which I tied round my waist in such a manner that it reached down to the knees; my empty knapsack was restored to its old place, and I trotted on with even a merry heart.

Within a few miles I passed betwixt files of soldiers employed in making a new road, under the orders of General Woronoff, upon whom I waited to report the situation in which I was placed. The servant, perhaps naturally enough, refused to let me pass without first acquainting his excellency with my business; I, however, steadily persisted in my determination; and at length, hearing the noise and scuffle of turning me out, the general appeared, and listened to my mournful tale. The good heart of his excellency suggested the necessity of first administering me food; some clothes were then offered to me, which I declined, considering my then dress as peculiarly, as well as nationally, becoming. The general then sent an officer with two men back to the village, to make inquiries concerning the robbery. These were, however, fruitless, and I quitted, with many thanks to his excellency, in his own carriage, which was directed to take me the first station. I soon discovered *that carriage-riding was too cold, and therefore preferred walking, barefooted as I was;*

and on the following morning I reached Tschduvo, a low and uncultivated waste, a hundred miles from St Petersburg. Thence to Podberezie, and thence to Novgorod. I had passed on the road many populous and neat villages, and numerous tents belonging to the military workmen, which gave additional interest to a fertile and picturesque scenery. To the left was the river Volkhoff, on which Novgorod stands. The approach is grand, and the numerous spires and steeples of the churches and convents, with their gilded and silvered casements glittering in the sun, recalled for a moment the memory of its ancient splendour. Crossing the bridge, I entered at two o'clock, and immediately waited on the governor. He would have provided me with clothing on the instant; I was, however, hungry, and requested food. The governor smiled, but assented, and I then accepted a shirt and trowsers.

I was recommended by his excellency to stop at Novgorod a few days, under the promise that he would apprehend the robbers. I told him I felt no doubt they would be discovered; but before that time I should have reached the heart of Siberia. Good quarters were, meantime, provided me in the habitation of a Russian merchant, to whom I had a letter of recommendation from St Petersburg. He had also the kind consideration to provide me a complete refit; and though this must have been at an expense of thirty or forty roubles, he positively refused my offer of reimbursement—an offer I was enabled to make through the delicate kindness of his excellency the Governor Gerebzoſſ.

This ancient and celebrated city, which in former days was characterised by the proverb, "Who

can resist the Gods and the great Novgorod?" is now only the capital of a province of its own name. In its former glory it was the metropolis of a great republic, with four hundred thousand souls within its walls. The population is now reduced to a fortieth part. Its immense trade had been gradually declining since the cruelties of Ivan Vassilich II., and was completely annihilated by the removal of the seat of government, by Peter the Great, from Moscow to the Gulf of Finland. Many handsome edifices, now in ruins, are lamentable proofs of its former grandeur and present decay. Its archiepiscopal cathedral, small, but very ancient, is filled with superstitious relics, and the ashes of several Russian Grand Dukes.

The steeples of Novgorod present a monument of considerable pride in the estimation of its inhabitants. Their distinction is in the cross at the top standing alone, unaccompanied by the crescent; and this is an emblem, intimating that the Tartars, in all their invasions, never succeeded so far as to enter this city. A distinction which universally holds in Russia; the reconquered cities bearing the crescent, but surmounted by the cross.

The following day, being that of Pentecost, I attended the service in the cathedral; and though I understood nothing of the language, yet was I forcibly struck with the primitive appearance of the clergy in their long beards, longer tresses, and still longer robes. They certainly carried all the appearance of devout ministers of religion.

I had intended, from Novgorod, a visit to Mr Glenney, at his establishment, eight miles distant, on the banks of the Veshora. Not finding him, however, *I put up at a farm-house for the night, having previously drunk kuass at a convent, paid*

a rouble for charity, and received a blessing upon entering Muscovy—not without a hope that I should find better treatment here than in Esthonia. Next day, passing over a wild dreary waste to Zaitzova, a pleasant town, of fifteen hundred inhabitants, I put up at a civil house, if the admission of both sexes, and of all ranks and dispositions, may deserve such a term ; the variety was indeed ludicrous enough, but the conduct and conversation were not of such a nature as to merit description.

The women of Muscovy hitherto appear civil and cleanly dressed, though disfigured by the abominable custom of tying their breasts as low, flat, and tight as possible ; they are not, however, quite so ludicrous as some of the creoles and slaves in the West Indies, who often suckle their children behind their backs. The men appear equally civil, obliging, and hospitable, but almost equally disguised by their swaddling coat of cloth or sheepskin, coloured trowsers, and immense boots, sash round the body, a wide-rimmed hat, and long beard ; a mode of dress which certainly gives them something of a ferocious appearance.

On the road to Yedrova I received two roubles as charity from the master of a post-house, from whom also I had received refreshment gratis. Knowing, as I did, that assistance was at hand, I declined the money, although my then distressed state might have warranted my open acceptance of it. I continued my route ; and, upon my arrival at the next station, I found the money in my cap. This is, indeed, real benevolence.

The canals are observable to the east, and present a beautiful appearance from the neat town of *Yedrova*. Reached Vishney-Volotchok late at *night*, a large scattered but flourishing town, for-

merly an imperial village, but enfranchised by Catherine, with canals uniting the trades of the Caspian and Baltic seas. I had previously crossed the Valday hills, which are the only elevations between the two capitals. They are in the government of Novgorod, as is also the Valday lake, nine miles in circumference. It has an island in its centre, on which stands a handsome monastery, which, with its steeples glittering through the dark foliage of its intervening woods, forms a beautiful and interesting object. There is also a little town of the same name on its banks. The land here rises into gentle eminences, with a good deal of cultivation.

Torjock was the next flourishing town which I reached, amid rain and thunder. This slight impediment, which broke up my travelling for the day, richly compensated the delay, by introducing me, first, to an excellent supper, gratis; and, secondly, to a beautiful and kind-hearted young widow, sister of the unfortunate Captain Golovnin, who was so inhumanly exposed in a cage at Japan. The master of the public house had civilly received me, and I was enjoying my own meditations, when Mrs Golovnin entered my room, accosting me in German, French, Russian, and lastly in my native tongue. After the manner of her sex, she got all my secrets out of me—but one—and in return sent me some tea, proffering, at the same time, the assistance of her purse. Had she offered me her hand and heart, I certainly should have replied otherwise than I did, for I felt very affectionately and gratefully towards so kind and lovely a woman, and who, although a widow, had yet scarcely passed her teens. Upon getting up in the morning, I discovered that my knapsack had been

searched, and my small stock of linen had been taken out and washed ; but of course not the smallest article was missing.

I refreshed myself at the fount, (which is always at hand in a Russian cottage, with a tea-kettle or other spouted vessel hanging over it,) breakfasted, and, making my *congé* to the household gods in the near corner of the room, departed from Terjock. I had not proceeded far when I met a carriage, and immediately heard myself addressed in the English language—"How do you do, Captain Cochrane?" On my acknowledging the name, the carriage stopped, and the owner, who proved to be a Mr Hippus, and had for some time been on the look-out for me, treated me very heartily to a biscuit and glass of wine. I then wished him a pleasant journey, and resumed mine, light as a lark at the unexpected pleasure of seeing English faces, and hearing my own tongue. Those who have been similarly situated, can readily conceive how happy I was to have met with a countryman in such a manner.

My way lay over a country where the Tver is a wandering stream, and where numerous handsome seats and neat villages made their appearance. These, however, but too strongly reminded me of the effects of absenteeism in Ireland, being evidently in a rapid state of decay. I have no hesitation, however, in saying, that the condition of the peasantry here is far superior to that class in Ireland. In Russia provisions are plentiful, good, and cheap ; while in Ireland they are scanty, poor, and dear, the best part being exported from the latter country, whilst the local impediments in the other render them not worth that expense. *Good comfortable log-houses are here found in*

every village ; immense droves of cattle are scattered over an unlimited pasture, and whole forests of fuel may be obtained for a trifle. With ordinary industry and economy the Russian peasant may become rich, especially those of the villages situated between the capitals, both of which might be supplied by them with butter and cheese ; whereas at present not a dairy exists, the peasantry contenting themselves with the culture of as much land, and the breeding of as many cattle, as may be sufficient for their immediate wants. The women I have always found engaged in some employment ; they make very good coarse woollen cloths and linens, as well as knit stockings and spin thread. The whole work of the house is thrown upon them, while they also partake the labours of the field. I will not certainly recommend, for the adoption of any civilized countries, the treatment they receive from their lordly masters ; although I have no doubt the like was the custom of England half a century ago, and may be still in the hard-working counties. Having mentioned Ireland in comparison with Russia, I may remark, that both countries may fairly vie with one another in the ancient savage virtue of hospitality.

Reached Tver the following day, and put up at the habitation of a long-bearded merchant ; where, after enjoying a good supper and sound sleep, I employed myself in perambulating the city. It is said to contain fifteen thousand inhabitants, being considerably larger, or at least more populous than Novgorod. Tver is situated at the junction of two small rivers, which empty themselves into the noble Volga ; the latter hence taking an easterly course towards *Nishney Novgorod*, and fertilizing, in its

course to the Caspian, some of the finest pr in the Russian empire.

The first circumstance which attracted m upon reaching Tver, was at the gate, w impost of three large stones is levied upo horse that passes. These are converted paving of the city ; nor will the tax appea slight or useless in a country where stones very abundant.

Crossing the river over a fine bridge of t 550 feet in length, I entered the principal the city. The public edifices on the bank Volga are handsome, and kept in good though the archbishop's palace resembles our workhouses. There is also a theatre, ge racks, and a beautiful building called the l Palace, rebuilt by Catherine. The cathedr plain stone ; there are, besides, thirty-four c and three convents, (one of which is said to the ashes of a page, whose prince deprived his mistress at the moment of their marria afterwards, when too late, repenting of it, an ing to expiate his crime, had this convent —two of them are for men and one for v three hospitals are also established upon a plan, and a bazar, with handsome piazzas the city lounge. The public gardens and w certainly susceptible of improvement ; bu the whole, it has a clean and regular appe and bids fair, from its trade and situation come an important city. The government immense quantities of grain from hence to tersburg, and two hundred barges were no off the city loaded with that article, and v veral millions of eggs.

A young Frenchman, who had been fiv

wounded in the battle of Borodino!!! accompanied me in my rambles. He prefers, it seems, to remain here, teaching his native language, rather than return to his native country. He murmured a little at the facility with which his scholars acquired the tongue; remarking also, what I believe is now generally acknowledged, the general aptitude of the Russian, whether in learning or teaching. I visited among other things a canal, which the last of the independent princes projected and began, to shorten a communication, as well as to form a winter haven for the barges and other small craft, which were, and indeed are still, exposed to considerable danger from the ice in the Volga. A mile only is wanting to complete this great and useful undertaking, in the junction of the Tmak and Volga. Of the earth thrown out during the excavation, has been formed at once a good road and a strong rampart to the city.

It was at Tver that I first began to comprehend any thing of the Russian hierarchy. It appears that the Greek church admits of two distinct classes and degrees, which may be called monastic and lay orders; to the first of which belong metropolitans, archbishops, bishops, archimandrites, and egoumens or abbots; to the second, protopopes or deans, priests, archdeacons, deacons, clerks, and readers. Each provincial capital has an institution to which all the sons of the clergy are admissible, to study the principles of their theology, and moral philosophy, and are afterwards turned over to the general college to complete their education, either for a military or an ecclesiastical life. If the former be adopted, they enter the army with the rank and pay of an officer; if the latter, they are ordained deacons. *The obligation of marriage*

is imposed upon all those who are below the degree of an egoumen or abbot; and should the wives die before their ordination as priests, they are forever precluded from that order. But if the wife of a *priest* dies, he may nevertheless become a dean: and if he afterwards enters a monastery, he may arrive at the highest degree. Should, however, the theological disciple be determined upon a state of celibacy, he may at once enter the monastic order, and become possessed of the power of a priest, as well as of the highest degree; but he can never afterwards become a disciple of Hymen. The revenue of a metropolitan does not exceed eight hundred pounds a-year, that of an archbishop six hundred, and of a bishop five hundred—sums apparently as small as persons of their rank can possibly subsist upon, even in Russia. They are, however, allowed a considerable sum, which is paid to them annually, for the purposes of charity.

Early on Monday, the 5th June, I quitted Tver for Moscow, passing sometimes along the banks of the Volga, at others over a rich grain country, amusing my mind alternately with the contemplation of the promising crops, and the thousands of loaded barges destined to bear them. Reached Davidova (thirty-two miles) at two o'clock, where I stopped to refresh, passing on my way a great number of pedestrian labourers, who, like the Gallegos of Spain, were travelling to the southward to assist the less populous districts in getting in the harvest. An amazing quantity of timber was felled and felling on the road-side, merely for the purpose of keeping the road in repair; nearly the whole distance from Novgorod to Moscow being a wooden causeway. At eight in the evening I continued my route, reaching Klinn at midnight,

and Peshi: at four in the morning. The country had a pleasing appearance, immense herds of cattle and flocks of sheep, with well-peopled villages, meeting the eye in every direction. I was supplied with plenty of black bread, milk, salt, and honey, which I found very excellent fare. Passing through Tschernaya Graz, I entered Moscow at eight in the morning, the last stage being distressingly fatiguing. Much rain fell, and I was not a little happy to reach the hospitable abode of Mr Lowan in time to breakfast. The last thirty-two hours I warrant as bearing witness to one of my readiest pedestrian trips—the distance is 168 versts, or about 96 miles: I have, however, done the same in Portugal.

The landscape on the approach to Moscow, from the Petersburg side, gives no promise of so great a metropolis, it being over a dreary and desolate waste. Nor does the immense and ancient capital itself make its appearance until the traveller is within two miles of it, when, upon rounding a tall low copse, sprinkled with a few genteel plantings, hundreds of spires and steeples, domes and towers, flash upon the eye—one vast assemblage of buildings rising in the fore-ground, and the uncultivated Sparrow-hills upon the right. After breakfast I waited upon his excellency the Governor-general, and arranged my papers so as to allow the resumption of my journey at leisure, when I perambulated the city. Among other things, the great gun, in whose muzzle I sat up—as well as the greater bell, bespoke my at-

I will not enter upon the discussion of the many strange stories of which this bell has been the subject, but on the assertion of the learned Dr

is imposed upon all those who are below the degree of an egoumen or abbot; and should the wives die before their ordination as priests, they are forever precluded from that order. But if the wife of a *priest* dies, he may nevertheless become a dean: and if he afterwards enters a monastery, he may arrive at the highest degree. Should, however, the theological disciple be determined upon a state of celibacy, he may at once enter the monastic order, and become possessed of the power of a priest, as well as of the highest degree; but he can never afterwards become a disciple of Hymen. The revenue of a metropolitan does not exceed eight hundred pounds a-year, that of an archbishop six hundred, and of a bishop five hundred—sums apparently as small as persons of their rank can possibly subsist upon, even in Russia. They are, however, allowed a considerable sum, which is paid to them annually, for the purposes of charity.

Early on Monday, the 5th June, I quitted Tver for Moscow, passing sometimes along the banks of the Volga, at others over a rich grain country, amusing my mind alternately with the contemplation of the promising crops, and the thousands of loaded barges destined to bear them. Reached Davidova (thirty-two miles) at two o'clock, where I stopped to refresh, passing on my way a great number of pedestrian labourers, who, like the Gallegos of Spain, were travelling to the southward to assist the less populous districts in getting in the harvest. An amazing quantity of timber was felled and felling on the road-side, merely for the purpose of keeping the road in repair; nearly the whole distance from Novgorod to Moscow being a wooden causeway. At eight in the evening I *continued my route*, reaching Klinn at midnight,

and Peski at four in the morning. The country had a pleasing appearance, immense herds of cattle and flocks of sheep, with well-peopled villages, greeting the eye in every direction. I was supplied with plenty of black bread, milk, salt, and knass, which I found very excellent fare. Passing through Tschornaya Graz, I entered Moscow at eight in the morning, the last stage being distressingly fatiguing. Much rain fell, and I was not a little happy to reach the hospitable abode of Mr Rowan in time to breakfast. The last thirty-two hours I warrant as bearing witness to one of my greatest pedestrian trips—the distance is 168 versts, or about 96 miles : I have, however, done the same in Portugal.

The landscape on the approach to Moscow, from the Petersburg side, gives no promise of so great a metropolis, it being over a dreary and desolate waste. Nor does the immense and ancient capital itself make its appearance until the traveller is within two miles of it, when, upon rounding a small low copse, sprinkled with a few genteel dwellings, hundreds of spires and steeples, domes and towers, flash upon the eye—one vast assemblage of buildings rising in the fore-ground, and only the uncultivated Sparrow-hills upon the right.

After breakfast I waited upon his excellency the governor-general, and arranged my papers so as to allow the resumption of my journey at leisure, and then perambulated the city. Among other things, the great gun, in whose muzzle I sat upright, as well as the greater bell, bespoke my attention.

I shall not enter upon the discussion of the many and strange stories of which this bell has been the subject ; but *on the assertion* of the learned Dr

Clarke, that the Russian nation might as well attempt to suspend a three-decker, with all her apparel, tackling, &c. I would only observe, that nation possesses better means for performing such a feat, nor has any nation made a better use of such means than Russia; they are, I should think, qualified to remove as large or as weighty a body as any other nation in Europe. The Russians, for years ago, transported, from the frontiers of Europe to the north-east of Asia, cannon, anchors and other heavy articles, belonging to an expedition about to explore the Icy Sea, and all went over land for a distance of about *seven thousand* miles. I have seen similar exertions in Canada, but by means superior; and it must not be forgotten, that any thing can and will be done in Russia, when the order is accompanied with those almighty words, "kacknee boud," which truly means "as how," but is generally used in the sense of "must be done."

It will not be supposed that I should omit to visit the Kremlin, which is still an extraordinary place. Although much of its singular appearance has been obviated in the restored buildings, yet it is still far from regular. The view from the tower of St John is still preserved, that building having withstood the fury of the general conflagration. The new imperial palace is wholly undeserving the name; and only that a building is wanted for the use of the imperial family, and that there was a vacancy upon the site on which it stands, it would call loudly for another firebrand. Of course I conformed to the general custom in taking off my hat as I passed under the holy gate, and again in visiting the little chapel of Peter the Great. In every other respect than that of population, I found

Moscow the same as in Clarke's time, beautiful and rich, grotesque and absurd, magnificent and mean. But besides these general features, there is at present one arising from latter circumstances, the city being only half built and the streets half finished ; brick and mortar everywhere incommoding the passenger. Such is the appearance of Moscow, which is yet very surprising, considering how recently it has risen from its ashes.

The former number of churches, chapels, and mosques (the forty-forties) is now reduced to less than half the number. Of public and private hospitals there are several. The most remarkable is the Foundling, which escaped the fire ; a noble and well-endowed edifice. The average number of infants received, one year with another, is estimated at five or six thousand. Not more than two-thirds of these are understood to be reared. What, besides the ordinary dangers attendant on exposure, principally of course in the night, and in such a climate, may be the cause of this mortality, I know not, and it would be evidently foreign to my object to inquire.

The hospitals of Count Sheremetioff and Prince Galitzin are monuments of private beneficence and public humanity. The former has two hundred and fifty patients within its walls, independent of out-door pensioners. Persons of all nations, and of both sexes, and with whatever disorders they may be afflicted, are admissible for cure ; and the old and infirm remain for life. A physician, surgeon, inspector, apothecary, and proper attendants, are settled on the establishments, with handsome salaries and apartments. The buildings are spacious and elegantly modern. The wards are small, *containing but eight patients*, a novel, though per-

haps an improving feature in a medical establishment, as evidently tending to the diminution of contagion. The rooms are well ventilated. The revenue is 150,000 roubles, derived from the property of 8000 peasants, besides lands and villages. The late count is said to have founded the hospital in consideration of the Emperor's permission to marry one of his own female slaves. The present young count deserves much credit, for having improved the rents and extended the privileges of the hospital. That belonging to Prince Galitzin is on a similar plan, although not quite so extensive.

Moscow is said to stand upon more ground than any city in Europe ; which may very well be true, as almost every palace or nobleman's house has a garden, and all wooden houses are detached, from the fear of fire. There are many public edifices well worthy the attention of the traveller, as well from the novelty of their architecture as from their destination ; the magnificence of some is indeed surprising, containing as they do six or seven hundred body servants during the winter season. The present population is reckoned at three hundred and fifty thousand souls ; a population which it is supposed fluctuates sixty or seventy thousand—the present, the winter season, being the period when the gaieties are at their height. On the 30th of May I quitted Moscow, in a drosky, accompanied by Mr Rowan, to dine with a Scotch gentleman, a Mr Rogers, who manages the agricultural part of Count Romansoff's property in the English style, which has been introduced with great success. We afterwards visited the beautiful botanical garden of Count Razumofsky, called Gorinkay, *which does infinite credit to the superintendence*

of Dr Fischer. The number of its plants, thirteen thousand, would alone recommend it to the botanist, as will the buildings and pleasure-grounds to that of the inferior savans. Two more patriotic noblemen than these two do not exist.

From my highland companion I received a pair of leather trowsers, no small present on such a journey; and, parting with my amiable and universally beloved friend Mr Rowan, commenced my journey on foot. Passed, at two miles, the magnificent chateau of a Prince Galitzin—(the great number of these princes must excuse my specification of them); after which, amid heavy rain and thunder, I passed through several small villages to Bouncova, lying in a well-cultivated and picturesque country. I was greatly fatigued with twenty-five miles of heavy walk, and felt indeed a little melancholy. After a night's rest, however, I resumed with revived spirits, and reached Vospuche. The country is interesting, and adorned with many residences belonging to the lords of the village, but which are going to ruin as fast as time and neglect can push them. To Uchekittinah is hill and dale, wood and water, all the way. I arrived at Vladimir in time to breakfast, travelling during the night to escape the heat of the sun. My way of life had evidently excited an interest in the peasantry among whom I passed, several of them dividing their meals, and sharing their fire and dwellings with me, with the most cordial good will; nor did the perusal of my passports, and other Russian documents, afford them the less *surprise*—such a favour they justly considered had never before been granted, and therefore I was of course more *than ordinarily* favoured.

I might nevertheless have considered myself

fortunate, if I could have reached Vladimir with only a sound drubbing instead of a broken head, merely because I could not ask in the Russian language for some kuass, and fire to light my pipe. To prevent the recurrence of this evil, on the next occasion I entered a house, *sans ceremonie*, and helped myself. My hostess instantly dashed the cup into the street, and, with the assistance of others of her sex, drove me after it at the end of broomsticks, which were besides not spared upon my back. The odds were fearful against me; I was, therefore, content to bear my punishment without resistance. At the next place, a decent chop-house in Vladimir, I inquired, of a servant who spoke French, the character of my persecutors, and learned that most of those villages are inhabited by Raskolnicks or Schismatics, who have in a manner withdrawn or separated from the Greek church, and admit of even less toleration than the church of Rome. They are bound by the rules of their religion to deny food, fire, and water, and every assistance, to all who are not of their own persuasion; and are even forbidden to hold any intercourse with them. Notwithstanding the repulsiveness of these tenets, they are said to gain many thousands of proselytes every year. They are considered good agriculturists, and of the most sober and industrious habits, never drinking ardent spirits, nor using tobacco. Among themselves they are a kind friendly people, and excellent fathers and husbands; but towards the rest of the world are—what I too certainly experienced.

Vladimir is a fine city on the banks of the Kliasma, the capital of a small province only, although *formerly* of all Ducal Russia. Its situation is *beautiful*, standing on a considerable eminence

which overhangs the river, and commanding a fine view of the surrounding country. There are still remaining many traces of its former greatness, such as the royal palace and gardens, a range of public offices, and several handsome churches. The day was hot, and I took advantage of it to wash and dry my linen—no unusual thing with me on board of a man of war, where I have often been obliged not only to do this, but have been prevented from wearing shoes or stockings on the score of economy ;—alas ! how times are changed. My washing being finished, I lay down under the bridge, and enjoyed a sound sleep. In the evening I resumed my route towards Nishney Novgorod.

The road was a heavy one, and when I had passed seven versts, all signs of cultivation ceased. By midnight I reached Soudogda, and at two the next day, Morshok, over a low, *sandy*, and dreary country, covered with *brush*-wood, furnishing nothing but materials for *crack* ships. In the evening, at Dratchevo, my passports were demanded by two young men, whom I somewhat hastily set down as troublesome fellows, because no entreaties could induce them to allow my proceeding without my passport being inspected by the general of brigade. I was, however, more than a little ashamed of my pertinacity, on being sent to a comfortable lodging, followed by a hot and substantial supper. In the morning I received a message to attend the general, with whom I breakfasted ; and in consideration of having been detained all the night, which was my time of travelling, I was favoured with a vehicle as far as Mourom. This is the principal rendezvous of the Mordva Tartars, bearing the name of a city, but undeserving of that of village, being a vast *assemblage* of unsociable huts, with

six or seven churches. Its situation on the Oka is somewhat in its favour; but, except that, and tracing the origin of its eccentric inhabitants, I believe there is nothing of interest for the scientific—much less for the ordinary—traveller.

Having hired a canoe, I paddled across the river, and, following a dreary and marshy country, reached Manacovo. At a pretty little village on the banks of a lake, at midnight, I was greatly charmed with the singing of some boys and girls, accompanied by a simple instrument, called, in Russian, baalaalaika, and which is in fact only a two-stringed guitar. The effect of this rude harmony, softened by its passage across the water, was peculiarly sweet.

The beauty of the night prompted me to continue my route, and I left the happy villagers for Pogost, twenty-four miles, where I arrived half famished and quite fatigued, not having tasted food during twenty-four hours, and a march of forty miles. I had, however, drank abundantly, perhaps incautiously, of water. The country was level and fertile, well wooded, and somewhat pretty, in its scenery. Nor is the town of Pogost by any means an ill-built one; its annual fair had just terminated, and I could not help smiling at the remnant of saleable articles, consisting of horses, carts, wheels, saddlery, and, in short, every constituent and requisite for ordinary vehicles, besides an abundance of common earthenware, rope, with kuass and bread to refresh the sober, and barrels of spirit to stupify the drunkard—of which, indeed, there was no scarcity, either of men or women.

Being too jaded to proceed farther, I thought myself fortunate in being able to pass the night in *a cash*; nor did I think this mode of passing the

night a novel one ; often, very often, have I, in the fastnesses of Spain and Portugal, passed the night in a similar style. Here I usurp the place of crockery, there I usurped that of wine ; here in the land of liberality, there in that of nonentity. Arrived at Pavlovo, distant fourteen miles, over a cross road, and a beautiful as well as fertile valley, studded with villages, in the midst of which the Oka makes its course.

Pavlovo is placed in a bay on the left bank of the Oka, which is crowded with small vessels. It is said to contain eight thousand workmen, and is the private property of General Sheremetioff, the head of which family, a minor, is possessed of one hundred and sixty thousand peasants. The general's property is, however, a vile dirty place ; but the surrounding country, and the view of it from the palace, is very fine.

I had not an opportunity of viewing the immense iron-works here carried on, being anxious to get on towards Nishney Novgorod, which I entered on the evening of the next day. I had previously passed through Selo-Bogorodskoye, where I underwent a second lecture for smoking in the village. The elder of the village spared me, doubtless, however, on the same grounds as had excused me on a previous occasion. The country appeared extremely populous, and I felt highly pleased with my walk on the elevated banks of the Oka, and in witnessing its numerous establishments of tanners and dyers, with such extensive iron-works, that the neighbourhood of Pavlovo has been justly termed the Birmingham of Russia.

The entrance to Nishney Novgorod is execrable, from the extreme filthiness of the suburbs ; but descending a steep hill, I found myself in a busy and

crowded market, where I procured a drosky, and proceeded to the dwelling of Baron Bode, to whom I carried a recommendatory letter. He received me kindly, placing me for board in his own house ; while for lodging I preferred the open air of his garden ; there, with my knapsack for a pillow, I passed the night more pleasantly than I should have done on a bed of down, which the baron most sincerely pressed me to accept. The city is large, scattered, and somewhat ill built, but evidently improving. This is evinced by the number of new buildings which have been erected, in consequence of the celebrated fair called Makarieff being transplanted hither. The upper part of the city, in which the governor, chief officers, and military, reside, is of course the best. Its situation is peculiarly pleasant and airy, though surrounded by the stubborn remains of the old citadel and Tartar wall. The lower town which may be termed the St Giles's of the city, is occupied principally by persons engaged in merchandise.

Nishney Novgorod, in contradistinction to Great Novgorod, owes its existence to the Great Duke Vassil, who thus named it when he caused its inhabitants to be transplanted there from the great city before named. Its inhabitants, Russians and Tartars, amount to fifteen or sixteen thousand, though its visitors during the fair probably make its population at that time from one hundred and twenty to one hundred and fifty thousand. Among them may be seen Chinese, Persians, Circassians, Armenians, Tartars, Bucharrians, Jews (of course), and a specimen besides of almost every European nation. The fair, in point of value, is considered as second to none in Europe ; the business done *being* estimated at nearly two hundred millions of

roubles. This computation may probably allow a deduction of about one half, but in any case the government derives from it a very considerable revenue. The buildings on the site for the fair are in a forward state, but will still require many years, and several millions of money, to complete. The situation is considered highly eligible, and the plan is by General Betancourt, an eminent Spanish engineer.

The eligibility of the new site is, notwithstanding, fairly questionable, as it is not entirely removed from the danger of an inundation by the Oka, from the river giving indications, at no distant period, of shifting its channel; in which case the consequences must be fatal. A canal has recently been cut so as to make this part an island, instead of a peninsula as before; a measure which, in my opinion, contributes to weaken the foundation, because the canal lies streamward of the fair, and, consequently, at the rises or freshes of the river, it is liable to be completely overflowed. When it is recollected that the last overflowing of the Volga formed a new bank of seven feet high above the common bed of the river, between the city and the fair, it is not too much to fear that it may serve to change the course of the river, whose extra rise was last year thirty-five feet; and should the new-formed bank prove a solid foundation, and resist for some years the impetuosity of the stream, there will then be no other outlet but the very site of the fair, as it stands nearly opposite to the place where the Oka discharges its waters into the Volga. Many people think, and, it appears to me, reasonably, that lower down the Volga, as at Kazan or Bokorotsk, were more eligible places for the fair, when its removal *became indispensable*.

Nishney Novgorod is, also, too near St Petersburg, and too far from Persia, Astrakan, Bucharia, and China, to be conveniently reached in one season, because the latter journeys are against, while the former is with, the stream. Had Kazan or Bokorotsk been selected, the voyage would have been more nearly equalized both in time and expense.

I was shown over the fair by a Spanish gentleman, now an officer of engineers of Russia, and with whose family, in Granada in Spain, I had lately resided. He is married to the daughter of General Betancourt, chief of his department. I dined with him and two other Spanish colonels, as well as a young Moscovy Englishman, the whole party even here, in the very heart of Russia, talking only the Spanish language.

His excellency the governor received me with customary attention ; but I was not so fortunate as to meet his amiable lady, an Englishwoman. The truth was, her servant would not admit me, judging, no doubt, from the length of my beard and shabbiness of my dress, that I must be a Jew, or something worse. Thus denied, I embarked, in a freak of fancy, on board a lighter bound to Kazan, the better to enjoy the beautiful scenery of the Volga ; having previously, and only just in time, been supplied with provisions and a pair of English shooting-shoes (my constant Godsend), through the kindness of my excellent host Baron Bode.

CHAPTER IV.

the Volga—Makarieff—Kusmodemiansk—Tchebacksar—
 Vutchi—Kazan—Perm—Koungour—Souksoum, Demi-
 doff's Zavod—Achitskaya Krepost—Krasnoufinsk—Be-
 limbaiefsky Zavod—Ekatherinebourg—Berezofsky—Ka-
 mishloff—Tumen—Tobolsk.

I AM now on the magnificent Volga. The light-
 er on board which I had embarked did not depart
 for thirty-six hours, and I felt too much of the sail-
 er in me to quit her; in short, I considered my-
 self as one of the crew, working my passage, and
 as such employed myself. Nothing was demanded
 of me but to row the boat ashore for the captain,
 and now and then a glass of vodkey. This I was
 content to submit to, till I found that some grog
 and more tobacco was followed by the demand of
 still more grog, which my purse could very ill bear.
 I was therefore very well pleased when the anchor
 was weighed, and we descended the stream; but
 so slow was our progress, that we kept the heights
 of Novgorod in sight for two days, being frequent-
 ly obliged to anchor, with the ever-dunning sound
 of "Vodkey, batiushka," or, Gin, master. The
 vessel I was in measured about two hundred and
 fifty tons, perfectly *flat-bottomed*, and drawing but

five feet water. At length, losing sight of Nishney Novgorod, we passed many islands and villages, the latter always on the right bank, and on the left an uninterrupted low moorish heath. The strength of the current I calculated at two knots and a half.

The variety and singular appearance of the different craft on the Volga, not a little surprised and amused me, as well as the innumerable different ways in which they were propelled. The present season of the year, that immediately preceding the fair, is the best for the navigation of the Volga, when barks from one thousand tons to the size of a canoe, all promiscuously float together. They are generally provided with one mast, which, in the largest, may equal a frigate's main-mast. The weight of the mat-sail must be prodigious, having no fewer than an hundred and sixty breadths in it; and yet the facility with which it is managed will bear comparison with that of the Yankies, with their boom main-sail in the fore and aft clippers. They are generally worked by from fifteen to forty people. The rudder is a ponderous machine, in many cases suspended from the stern-post, and yet towing astern twelve and fifteen feet; the tillers of which I have ascertained from measurement to be from thirty to forty feet long, and all worked by the hand.

The soil on either side is clay and chalk, and the wood fir and birch. The inhabitants of the villages are the inoffensive and ignorant Fins, a race of people more approximating to the character of the Gallegos in Lisbon than any other class of people I have seen. Their great content and small possessions are in both a prominent feature. We reached Makarieff after a tedious and vexatious

voyage, vexations from the annoyance of the horse-flies and mosquitoes. I was fairly put to the alternative whether, during my sleep, I would be suffocated or devoured. I preferred the former as smacking more of humanity, wrapping myself up close in a spare sail, with three others of the crew.

Makarieff is the first inhabited spot from Nishney Novgorod, on the left bank of the Volga ; a straggling and ill-built place, although a large monastery, at one extremity, appears to strive hard to acquire for it an appearance of respectability. The great fair, which is now held at Nishney Novgorod, was formerly held here ; but was removed on the destruction of its site by fire, wilfully, as is supposed. Many vessels, loaded with tallow, hides, and iron, were then lying off it, wind-bound, rather than work up between the numerous islands, shoals, and sand-banks, between this place and Novgorod. I remarked, with pleasure, the knowledge these otherwise ignorant fellows have of the power of the rudder, performing all the close shades like a fleet of colliers in the Thames.

At Makarieff I noticed the utmost height to which the Volga had risen last season, being eighteen feet perpendicular height, at one hundred and fifty feet distance from the nearest edge of the river, which is still going down. Having remained at anchor two days, and paid toll at a place called Vasilisomski, which is a sort of sound, where loaded vessels pay one and a half, and those in ballast one rouble (no slight sinecure), we departed with a fresh and favourable gale, passing fleets of vessels, at anchor and under sail. If the trade of the place were to be computed from the number of vessels, without respect to their value, the Volga *would indeed be a second Thames.*

We soon reached Kusmodemiansk, a large populous town, on the right bank of the river, four neat churches, pleasantly situated at the end and extremity of that chain of lofty hills which in succession from Nishney Novgorod, and abruptly terminate. The left bank of the river preserved its desolate and unhealthy appearance. The next halting-place was Tchebacksar, where the river is very shallow, and encumbered with shifting banks; and here we were again detained by foul winds, as well as the negligence or laziness of the crew, till I began to feel tired of my arduous excursion, the river offering so very little variety of notice. I would fain have pursued my journey by land, but was prevented by my bag of copper money, which, although its value was not a great one, was, at least, sixty pounds weight. Leaving it was, of course, totally out of the question; I had, therefore, no remedy but patience.

At Tchebacksar I again laid in a stock of provisions, conformably to agreement. It consisted of barley, rye, flour, with oil and black bread. I had hitherto messed with the crew, whose diet was wholesome, although rather new to me, consisted of the above flour boiled, and stewed down with water and oil. He who likes burgoo, must not refuse casha; and it was with extreme pleasure that I received the spoon into my hand, in my proper time to partake of this humble fare. This we did three times a-day, and I had the happy consciousness of its perfect cleanliness, as I myself stood by. Provisions, in general, may be here considered as cheap; bread, a halfpenny per pound; beer, a halfpenny per bottle; eggs, threepence per dozen, and milk, a farthing per bottle. Animal food I *know nothing* about, not having bought any.

Passed the village of Vutchi, placed between two elevated table-hills. A monastery, with four churches, flanked with a thick forest of evergreens, gave it a pleasing appearance. A boat came alongside from the monastery, with a poor-box, into which I put twopence, no small sum in this part of the world. Upon reaching the little hamlet of Kushuga, our crew quitted us, with bag and baggage, two long-bearded gentlemen taking charge of the craft to Kazan; a trifling incident, but which powerfully reminded me of the necessity of impressment. We were now anxiously looking out for Kazan, and the distant countries became more elevated, and well wooded with lofty oaks. Si-viatski, with its remnant of an old stone castle, was the last interesting spot I observed before I reached Kazan. The left bank of the river, except at the single town of Makarieff, is one universal waste. From the Volga to the city is about three miles of a low flat; and this I walked on Tuesday, the 22d of June, and the twelfth day from Novgorod, being about the same time that I should have taken in going by land.

This celebrated city, on nearing it from the westward, greatly resembles Badajos on its approach from Elvas;—the extended view, the river in front, the fortress on the left, and the distant elevated lands to the southward. The dirty suburbs, situated on a marshy swamp, the principal residence of the Tartar inhabitants, is the next indication of Kazan; the last was after crossing the Kazanka, when the noblest part of this noble city fronts you in full view. I passed on to the hospitable abode of the learned Professor Fuchs.

The extensive province of Kazan is watered by the *noble Volga and beautiful Kama*. Its popu-

lation is reckoned at nine hundred thousand, composed of Tartars, Fins, Votiaki, Tchuvoshi, and Russians, and a few Mordvas. Near five hundred thousand of these inhabitants are peasants or slaves, four-fifths of whom belong to the crown, and the rest to the different nobility of Kazan. The trade of the province is said to be great, exporting vast quantities of tanned and untanned leather, besides about two hundred and fifty thousand poods (36lbs. English) of soap, made from the fat of the Astrakan seals. Potash is also a thriving concern. The gold and silver embroidery of boots, shoes, slippers, bonnets, &c. employs a great number of people. The province is low and wet, and to its acknowledged unhealthiness the impurity of the water greatly contributes. The greatest heat is 29°, and the greatest cold 33°, of Reaumur's scale. The Volga is navigable about two hundred days in the year. The province is in general well cultivated, and exports prodigious quantities of corn to the capitals. The revenue is estimated at sixteen millions of roubles (or about L.700,000, a rouble being 10d. of our money); and of these spirits alone furnish four millions, the consumption of which, in the city only, on a feast day, is said to amount to the value of five thousand roubles, and on ordinary days to about fifteen hundred.

The city of Kazan is considered as second only to the capitals, containing nearly forty thousand inhabitants, of which twelve thousand are Tartars. On the present state of the city it is hardly fair to give an opinion, rising as it is from the ashes of a fire scarcely five years extinguished. It had formerly a cathedral on the site of the ancient *mosque*, as also a palace; both were destroyed by *an explosion in the citadel*. The destruction of the

city was indeed nearly complete, and it is difficult to conceive how any vestige could remain, a high wind driving a mass of flame over houses built, and streets absolutely paved, with wood. These wooden buildings and pavements have been discountenanced by the Emperor, who has held out many inducements to build with brick. The city is archiepiscopal, and the seat of an university. It has several handsome churches, four of which belong to the Raskolnicks, besides many Tartar mosques, and some convents. The church of St Peter and St Paul is a handsome stone edifice, erected at the expense of a private gentleman in honour of Peter the Great, in consideration of that monarch's having made his residence a halting-place during one of his journeys. In Kazan also is a church, which gave rise to that beautiful building, the Kazan Church at St Petersburg, though its architecture would seem to denote a theatre. I dined with her eminence the abbess, for so she is styled. She had the benevolence to present me with an image of their saint, which was to act as a charm against otherwise inevitable mischief. I accepted it, of course, with due reverence, without any strong faith in its boasted virtues—an estimate which it will be seen by experience was fully vindicated. The lady, the original of this image, lives twelve miles from Kazan, to which, however, she makes an annual visit, and collects from the bounty of her believers sufficient to support her the ensuing year.

I visited the Hotel des Nobles, a club formed of the nobility, fifteen or twenty of whom daily dine there, independent of casual travellers, who have free access upon moderate terms. A friendly sort of intercourse *is thus kept up*, and the news of the

day emanates from the club in a manner which the servile press dares not attempt. Billiards and cards are the set amusements of the club, it being a custom of Russian idlers to play boston before and after dinner. They then retire to business or to sleep, meeting again in the evening to repeat the entertainment over a cup of tea. Speaking of the word boston, it is rather a curious circumstance that such an Anglo-amusement should have become exclusively the adoption of the empire of Russia ;—under the wings of the eagle it was brought forth, and there it is still fostered. Among the numerous individuals here from whom I received marked attention, I should specially notice the governor and vice-governor; the Prince Davidoff, director of the post; and Prince Tenisheff, general in the army, and head of a military commission, not forgetting my friend the professor. Both the princes are of Tartar origin, though their character and conduct would do honour to the proudest rank of polished society. I attended a fête given by the latter prince at his villa, seventeen versts from the city. If the learned Dr Clarke had been living and present, he would have found, in the delicacy and decorum everywhere prevalent, a strong proof that a Russian country-house *is not now*, at least, such as he has described it.

A Russian prince, count, or baron, descended from a Russian family, is always a nobleman, without any military, civil, or honorary distinction. But no person of those ranks, whose origin has been Tartar, Asiatic, or foreign, has any claim whatever to nobility beyond the other free individuals of the empire; the title is indeed hereditary, and descends in the same wholesale manner as in Germany, but *it gives no rank or privilege whatever*. Without

the addition of military or civil rank, title is rather a disadvantage to the possessor, as the empire expects from every man of respectability a three years' service in the army, navy, or civil departments. After this he may retire with credit ; yet, so salutary is the effect of this custom, that the retirement of an officer is of extremely rare occurrence. In case, however, of any change of inclination, they are permitted, within certain limitations, to vary the nature of their service ; thus, an officer of the navy may change to the army or civil department ; an officer of the army to the civil department, but not to the navy ; but an officer of the civil service cannot exchange into either army or navy ;—thus forming a strong inducement to them to commence at least with the profession of arms.

A prince is not, from that circumstance, a nobleman, though an officer of whatever rank is ; and by his becoming a major in the army, or captain in the navy, he entails upon his children, without limit, the rank of nobility. The rank of women in Russia is fixed, like their condition, for better or worse, according to that of their husbands. If a woman not noble marries a slave, she degrades herself to his condition ; while a woman slave, becoming united to a freeman, becomes free. But in Russia every thing is at the disposal of the Emperor ; titles, privileges, rank, and fortune, are regulated by his will. And formerly, when it was no uncommon thing for an Emperor to give the benefit of a Siberian air to ministers, counts, and other dignitaries of the empire, it was not unusual to accompany the seclusion with the loss of honours, hereditary rank, of fortune, and even of the very name. The latter circumstance never, indeed, took place but when the *person was charged with a crime.*

But this arbitrary exercise of power has certainly not occurred during the present Emperor's reign, nor would the exercise of such a prerogative be tolerated for any length of time.

The governor of Kazan was good enough to make up a part of my lost time, by giving me a lift towards Perm ; and on the 25th of June I departed in a kibitka, taking a last view of the city from Tzaritzino. Crossed the Kama, which enters the Volga, at forty miles below Kazan. The road had been very fine, and the country fertile in corn and flax, the principal productions. The appearance of the crops was good, and the preparations for the harvest cast a lively and agreeable feature upon the journey. I overtook great numbers of men and boys returning to their homes, having carried vessels down the Kama, and thence into the Volga. The country on the east side of the Kama becomes wild and dreary, through forests of fir, birch, and poplars. The weather was sultry, and the mosquitoes troublesome ; and there was nothing to delight the eye, or interest the feelings, except the numerous Tartar villages, which lie scattered at every five or six miles' distance. Many of the Viatka race, a handsome people, are in the neighbourhood. Although I had ceased for the present to be a pedestrian, I did not, from whatever cause, receive so great civility as I had been accustomed to. The conduct of the postilion to the poor peasantry, was not such as to induce my forming a favourable opinion of the Permian executives. I could not help regretting that the present mode of forwarding the post affords no security against fraud, cruelty, and abuse. The moment these postilions arrive at a station, they fly to the *kabak*, or gin-shop, where they loiter away half an

hour in drinking, &c. When the postilion is ready to start, he holds out his hand with the same avidity and mechanical appearance as a lawyer or physician would do ; generally a rouble, or a couple, according to the length of the station or number of horses, is given, to prevent—what ? Why, to prevent the free exercise of their high powers in driving the horses at so furious a rate, as to endanger not only the lives of the poor animals, but of the driver and other persons going with him. The forwarding of the post being by contract between the government and the individual, is thus liable to a most intolerable abuse; of course the owner of the horses will sooner part with a couple of shillings, than run the risk of losing one of his horses by being overdriven, a circumstance which not unfrequently happens. At present there is but one favourable consideration in the post-office department ; that is, its extraordinary speed, which I shall have occasion hereafter to notice.

On the fourth day I entered Perm, thoroughly fatigued with the jolting of the kибитка, although the road was very fine, lying invariably through thick woods, with but two towns, and most unprepossessing villages, all the way from Kazan.

Having delivered a letter to the director of the post, who understood no language but the Russian, he recommended me to the care and attention of a Mr Berg, formerly a lieutenant in the Russian navy, now an author and a rich man—advantages which seldom accompany each other. His knowledge of the English language, as well as his hospitality and urbanity, made his company highly valuable. He had made the tour of the world with Commodore Kruzenstern, and was consequently able to give *me a great deal of useful information.*

Perm is the capital of a province, and a considerable city, built by the Empress Catherine at the time that great princess increased the number of governments from fourteen to forty-seven; convinced that a due administration of justice could not take place where the governments are so extensive. The city stands on the right bank of the Kama, covered on three sides by a thick forest, whose trees reach to the very gates of the city. It is regularly and handsomely built, and contains about eight thousand inhabitants; the whole province numbers eight hundred thousand, consisting of Russians, Bashkires, Tcheremiss, Teptery, and Vaugoles. The Bashkires, a numerous race, are said to be descendants of the Tartars who inhabited the district between the Don, the Volga, and the Ural mountains, and are probably of the same family with the Tartars of Kazan. They were originally wanderers, but, since their subjection to Russia, have applied themselves to agriculture and the breeding of cattle, especially of horses. These they have learned to manage with facility, and even with grace; and yet, even this has not destroyed that perhaps most savage of their original habits, the feeding upon their carcasses. Their character is worse than indifferent, being lazy, and tyrannical towards their wives, to whose care, nevertheless, they owe every thing. They are handsome both in form and features, and are fond of medals and fanciful ornaments, or dresses. Both sexes dress nearly alike, in large trowsers, and a loose gown fastened round the waist with a silk sash. Their heads are usually shaved, and covered with a cap decorated with embroidery; as are likewise their boots.

There is but one public school in Perm, and

that of small repute, and the state of society and of education in general is at a low ebb ; yet Perm is a thriving place, being rich in its provincial exports, which, from the local situation, must all go through the capital. The export of iron is said to equal five millions of poods, which, with six millions of poods of salt, seventy thousand poods of copper, seventeen of gold, and two millions and a half of coined roubles from Ekatherinebourg, form no bad criterion for estimating the riches of the government. Perm yields a gross revenue of ten millions of roubles, which, on a deduction of seven for its expenses, leaves a net revenue of three millions, exactly equalling the copper money and gold collected from the sands of Ekatherinebourg. The soil is in general good ; corn is both cheap and abundant, being exported in great quantities. The face of the country is generally level, till nearing the Siberian frontiers at the base of the Ural mountains, which separate Europe from Asia. The importance of these mountains seems to be little felt or understood by the Russian government, though there can be no doubt of their containing sources of wealth all but inexhaustible.

I left Perm on the 8th of July, on one of the finest roads in the world. At three miles I passed an exceedingly fertile spot, beautifully reflected from the dark woods, which skirt it even to the horizon. Before reaching the first station, I had passed five villages, in a delightful walk, the beauty of which did not afterwards diminish, while the Kama seemed to travel by my side. The road is good as far as Koungour, and the country fertile, with hills traversing it in all directions. The valleys are filled with villages, nursed in the bosom of peace, and *fed with the abundance of plenty*, of

which blessings they are not, from their local situation, likely to be soon deprived.

Koungour, formerly the capital of several provinces, has now little or nothing to boast of besides the beauty of its situation. After dinner I reached Sabarsk, a village, eighteen miles, where I put up for the night. It lies in a well-wooded country, and whose lands are economized and attended to in a manner worthy of the disciples of Englishmen. Koungour appears to me to be on an elevated level; for I consider that the grand base of the Ural mountains commences from Perm.

From Koungour, I reached Souksoum, Demidoff's Zavod, viz. iron works, a large, long, and busy place, on the borders of a lake, where is a considerable iron manufactory as well as distillery. The situation is in a deep hollow, surrounded by thickly clad hills of fir. Unlike the people of Kazan, I found the inhabitants a churlish race; but, being in good health and spirits, I took little heed, simply showing my passport and open order to the police, as a hint for proper treatment. The elders of the villages and I were, however, sure to be good friends, so long as milk, black bread, and kuass, with sometimes soup, were to be purchased. To these were added a glass of cordial at the kabak or gin-shop, procured gratis by an order from the farmer-general, and which latter I divided with my friends.

As I approached the frontiers of Siberia I began to give way to groundless, though perhaps natural apprehensions; and indeed as I neared such a supposed scene of cruelty and misery, I became completely agitated. Hitherto Providence had protected me, but although I felt thankful for the *past*, I could not but be concerned for the future,

reasonably doubting how, where, and when, my pilgrimage would end.

Pursuing my route, I reached the sixth station, charmed with the beauty of the surrounding scenery. And if I might judge of the number of its inhabitants by the quantity of cultivated land, I should say it was one of the most populous, as well as finest, spots I had ever seen. Achitskaya Krepost was the next large village, with a good post-house. Hence the road turns off to the south, to the summit of a range of hills, which commanded an extensive prospect of a lovely scene, to which a slight fall of rain had given increased freshness, brilliancy and beauty. I passed a large unemployed distillery, the property of the government, as indeed are all others on this side of the Ural mountains, the government having monopolized the sale of spirits throughout the European dominions. If the mere increase of the public revenue may warrant such a measure, there can be no more said; but whatever may be the direct benefit to the treasury, of carrying on business to the amount of thirty millions of roubles per annum, its mischievous tendency, in enriching a few individuals at the expense of as many thousands, is incalculable. By farming the distilleries, a system of plunder is practically encouraged, while the losers in the long run are the poor peasantry, who receive a trash of spirit far below the proof, it being to my knowledge doubly and trebly watered; nor can the retailers of such stuff get back their money in any other manner.

The situation of vice-governor thus becomes one of the greatest value, receiving, in some instances, half a million of roubles, or upwards of twenty thousand *pounds sterling*, a-year. Two direct

means of a vice-governor's enriching himself are, the per centage upon every vedro or anker of spirits sold in the province, and a certain sum paid by the retailers for their licenses. By these alone, a vice-governor may annually put into his own pocket not less than four hundred thousand roubles. It is the duty of a vice-governor to visit the different distilleries and kabaks, or gin-shops, to ascertain whether the spirits be adulterated: having already received his bribe from the farmer-general of the province, he of course finds no fault. The latter of these gentlemen then makes his own visit, to examine whether the retailers have not still more adulterated it than was allowed in the first instance; the affirmative is a matter of course, but, on a division of the spoils, no fault is found. Lastly, comes the secretary or clerk of the farmer-general, who finds the spirit still further adulterated, and who, having in his hands the power of punishment, even to the withdrawing of the license, becomes a participator of the last spoils. To make up these immense subductions, another and another portion of water is added to the spirit, all of which is valued to the poor peasant as genuine. The oppression, before heavy enough, is thus doubled upon him, as the weaker the spirit the more he finds it necessary to consume. This system of robbery is mainly owing to the palpably inefficient provision made by the government for officers of all ranks, who are thus tempted to seek by indirect means a compensation for their services.

Krasnoufinsk, which I reached next, is situated in a fertile valley, at the foot of two peaked mountains. It is a scattered and ill-built place, but in a fine productive country, and from the top of the *mountains* commands an extensive view of the

river Ufa, meandering from one side of the horizon to the other, but generally immersed in one continuous fog. The town is frequently overflowed, and thence, doubtless, is considered unhealthy. The establishment is new, for the old ostrog, or advanced fortress, is still kept up, to oppose any possible incursion of their southern neighbours.

A deputation of the inhabitants waited upon me, to request I would remain a couple of days, to be present at a dinner to be given in honour of the first Englishman who had visited the place. I felt the compliment nationally, but thought best to decline it, as perfectly unmerited by the individual, independently of my anxiety to get forward; and therefore returned to Achitskaya Krepost; thence to Bisserskaya Krepost, over eighteen miles of uncultivated country, after which I gently ascended a considerable elevation into the bosom of the Ural mountains, where not a vestige of cultivation exists besides young firs and birch. The air was exceedingly cold on the summit. At noon I stopped at the last European station, called Kirgishantsky Krepost, and at the last European residence, where I dined. The good people had resolved I should not leave this paramount quarter of the globe with any trace of dissatisfaction, as young children continually presented me with wild strawberries and cream; the strawberries were of an excellent flavour, and it is the custom of these poor people to present the traveller with such fruit during the season. I received the present, standing with one foot in Asia and the other in Europe, surrounded on all sides by lofty mountains, covered, however, with nothing but brushwood.

In the evening I reached the first station in Asia, called Groborskoy, a post-town; and next day, with a stout heart, descended the Siberian part of the Ural chain to Belimbaiefsky Zavod; or iron-foundery, on the banks of the Tschusova, where there are many handsome buildings. Early the ensuing morning I reached Ekatherinebourg, having passed in safety the mighty barriers which divide Europe from Asia. The ascent and descent are so nearly imperceptible, that, were it not for the precipitous banks everywhere to be seen, the traveller would hardly suppose he had crossed a range of hills. As far as this frontier town of Siberia, I had travelled through one continued forest of pine-trees, and for twenty miles nothing met the eye but fire-wood, grown for the use of the imperial fabrics.

On reaching the Asiatic side of the Ural chain; I could not help remarking that the inhabitants of all the villages were much more civil, more hospitable, and more cleanly dressed; and in no one instance would they accept of money for the food I had occasion to procure. I never entered a cottage but shtshee (a cabbage soup), with meat, milk, and bread, were immediately placed before me unasked; nor could any entreaty of mine induce them to receive a higher reward than a pipe of tobacco or a glass of vodka (whisky). In short, to prevent uselessly troubling the inhabitants, I was obliged to consign my nearly exhausted purse to the care of my knapsack, renouncing the hackneyed and unsocial custom of paying for food. Another remark which attends the traveller on quitting Europe, is the fact of his leaving the land of oak, not a vestige of that tree being visible, I believe, in Asia. The sable is, however, met with, an ani-

mal which is never found to the westward of the Ural chain of mountains. It is also confidently asserted, that mice taken from one side to the other will not survive ; thus, nightingales in Devonshire, sables in America, or martins in Asia, are, I believe, looked for as snow in Equatorial Africa.

Among other proofs of their civility, or rather of the interest which Russians take in foreigners, as well as the means they have of making themselves understood, one very strong one occurred to me in a small village. I had learned so much of the language as to know that *kchorosho* is the Russian word for *well*, but not that *kchudo* was the translation for *bad*. My host being a good sort of a blunt fellow, was discoursing upon the impropriety of travelling as I did. As I could not comprehend him, I was impatient to go ; but he persisted in detaining me till he had made me understand the meaning of *kchudo*. My extreme stupidity offered a powerful barrier to his design ; but a smart slap on one cheek and a kiss on the other, followed by the words *kchudo* and *kchorosho*, soon cured my dulness, and I laughed heartily in spite of this mode of instruction.

Ekatherinebourg is the key of Siberia, and hence a post at which passports are most rigorously examined. Yet, on making known my intention to stop at the house of a Mr Major, an Englishman, and an officer in the College of Mines, I was not only permitted to pass, but, in Mr Major's absence, another lodging was procured me. This was in the dwelling of a Mr Mohr, a low plodding German, of whom there are too many in Ekatherinebourg. It is a well-built city, founded by Catherine, *near the source of the Izet*, containing

fifteen thousand inhabitants. There is a large fabric, belonging to the Emperor, for polishing and preparing vases, urns, slabs, and the like, as well as to deposit selections of mineralogy and precious stones for the formation of cabinets. There are also numerous large iron and copper founderies in the neighbourhood of Ekatherinebourg, the latter of which supply the mint of the city with metal for coining three millions of copper roubles annually. The coin is badly executed, being chipped and cracked the first moment it is issued, nor is the metal better; and no care is taken to select or recoin any of this wretched money. The copper mines are near three hundred miles distant from the city; yet here the metal is worked up into ingots, heated, barred, cut, rounded, cleaned, and stamped; and, lastly, they may be said to barely pay the salaries of the officers and peasants.

Near the city the river is dammed up, so as to form a sort of lake for the washing of the sand which produces the gold; and close to it is the department for smelting that costly metal. This is produced from the gold mines of Berezofsky, distant twelve miles; the quantity produced is, however, small. The moment a fine specimen of pure gold is discovered, it makes its way into the cabinet of some private individual, and such specimens are neither few in number, nor their intrinsic value small. It is justified on the usual ground of the insufficient remuneration of the officers, and at present may be considered as a fair and natural means of the support of government; for the salaries of officers and men, so far from having been increased since the days of Peter the Great and Catherine, have in reality been reduced

three fourths. Then the government paid in *silver* roubles (3s. 4d. sterling); but now in *paper*, the current value of which is 9½d. When the increased value of provisions, and of all other articles, is considered in proportion with what they were fifty and one hundred years ago, it is only fair to put such pilfering to the account of necessity, rather than to that of depravity. Lest in this part of my narrative I may be misinterpreted, I think it but candid and just to tell my readers, that, whatever bribery and corruption exist in the Russian empire, I do not think they exceed that of more civilized (as they are termed) countries. Kissing goes by favour in every quarter of the globe, but I do not think extortion in Russia proceeds so much from avarice as from necessity; the latter has no law nor rule to curb it, and, when backed by an unfeigned and unlimited hospitality, surely the *crime* is sunk in the *necessity* of the case. In the midst of an abundance of natural wealth, it is true the peasant gets but very little reward for very hard work; but as all compulsive labour is reluctantly and badly performed, so that in cold and dreary mines might be expected to be of all others performed the worst, and the least rewarded. Six thousand fine young men are employed in this occupation from morn till night through all seasons; and to sustain, certainly not to reward this, receive a daily allowance of two pounds of black bread, with a suit of clothes and a sum amounting to 13s. 6d. sterling yearly: whatever they acquire beyond this must be by dishonest means. These six thousand individuals produce annually from the mines and sands about seventeen poods of gold, and ten of silver, the united value of which is certainly under L.30,000

sterling ; so that the clear annual profit to the government of each of these able-bodied men, after even these insufficient means of livelihood, cannot exceed 20s. a-head. But for the imperious necessity of procuring a continued coinage, in order to support the immense circulating medium, it may be supposed that the Russian government could not hesitate for a moment to enfranchise these peasant slaves ; as their contribution to the revenue, in the way of direct taxation, would infinitely exceed the paltry profit accruing from their coercive labour ;—to say nothing of the large proportion which must be deducted for the expenses of an establishment requiring so great a number of officers, and probably of costly implements.

At Ekatherinebourg, at the table of the amiable chief, I met a Mr Roper, an Englishman, employed in the mines. After dinner we visited the beds of gold sand. They seemed about six feet deep. The governor appeared to me too sanguine of the results, which can never authorize the employment of such fine young lads in the everlasting washing of the sands, with their feet constantly in water.

From the gold beds I visited the mines of Berezofsky, the principal working one of which, a hundred and sixty feet of perpendicular depth, I descended. My access was, as in other mines, by the staircase, preferring that mode of descent to the more usual one in this place, of being let down by the basket. I saw nothing to remark in the nature or plan of the employment, though I could not but regret that the operators were not, as in South America, criminals, but peasants belonging to the imperial crown. The produce of the mines is in the proportion of one guinea's worth of pure gold for every four thousand pounds weight of

earth. Ninety-six zolotniks are equal to a pound, and three zolotniks of gold are produced from each hundred poods of earth; so that, even allowing forty pounds sterling for every pound of gold, the utmost value of every one hundred poods of earth cannot exceed twenty-five shillings. The sum of the matter is, that his Imperial Majesty gets five thousand pounds sterling annually from the employment of six thousand men, deducting only the payment of his officers, a diminution which, it will be allowed, is not great. So small indeed is the return from the establishment of Ekatherinebourg, that I did not think it inappropriate to say to one of the chief officers, who had asked my opinion, that, were it not for the three millions of copper roubles which the government gained, the whole establishment deserved the air of farther Siberia; instead of copper, it should produce silver, roubles, so inexhaustible are the riches of the place.

The magnificent iron establishment belonging to the Yakovleff family, is much better deserving of attention. Six thousand peasants are attached to it, and at present employed in making bar iron for the fair of Nishney Novgorod, iron plates for covering houses, cast-iron utensils of various kinds, steam-engines, and immense quantities of cutlery, not forgetting the iron images for worship, all finished in a neat and solid manner. The buildings appertaining to this establishment are equally extensive and substantial; and the situation of the overseer, who is a peasant, is worth two thousand pounds per annum! The villages of the peasantry are well built, and much liberality is evident in every part of the concern, which is as profitable as creditable to the proprietor, whose character stands

very high; affording no small counter proof how much the imperial works are neglected, while those of the individual are protected, encouraged, and industriously persevered in.

I have already said that Ekatherinebourg is a well-built city. It indeed abounds in public edifices, bazars, and churches, and is regularly laid out in streets; but the inhabitants generally, even those who may be styled opulent, are *bondsmen*, either to the government, or to private individuals. The greatest proportion of these are Raskolnicks; who some time ago sent one of their own body to purchase permission to build a church for the free exercise of their own abominable tenets. The zealous *missionary* was also charged with four hundred thousand roubles to make good his way; but neither missionary, nor license, nor money, have been since heard of. This conduct, I should think, might be expected from such *zealous and intolerant unitarians of faith*; for whether Greek, Catholic, Protestant, or Methodist, it is one and the same thing—he who *attempts* to interfere with an established religion is no tolerant but a bigot, and what are the most civilized part of the community about?

Quitting Ekatherinebourg, I directed my steps towards Tobolsk, gratified that I had already entered Siberia. After ten miles of pleasant walking I reached the hospitable habitation of Mr Major, where I passed a couple of days in an agreeable manner, with his wife and three daughters, fine young women, and either of them sufficiently beautiful to arrest the progress of a Siberian traveller. Having no time to fall in love, I took, at parting with the ladies, advantage of the Russian custom, which permitted my kissing their hands,

while they at the same time honoured me by saluting my cheek.

I reached the second station late in the evening, and next day, remarking with pleasure the cleanliness and good-nature of the inhabitants, reached Kamishloff. Kaminsky, a useless cannon-foundery, lay in my way. The road is everywhere excellent, over low, swampy, yet well-wooded ground. Kamishloff is a pretty little town on the banks of the Pyshma, a river but little used, by reason of some falls. There are two thousand inhabitants, enjoying a somewhat flourishing carrying trade. I received the kindest attentions from the town-major (a young militaire, who had been severely wounded in the Russian or Napoleon campaigns), and from the inspector-general, who was then going his rounds. Kamishloff is the last station in the government of Perm; a government I felt as little regret at quitting, as I had fear of entering upon my return; it is a place most unfortunately situated—between Europe and Asia, civilization and semi-barbarism—in short, between vice and virtue. To Tumen, the first station, are thirty-six, and to the second twenty-six, versts—thirty-five miles in all. The country appeared well cultivated, upon a soil of black mould. The third station of twenty-five, and the fourth of twenty-eight, versts—another thirty-five miles, I cleared in good time; but with a somewhat awkward indication of ulcers on my feet; a malady, according to my system, very easily and cheaply to be remedied in Siberia. At the last station, a small Tartar village, I was regaled with pork, bread, and eggs, at free cost, no purse being necessary among these Tartars. I partook of the wholesome fare *à la Tartare*, shaking hands first with the host, and re-

ceiving his blessing of "Peace be with you!" then squatting on my hams like the rest of the company. On the third day I reached Tumen, after near forty miles' walking. The town-major kindly received and lodged me in his house.

Tumen is a city of some consideration, and, from its local situation, enjoys a considerable trade with the fair of Irbit, as well as to the south-west and south-east of it. Its population is said to consist of eight thousand, occupied mostly in the preparation and export of timber, tallow, hides, and embroidery. It is situated on the banks of the Toura. It owes its celebrity to Yermak, who discovered and conquered the greater part of Siberia. The environs of the city are fine pastures and corn lands. With this advantage of soil, added to that of its being a depôt, or chancellary, as it is called, of the Russian American Company, for the receipt and transportation of their goods, as well as to enlist volunteers, it may be said Tumen is a place of considerable promise. The banks of the Toura are steep, and the current rapid. The country round is populous, and more than ordinary industry is everywhere observable.

Having crossed a miserable bridge, I reached the first station from Tumen, fifteen miles, where I put up for the night. It was, indeed, a wretched place; but I shall remember it, as affording a specimen of the proficiency I had made in the Russian language. Upon my arrival I demanded the name of the place, and was answered, as I had often been, *Malaya Derevenya*, which I interpreted *little revenue*. In the present case such a name seemed, indeed, peculiarly appropriate, for certainly the place appeared too poor to contribute any *very efficient* support to the resources of the em-

pire. The frequency of the reply, however, induced me here to make inquiry, and I discovered my error, the nature of which, however it abashed me at the time, places me in very respectable company—no less than that of the *justly celebrated* and learned Dr Clarke, who was eternally crossing the river Protok, apparently ignorant that the Protok means neither more nor less than the *branch* of a river.

The second and third stations lay on the banks of the Toura, running through a highly cultivated and pleasant country, with immense herds of cattle scattered in every direction, and the inhabitants civil, polite, and hospitable in proportion to their wealth. During the latter part of this walk, I had followed the custom of the place, the same as that in Spain, where I have often wandered with the muleteers, viz. that of sleeping in the open air. They are, indeed, a set of merry, happy fellows—hail fellow well met, this way or that, rain or shine, hot or cold, nothing comes cross while the beasts can get good fodder, and the moon does not shine in their eyes. A good fire serves at once to cook the provisions, drive away the mosquitoes, or keep off cold.

The following day I reached the fifth station, thirty-five miles. Here are a few dirty huts in a low marshy country. I had crossed the Toura by a miserable ferry; the breadth of the river two hundred yards, and the rate three or three and a-half knots per hour. To the eighth station is still a low country, almost inundated from the late heavy rains, which have done so much damage, that the village of Lepofsky has been completely washed away. With the river Toura constantly at my side, and the rain almost incessant, I reach-

ed the tenth station ; and thence to Tobolsk, where I arrived, half drowned and famished, at three in the afternoon. I had encountered considerable difficulty in crossing the Irtysh, in consequence of the rapidity of the fresh. The view of the city and ancient fortress, on arriving from the westward, is very fine, standing on a considerable eminence which overhangs the river and lower city.

Upon my arrival, I searched out the abode of Mr Rosing, son-in-law to the governor, and brother-in-law to my late kind host, Mr Berg, of Perm. The family were all at the governor's, but receiving a note from me, they kindly invited me to dinner ; my situation, however, rendered this impossible, as I was all but naked. My second apology brought the host himself, who ordered me every accommodation I needed. In the evening, the whole party visited me from the governor's, observing with much kindness on the delay of my visit, and adding the proverb of Mahomet and the mountain. I gave myself up to the enjoyment of this delightful company, and of my pipe and a glass of punch, and could have fancied myself anywhere rather than at Tobolsk.

Formerly this was the capital of all Siberia, afterwards of a province, but now of western Siberia ; a governor-general residing in it, whose jurisdiction comprises that of Tomsk and Omsk, while Irkutsk has also a governor-general, who rules Irkutsk, Yenisseisk, Yakutsk, Okhotsk, and Kamtchatka. Tobolsk is a large and ancient city, at the junction of the Tobol and Irtysh, two noble streams, which, falling into the Ob, assume its name, and are, with it, ultimately lost in the Frozen Ocean. The inhabitants are estimated at twenty *thousand*, composed of Russians, Tartars, and Bu-

charians. A considerable trade is still carried on with China, and Tobolsk may be said to supply all Central and Western Siberia. It has, however, lost much by the change of route, which formerly led through the city; by which change the caravans have disused it as a halting-place on their way to farther Siberia, and on their return, the straight road being from Tumen to Tara.

Tobolsk is the see of an archbishop, who has jurisdiction over all Siberia. It has many handsome churches, but (fortunately) no convents; the streets are paved with wood, and in general the buildings are of the same material. The markets and bazars are well regulated, and the town in general is very clean. The residences of the archbishop, governor-general, and principal officers, as well as the barracks, arsenal, and all public offices, are in the upper part of the city. The position is a most commanding one, a matter of no slight consideration in those times, when convicts were kept in the lower town. Numerous large flocks of cattle are seen in the neighbourhood of Tobolsk: provisions are cheap and abundant; bread thirty-six pounds for a shilling, and the same quantity of meat for three; and hospitality eminently proverbial. But what is, perhaps, more remarkable, very good society is to be enjoyed here, and the strongest features of content are displayed in this hitherto supposed metropolis of barbarism and cruelty.

The truth is, that Tobolsk is not a place where convicts or malefactors are allowed to remain, but people who are exiled from political causes only; the principal part of whom are officers, who have still the privilege of appearing in public, without the loss of either *rank, fortune, or even character.*

The governor has it in his power to befriend any individual, himself becoming responsible for his appearance when necessary ; and as no government transports or banishes *fools*, Tobolsk may very well be, from this circumstance, a highly civilized and eligible place of residence. Malefactors and bad subjects are sent to Tomsk and Nertchinsk.

I visited the celebrated fortress built by Yermak, the discoverer and conqueror of Siberia. Several old swords, muskets, and the like, are deposited here, which for size and weight might vie with the more famous sword in Dumbarton Castle. I also attended an examination at the public military and the provincial schools on the Lancasterian system. The children seemed to have made considerable proficiency in the first rudiments ; the schools, however, are yet in their infancy, though nearly one thousand boys attend. It was, indeed, gratifying to a patriotic heart, to see the institutions of Old England adopted in the heart of Siberia—an adoption equally honourable to us and creditable to Alexander.

The view of the surrounding country from the residence of the governor is really sublime, preserving still its ancient wild magnificence. In front are the noble Irtysh and Tobol, joining their waters from the east and south, and continuing their united course through the black and impenetrable forests, till lost on the verge of the horizon. The numerous pasture lands on the opposite bank of the river, with here and there a smoking chimney, enliven the scene, and render the place, with all its surrounding but distant deserts, a really enviable retreat. Immediately under the eye is the river and lower town, with its regularly intersecting streets ; all these afford ocular demonstration

that Tobolsk is far from being a dull place ; yet, even in summer, the situation is very cold and bleak, being in the latitude of near 59° , and the thermometer, during winter, at times falling as low as 40° and 42° of Reaumur ; while, on the other hand, it is not always free from the opposite unpleasantness of extreme heat.

The climate of the province, generally speaking, is inhospitable, no part but the southern producing grain. The soil is chiefly marl and chalk, except to the north, which is covered with immense tracts of sand. The wood is for the most part stunted in its growth, and such is the poverty of this province, which contains more than a million of souls, that the government receives from it but three millions of roubles net revenue, or one hundred and fifty thousand pounds sterling. Its extent is immense, being from the latitude of 50° to the Frozen Sea, and near one thousand miles in width. The northern districts are inhabited by Samoiedes and Ostiaks, a wild, barbarous race, who live by fishing and hunting, enduring all the rigours of winter, sometimes even without fuel. Fishing is also an active pursuit at Tobolsk, near two thousand people being employed upon the Irtysh and Tobol. The practice is to ascend the streams before the winter commences, catching and drying the fish as they go, and returning to the city with the breaking up of the ice. This employment, besides providing for the maintenance of those engaged in it, yields a very remunerating profit. The embroidery of muslins is also brought to considerable perfection at Tobolsk, introduced originally by the daughters of exiled officers, who had felt the deprivation of their former means of subsistence ; and *it is now the prevailing fashion among*

the ladies. The poorer classes, however, are indolent, and will seldom work beyond what is immediately necessary for the procurement of food; and this may in part account for their suffering some of the richest and most beautiful lands in the world, on the banks of the Irtysh, and towards the Chinese frontiers, to lie waste, while they prefer the deserts and forests of the north. To this inducement, however, must be added that of obstinacy and false pride, and, perhaps, some portion of laudable attachment to their native city, which is termed the grand and ancient capital of all Siberia, and which has been the scene of achievements, equal, if not superior, to those of Cortez.

CHAPTER V.

Brief History of Western Siberia and of its conqueror Yermak—Imalak—Ingeary—Kaminski—Kamisart—Ishim—Tusnabolova—Toukalinsk—Omsk—The Kirguise—Calmucks—Jeliezinskaya—Yamishersk—Poyanoyarsk—Ubinsk—Uvarova—Alexandrofsk—Bouktourma—Krasnojarsk—Maloi Narymsk—Chinese Frontier—The Irtysh—Ustkamenegorsk—Ismayelova—Neighbourhood of the Kolyvan—Kalmanka—Barnaoule—Tomsk—Kioff—Krasnochinsky—Bagota—Atchinsk—Krasnojaisk—Kansko—Ingashe—Nishney Udinsk—Irkutsk.

THE early history of this part of the world is involved in much obscurity, little being known of it prior to the beginning of the sixteenth century, when the celebrated Yermak became at once the discoverer and conqueror of Western Siberia. He had originally been the leader of a numerous and well-organized banditti, who committed great and distressful ravages on the rivers Don and Volga, but which were put an end to after the victories of Ivan Basilovitch over the Tartars of Kazan and Astrakan, when he devoted his attention to the peaceable establishment of his dominions. Yermak was thus compelled to fly, and sought refuge in the north, on the banks of the Kama, where the family of Strogonoff had a factory for the purpose

of barter with the Siberians. The conduct of our hero proved so unlike that of a freebooter, that Strogonoff, during the winter of 1577, provided him with necessaries to subsist his men, and with arms and ammunition to make an incursion upon the Siberians.

The first campaign was in the summer of 1578. Yermak had from six to seven thousand men with him ; but, through his ignorance of the route and want of guides, winter closed in upon him almost before the commencement of the campaign. His route lay along the Kama to the entrance of the river Silvar, where he passed the winter in a small town still named after him.

In the spring of 1579, Yermak returned to Strogonoff's establishment, where he received a fresh supply of arms, including a set of colours ornamented with images after the Russian custom. In the summer he resumed his operations, availing himself of the little rivers Tchsusovaya and Serebranka ; the latter of which brought him to the point whence it was necessary to proceed by land. He was soon, however, again obliged to winter in what is termed a krepost, or wooden fortress ; his forces, meantime, were fast diminishing by sickness and constant skirmishes.

In 1580 he continued his progress along the little rivers Barancha and Jouraslik, where his forces were reduced to one thousand six hundred and fifty men. With these he sailed down the Tagili, and reached the town now called Tourinsk, and there defeated the Tartar prince Epantchy. On the 1st of August he reached Tsaugy, now Tumen, on the banks of the Toura, of which he took possession, and fixed his winter quarters, with only one thousand five hundred fol-

lowers, but inured to hardships, accustomed to victory, and putting implicit faith in their leader.

The spring of 1581 was marked by two victories over the Tartar prince Mahomed Koul. Yermak then marched along the Tobol till he reached the Irtysh, the centre of Koutchom Khan's dominions. His forces were now reduced to five hundred men; yet with these he resolved to conquer or to die. On the 23d October a bloody conflict took place between the armies, when Koutchom Khan and the Prince Meneik Koul were entirely defeated, and narrowly escaped being made prisoners. The scene of action was at the junction of the Tobol and the Irtysh, the site of the present city of Tobolsk. Yermak instantly directed his march against Sibir, the capital of the Tartars, distant twelve miles; and on the 26th October entered it in triumph, received the oath of allegiance of his new subjects, and, from the head of a banditti, became a sovereign prince. The situation of Yermak was, however, by no means enviable. He resolved, therefore, to make a tender of his conquests and further services to the Tzar. Accordingly, on the 22d December, he dispatched his confident, the Ataman Klotsoff, to Moscow, with the news and message. Klotsoff was received with every demonstration of joy; and special marks of royal favour were conferred upon the hero and his companions, together with a general pardon for past offences. Yermak himself was honoured with two rich coats of armour, a silver cup, and a fur cloak which the Tzar himself had worn; the last being then considered the greatest mark of distinction in Russia.

Yermak, meanwhile, was not idle. Leaving a part of his *small force to garrison and protect Sibir,*

which seems to have given name to all the Asiatic part of the Russian empire, he, with the assistance of his favourite, Briazga, extended his conquests to the countries of the Ostiaks and Vogouls, near to Samaroff and Tabarinsk.

In the sequel, Yermak undertook an expedition for the purpose of subjugating the surrounding territories, and annihilating the remainder of the Khan's followers. Attended by three hundred Cossacks of the Don, he reached the settlement called Ambashou; but here he received information which induced him to retrace his steps towards the new capital. He reached in safety a canal which had been cut by his directions as a species of defence, as well as for the shortening of the communication; and here he passed the last night of his extraordinary career.

The inclemency of the weather, the fatigues they had undergone, and the apparent security of the situation, all operated to plunge the party in profound sleep; even the guard was overcome: when Koutchom Khan, who had, cautiously and unobserved, followed and watched his enemy, fell upon them sword in hand. Never was a scene of greater tumult, or a night victory more complete than that gained by the Tartars; and Yermak's whole party, with the exception of himself and one man, were cut to pieces. Finding all lost, Yermak fled to the river, and, in attempting to jump into a boat, fell into the water and was drowned; the weight of his armour preventing his swimming. Thus perished, after seven years of constant warfare, this enterprising and valuable leader, in the night between the 5th and 6th of August, 1584. According to tradition, his body was afterwards found and *buried near the promontory of Bagieshefsk, under*

a large fir-tree, not far from the Irtysh, near which a cross is erected.

For a while the Russian empire in Siberia was at an end, as the remains of a small band, which had been left as a garrison at Sibir, together with the single individual who had survived the late conflict, and told the mournful tale, evacuated the fortress, and returned to Russia. The court of Muscovy were not long, however, before they renewed their designs upon the conquest of Siberia. The intestine commotions and divisions of the Tartar princes, who were asserting their relative independence, offered the best prospects of success; and many of the Tartars were pleased with the conduct of the Russians, and perfectly disposed to join them against Koutchom Khan, who was disliked for his intolerant zeal in propagating the Mahomedan faith. A body of three hundred Russians accordingly penetrated to the Toura without opposition, built the fort of the Tumen, and there waited for reinforcements. The subjugation of Tobolsk and Tara followed; and fortresses were there also established. In the short space of a century, the whole of Siberia, from Europe to the Eastern Ocean, and from the Frozen Sea to the Chinese frontiers, was annexed to the Russian empire. New towns were built, colonies were planted, and settlements established in the most distant parts. Those tribes of Tartars who were not readily reducible to obedience, were at once exterminated; and something like the same merciless cruelty which characterised the Spaniards in South America, was practised in Siberia. Much more would have been done, and the Russians would no doubt have had possession of all Mongolia, had not the jealousy of the Chinese interfered,

•

The Russians had extended their thirst for dominion along the banks of the Amour, and were continuing their subjugation of the Tungousian tribes, when they encountered the Chinese, who were drawn thither by the same object. From jealousy of each other's conquests, these two great powers became involved in a war about the year 1680, and the fortresses on the Amour became alternately the property of each, as the chances of war dictated. At length, however, the Chinese power prevailed, and, at a peace in 1689, the Russians ceded a considerable territory, together with the navigation of the Amour. The value of this river, at that time unknown, has been fully seen since the discovery of Kamtchatka and its adjacent islands, as well as the proximity of continental America, and the archipelago of islands between. This ceded territory, and other valuable points, Russia has never since been able to regain, as, with little exception, the two countries have remained at peace; and thus closes the history of Siberia, till the discovery and conquest of the peninsula of Kamtchatka, which took place in the early part of the eighteenth century.

The above history is in the main a translation of a biographical notice, attached to the profile of Yermak, on a large map, which was presented to me by my excellent friend the governor of Tobolsk. A part of it is also to be found in Coxe's account of Russian Discoveries.

To return to my journey, for which I had been preparing during the three days I was in Tobolsk, by getting a new leathern water-proof knapsack, and deliberating the route to be pursued. I felt anxious to get on as fast as possible, but yet so as *not to miss* meeting the governor-general, who, I

was informed, was on his way to Tobolsk, but not by the direct road, his excellency taking Kolyvan and Omsk in his way. It was therefore determined that I should go first to Omsk, and follow the Irtysh as far as the Chinese frontiers; and thence, to return by the same river, and proceed to the mines of Kolyvan, where it was to be hoped I might arrive in time to meet Mr Speranski, the governor-general. In furtherance of my design, the governor supplied me with a Cossack, and an order for horses, if I should deem them necessary, as well as an open order for all assistance to be rendered me, not only in his government, but as far as the capital of the next; his power being understood to extend from capital to capital.

I bade adieu to Tobolsk, with a grateful remembrance of the kindness I had experienced; and, in company with my young Cossack, pursued the road to Omsk. It is not a good one. The country residences of the governor and archbishop were on the right, as also a large monastery, which I had visited three days before on the occasion of a fete; but the country generally possesses very little of interest. At twelve miles I passed a second monastery, romantically situated, and upon the road to it, many hundreds of people coming from their annual visit to the Virgin, to whom it is dedicated; her ladyship having, during the week, presented herself at Tobolsk to receive her rents. At sixteen miles I reached the village of Imalak, overhanging the Irtysh, which, dividing, forms an island, and in such a manner as to present a double serpentine view. The extent of territory seen from the elevated banks is astonishing and beautiful.

I descended *the mountain* by a steep and dan-

gerous road, then ferried over the Irtysh, passing through a large Tartar village, situated in a fine pasture, with some rye corn, and reached the second station on the lofty bank of the Irtysh. I found the cottages neat and clean, and the inhabitants comfortable, hospitable, and contented ; without hope or expectation of reward for their hospitality to me. Thence to Berezofska the country appears more cultivated and pleasing, with a good deal of fine wood in the valleys. Thence to the Tartar village of Ingeary, on the banks of the Vagay, when I entered a considerable tract of their lands, near seventy miles in extent, but without a single Russian inhabitant. These Tartars are of the Bashkire race. I could not help observing the perfect cleanliness of their houses, the civility of the people, and the good economy of their lands. I slept most contentedly in these dwellings ; feeding upon milk and cakes, but seldom tasted animal food.

The dress of the Tartar women is light, if not neat ; being merely a plain white shift, with a sash round the waist to support the bosom ; besides this they have not a vestige of apparel, except the handkerchief on the head. The young girls had the hair plaited and hanging down like the Biscay girls, or brought up under the left arm, and fastened to the fore part of the shift by a riband. Such is the simple summer dress ; the winter, or gala one, is, however, more tawdry. Their features appear delicate, but their limbs are strong, and their complexion very dark.

At Kamenski I quitted the great Siberian road, not far from Tara, passing several neat Tartar villages, whose white plastered chimneys and ovens *reminded me a little of those in my own country.*

The furniture consists of a few earthenware utensils, and a set of tea-things; one half of the room is elevated above the other about fourteen inches, and that half serves them alike for sitting, sleeping, and store-room. They are particular in having clean bedding, and many pillows; the latter of which are always presented to a stranger to raise and soften his seat, as they have neither chairs nor stools. A Tartar dwelling has always, if possible, attached to it the convenience of a vegetable garden. The women, I observed, never presume to eat or drink till their better or worse half has finished, and then but seldom while in their presence.

Reached Aramashansky, near the Vagay, which winds its waters through many fertile spots. At Kamisart I met much incivility, not being permitted to pass the night in it without having recourse to severe measures; to avoid which I preferred continuing my journey in the rain. This part of the country appears well cultivated, and better peopled; nor is it void of interest,—for the account of its scenery, described in the well-known tale of “Elizabeth, or the Exiles of Siberia,” is, on this point, very correct. Crossed the little river Carasal to Besroucouva, a fine level pasture plain, feeding immense quantities of cattle; thence to Ishim, which I reached, at four in the evening, in a torrent of rain, much fatigued, and my Cossack more so; he was, in fact, perfectly useless.

Ishim, so celebrated in the tale before alluded to, is a miserable town, on the stream of its own name, deserving remark here only for the incivility of the inhabitants, who, with the commissary and the doctor, were all noisily intoxicated. Of course, I could get no attention paid me, either as to lodging or food; *and, though the rain fell in tor-*

rents, I and my Cossack were obliged to pass the night in the market-place.

Next morning we reached a neat village called Borovaya, where I was hospitably entertained by the elder of the village, who also furnished me with horses to Tusnobolova (twenty miles), where the long-bearded guard searched my baggage; alas! it contained little; and for once I felt ashamed at the examination. They did their duty in a civil manner, but I was much puzzled to think what they could be in expectation of finding. The country is open, and laboriously cultivated, and the neighbourhood populous. Much fine wood, and some fishless lakes, are also to be seen. I overtook a party of unfortunates exiled for misdemeanours, and compelled to live in this district, which is hence the general rendezvous of pick-pockets, &c. At the next village I happened to be quartered at the house of a newly-married couple; and I confess I regretted the law which compelled them to quit their bed and room for me. To this sacrifice, however, they submitted in the most cheerful manner, treating me with bread, milk, and eggs, and indeed whatever the house could furnish. Through a succession of happy villages I reached Toukalinsk, over an uninteresting level of pasture land. The wretched external appearance of the cottages is more than counterbalanced by the neatness within; and if half a dozen healthy and beautiful children be any indication of content, then are the inhabitants of this district most happy. The price of bread is one shilling, and of meat three, for forty pounds. The road is, in general, very good.

At Toukalinsk I had the misfortune to lose *what was to me my all*—my passport, papers, and

every protection in Siberia. In vain I addressed the commissary; in vain I offered a guinea for their recovery; in vain I pointed out the rogue who had taken them in the tin case from the seat while I was at dinner. I begged, entreated, insisted, threatened, abused; all was to no purpose; and I was finally constrained to go without them. By this terrible disaster I was entirely deprived of all testimony of myself, my connexions, or the object of my journey, and lay at the mercy of any one who might choose to provide me with large but cheap lodgings.

My now melancholy route towards Omsk was over a similar pasture plain as far as the eye could reach, with scarcely the appearance of a shrub. At Soukofski the drunken postmaster would have made me like himself, but in such rainy and dreary weather I preferred tea. I next crossed over to a little village called Krasnoyarsk, on a stream which unites with the Irtysh, now again visible, after an absence of two hundred miles. I at last got view of the fortress of Omsk, and, having reached the Irtysh, passed from a most dreary into a highly fertile corn country, and, finally, in a ferry over the Om, I entered the city by a neat bridge, at five in the evening.

On my arrival, I of course presented myself to the ispravnick, or head commissary, and made known my loss in as good language as I could. I failed in making him understand me, but he humanely gave me good lodgings until he could procure the presence of one of the military officers to act as interpreter. This was done the next day. In the meantime, I addressed a letter to the governor-general and governor of Tobolsk, requesting an *attested copy* of the documents I had

lost, and which I had taken the precaution to have made there. The police-master invited me to dine with him, though he confessed he could not understand either my object or character. He was, however, soon satisfied by the arrival of an express with my passports, &c. all complete. Thus was I, from a state of suspicion and surveillance, again restored to society. I should be very ungrateful, were I not to do justice here to the conduct of the commissary, who kindly went eighty miles, upon my account, to enforce the return of the papers, which, being in a tin case, induced the party to suspect money was there. All that I had was, however, in my knapsack, and that did not amount to five pounds. I dined the second day with the chiefs of the district, when a committee of the merchants attended to request my acceptance of a commercial commission to the Kirguise and Calmuck's country, being given to understand I could speak those languages, from having formerly traded with them. Here, then, was a captain of the British navy, in the heart of Siberia, converted into a Tartar trader. I humoured the joke, and demanded the per-centage. They made their offer, and my demand exceeding it by from twenty to thirty per cent, I was of course not employed. In the evening, I received a polite invitation from Baron Klotte, the general then commanding the military corps of Siberia. It is proper to observe, that the worthy baron honoured me with this compliment before I had recovered my papers, and solely with the view of benefiting and protecting a stranger. Peace to his manes! he is numbered with the dead, leaving a wife and very large family, with slender means to maintain existence. I passed in the garrison three pleasant days,

conversing in the French language, which I found both ladies and gentlemen understood well. Feasts and fêtes were given to me by the first individuals, all of whom vied in exemplifying to me the boundless hospitality and friendship of their nation.

Omsk is placed at the junction of the Irtysh and Om. Previous to the invention of cannon, it was, no doubt, a strong place, and even at present, considering the means of those by whom alone it can be attacked, may be deemed impregnable. It has a garrison of four thousand men, with a flying artillery of forty pieces. It may be divided into fortress, town, and suburbs. The first is the most considerable, and is in fact a neat place; the buildings, barracks, &c. being constructed generally of brick, and surrounded by a good ditch and mud wall, which will ere long have cannon mounted upon it. The military college is a noble foundation upon the Lancasterian system, and was established immediately on his Imperial Majesty's return from his visit to England. Wonderful proficiency has been attained by several of its pupils, now young men, and the general improvement reflects credit on all concerned in its management. The youth are instructed, besides reading, writing, and arithmetic, in drawing, mathematics, fortification, and algebra, and in some of the Oriental languages. The barracks for the boys, their food, clothing, bedding, &c., are in excellent order; and every praise is due to the attention and benevolence of the commandant, Colonel Ivanoff, who is considered by them as a father. They are composed of the children of the military forming the army of Siberia. The school for the children of the Cossacks is on a similarly benevolent plan, although *not quite so forward*, from the want of

good masters. The town and suburbs have some neat buildings, but are not otherwise remarkable. The united population is seven thousand five hundred.

Omsk was one of the strong places of the Tartars, and successfully withstood the attacks of the great Yermak. The country round is fertile as to its soil, though not extensively cultivated ; it is one vast plain, as level as a floor. The fortress is north, and the town south, of the Om, but both are east of the Irtysh. Opposite is the territory of the wandering Kirguise, presenting no appearance of cultivation or dwellings. A considerable trade is carried on with them, as also with the Calmucks to the south, which consists in the barter of cattle, &c. for tobacco and spirits. Several children of each of these tribes are to be seen in Omsk, who are slaves, having been sold by their parents for a pound of tobacco or a glass of spirits. They are, however, in this degraded condition, better off than when wandering the inhospitable deserts.

The Kirguise are divided into three hordes, all more or less tributary to Russia, although they have khans of their own. They are all wanderers over the countries between Omsk and the Caspian Sea. Their occupation consists in hunting, fishing, and breeding cattle, and of the latter they have immense droves in this vicinity. They are not considered nice in the mode of acquiring them, and have even been accused of kidnapping and selling Christians ; an accusation not improbable from the example set them. They continue only so long in a place as there is forage for their beasts, getting, in winter, as near the woods as possible for the advantage of fuel, though, in most parts, the dried *dung of their cattle* provides a ready and efficient

substitute. I saw one of their chiefs, a good-looking fellow, but very filthy ; and indeed they are in general the most miserable and filthy race I ever beheld, scarcely, during the warm weather, affording themselves a pair of trowsers for mere decency. One large iron kettle, with wooden spoons, constitutes the furniture of their more wretched tent. They are, however, excellent horsemen, and are supposed to be descended from the Mongoles and Tartars. Their language is peculiar to themselves.

The Calmucks, who, like them, make no scruple to dispose of their children upon any momentary distress or want of spirits, are yet a different race, both with respect to features and origin. They are, however, their equals in idleness and filth, and follow the same vagabond way of life. The Calmucks are, notwithstanding, the direct descendants of the Mongoles, who emigrated hither after the destruction of their empire. Very few are subject to Russia, a great part of them living in Chinese Mongolia, while the rest of them, under the protection of Russia, roam about the countries situated between the Don and Volga and the Ural mountains. Their features will for ever mark them in whatever part of the world ; the flat face, small and elongated eyes, broad nose, high cheek bones, thick lips, and brownish-yellow complexion, are sure signs of their Mongolian descent. They are obliging, but inquisitive and dishonest ; yet, with a little Russian education and discipline, they make good servants. I ate and drank with them, as also with the Kirguise, upon roasted meat, without bread, or any thing else, save a glass of spirits and a pipe of tobacco.

Thus much of the two people whom I shall meet upon my *next journey along the Irtysh*. I depart-

ed with a military Cossack, and a protection from Baron Klotte, addressed to all the general, field, and subaltern officers of the army of Siberia, accompanied with a discretionary power to call out horses. I reached the second station, twenty miles, and halted for the night; the third station, Achinskaye, is a large village, with a ditch and redoubt, for defence against bows and arrows. The neighbourhood of the fourth station abounds in horses, bullocks, sheep, and camels. I reached the twelfth, one hundred and fifty miles from Omsk, without any thing of interest. It is called Jeliezinskaya fortress, having a commandant, and garrison of two hundred and fifty men, and twelve pieces of flying artillery, to defend it. It is a neat little town, surrounded by a mud wall and ditch, with a ponderous gateway, which gives it a martial appearance; nor is the situation void of interest, although placed upon a desolate tract,

Where wilds, immeasurably spread,
Seem lengthening as I go.

The distant parts of the Kirguise lands boast some eminences, and a considerable quantity of wood; the road is good, and living cheap, fish particularly being very abundant. The road still lies along the right bank of the Irtysh, and the several villages are purely military, to keep up the communication between the frontier fortresses and Omsk; a non-commissioned officer and twelve or twenty men residing in each. Their dwellings are good, and excellent vegetables are produced in the gardens; a great advantage over the fort of Omsk, where the soldiers have either too much work, or *are too idle, to attend to the production of veget-*

which, notwithstanding they are greatly needed as an anti-scorbutic, great ravages being made by that disorder among the soldiers, who at present subsist entirely on dried meat, bread, and brandy.

I dined with the commandant, a German, and resumed my journey, amongst a number of Kirguise tents, and immense herds of cattle. One of these wanderers I induced to sing; but, though the air was musical enough, its words, as I understood, and the accompanying actions, as I could perceive, were much too obscene. At the fourth station, I was favoured with a drive by a young lass of seventeen; and, if she manages her husband as well as she did the horses and the whip, I should scarcely envy him his fortune; though, indeed, she was a personable girl, and had secured my gratitude by officiating as postilion. The fifth station is marked by much corn-land. I dined with two of the Kirguise chiefs, who had come to take account of their property. Their appearance was handsome and manly; a long robe of blue cloth, beautifully embroidered, and fastened round the waist by a highly-polished silver belt, from which was suspended a dagger, a knife, a pipe, and what in England might be termed a tinder-box; a shirt of coloured cotton, large Tartar trowsers, and boots to correspond; a handsome fur cap, with a small black one under it to cover the clean-shaved head; a long beard, and bare neck. Their horses were well accoutred, and managed by a long whip, which serves also in the driving of the cattle. They were altogether superior-looking young men, of about twenty-five.

At the eighth station, the eye is somewhat relieved from the *sameness of the scene*, a good deal of *wood and pasture land*, with many of the Kir-

guise yourtes and fires, appearing on the opposite side of the river ; an abundance of corn upon this. At the twelfth station several islands in the river, and many fishing-boats, are added to the scene. The youth of both sexes are extremely beautiful, and present the liveliest picture of health ; both go unclothed till the age of twelve, with the exception only of a clean white shift, fastened tight round under the breast.

I reached Yamhishersk, one hundred and sixty miles from the last fortress, which it greatly resembles, although its garrison is larger, being seven hundred and fifty strong. The barracks and officers' quarters, as well as the storehouses, &c., are well built, and kept in good order. The present commandant, a sensible and civil German, supplied me with a bottle of rum, a pound of tobacco, and some bread. I met here also a young Prussian, who was a resident of Moscow when that city was burnt by the French. From that disaster a ruined man, he entered the army, and now presented himself to me as interpreter of various languages, though, of the six he professed, I believe he understood no other than Russ. His good-nature, however, and general obligingness to me, made him an acceptable companion.

To the next fortress is a distance of one hundred and eighty miles, which I commenced next morning, alternately walking and riding as circumstances offered. At fifty miles there are many long, but not very high, hills, and the country is sufficiently picturesque to employ the genius of a painter. The distant horizon to the north showed the Irtysh flowing in a direct course. Nearer hand it meanders beautifully, serpentizing through the pasture grounds, to which some natural hedges

.

gave the most interesting appearance. A solitary Kirguise village of movable tents stood on the centre, the river winding almost round it, and forming somewhat of a peninsula, as in the annexed cut,

the Δ being the site of the dwellings. Vast herds of cattle were grazing beyond the village; the sun was setting as it were in clouds of fire; while the moon, standing in the south, added a peculiar feature to the silence and solitude of the scene.

To the tenth station I trudged over bad roads, in worse weather, and through a dreary and unproductive country. On reaching the thirteenth station, however, high lands to the south began to revive me with their appearance, and break the sameness of the scene.

I stopped at Gloukhof, a little unwell, from having been wet twenty-four hours; a small cabin received me, whose civil landlord and his handsome daughter readily furnished me with bread, rice, and milk, and a comfortable bed. Next day, started for Semipalatinsk, which I reached at noon, having crossed some sand-hills.

Semipalatinsk is also a fortress, with nearly one thousand soldiers and a commandant. It is a neat town, and has a military school upon the Lancasterian system, instructing four hundred boys; a circumstance of pleasing reflection to an English mind, to find the benevolent ideas of his own country adopt-

ed even here, in a tract of country removed by its situation from almost every access to civilization. The establishment is in its infancy, and from this, and a great want of capable masters, exhibits no great proficiency beyond reading and writing. The town, independent of the military, numbers about two thousand inhabitants, who carry on an inconsiderable trade with their southern neighbours. It stands on a pleasant eminence, commanding a fine view of the lofty mountains to the south. I was hospitably entertained by the commandant, who lives in a respectable style. The surrounding country is void of cultivation, and infested with robbers, who commit serious depredations, an instance of which occurred while I was at dinner; a poor pedlar being robbed of two thousand roubles, or one hundred pounds, and his horse, neither of which there is any chance of his recovering. There is evidently something incorrect, but which I could not fathom, in the administration of justice as it respects the punishment of robbers; but there is no doubt that a due per-centage on the lost property, applied in a certain manner, will procure its restoration. This, indeed, appears as open a countenance of the crime as can well be imagined; yet such is the fact. If no fee is given, little exertion is made, and the numerous complaints on this subject have hitherto been of no effect.

I quitted Semipalatinsk late in the evening, and directed my steps for Ubinsk, along the banks of a little stream which gives name to the fortress, and which unites with the Irtysh. I had entered a kibitka which was passing the same way, and at some distance observed the postilion turn off suddenly to the right. My mind misgave me, because *in no instance* before had I deviated from the high

road. I recollected, also, that the Cossack and postilion were both half drunk, and had been in earnest and secret conversation ; I therefore determined to quit by a short movement. It was ten at night, and we were in a low thick brushwood, when, taking my knapsack, I suddenly quitted the vehicle, informing them, as well as I could by signs, and an obstinate persistence not to go their way, that if they were bound as they had pretended they would follow me. I continued alone, and regained the main road ; the vehicle also tacked and came after me, but I refused to re-enter it, and marched on to the next station, keeping them at a respectful distance all the way. On my arrival I discharged the Cossack, without, however, reporting his conduct to the German commandant, as I perhaps ought to have done. My hostess for the night was in a most unamiable temper, seeming to partake of the disappointment of the two fellows ; for which her husband, a corporal, gave her a sound drubbing, with a stick " bigger than his thumb."

In the afternoon of the next day I crossed the Irtysh, after a hard walk of thirty miles. The country low, and wet from smart showers. In the evening I reached Poyanoyarsk, and here first saw melons in this country. These, which are of a prodigious size, form, with cucumbers and bread, the general summer diet of the inhabitants. They sell at one copec each, that is ten for a penny ; a price which certainly does not render to the grower any thing beyond the barest subsistence ; for five guineas I might have loaded a ship with them. I received a great many as presents, but left them as useless to one in my situation. The cucumbers are also very fine, and equally cheap, being one hundred for a penny ; and good wholesome brown

bread at five pence for forty pounds. Whether from perfect hospitality or abundance I know not, I suppose from both, but I certainly never was better entertained.

Next day I reached Ubinsk, a vile dirty place, called here a town. I had before passed some distant elevated lands on the Kirguise side, and here, I think, may be said to commence that chain of lofty mountains which divides the empires of Russia and China. Having procured another Cossack, I continued along the Irtysh for Ustkamenogorsk, the country on the west presenting some fine hill and dale, with mountainous breaks in the background, while the Russian side is still a level steppe. Cornfields lie at intervals along the road to the river Uba, which unites with the Irtysh opposite to a bluff projecting point, and hence occasions a strong cross current and rapid. It was late when I reached it, yet, being anxious to get on, I determined to cross the stream, against the remonstrances of the natives. The ferry, or horse-boat, being out of repair, I was advised to wait at the village; but, seeing a canoe, I determined on trying how far it would assist me. My knapsack and various parts of saddlery I skulled over in safety, with my Cossack, the inhabitants sending their horses at the same time, and actually tying two to the canoe, which had nearly proved fatal to the whole. I, however, reached in safety, and a traveller on the opposite bank gave me the use of his *téléga* to proceed upon my journey, not being himself able to take it across the river.

The night was dull and rainy, but the moon being near her full, we got on tolerably well, and at eight in the morning I reached Uvarova, whence I *again* began to enjoy my travels; for that unpro-

es as they pass the islands with which the river is interspersed. I reached Ustkamenogorsk in early part of the second evening, having crossed a sort of broken chain of hills. The scenery in general was, however, very beautiful and wild; to the right, one of the peaks lifts its snow-clad head, and is visible at the distance of one hundred miles. Ustkamenogorsk is placed in a vast level country, bounded east and west by lofty distant mountains, and the whole forms a rich and striking drama. The fortress is, like others hereabouts, surrounded by a mud wall, yet keeps a commandant and a hundred soldiers in snug but useless quarters, employed in cutting hay, and feeding upon the poor country.

Very fine timber is brought here from a distance of twenty miles, but the country is otherwise sterile.

I quitted it for Boukhtarma next morning. The first station was over a mountainous road, offering the most abundant treasures to the botanist

would be sufficiently apparent from the mere fact of the lesser distance from Pekin to Boukhtarminsk, than from that city to Kiatka and Tobolsk. But the main circumstance is, that, by adopting Boukhtarminsk as the entrepôt of the national commodities, no less than three thousand miles of land-carriage would be saved, as on both sides the produce might go the whole distance betwixt St Petersburg and Boukhtarminsk by water ; the effect of both would evidently be a very considerable saving, principally indeed to the Russians, on which account the Chinese would rather waive their own advantage than consent to the arrangement.

Against this measure it is argued, that the government of Irkutsk would be materially injured. This is by no means clear : and, even if true, the benefit of the public should not be put in competition with that of half a dozen rich merchants, who might still maintain a trade to supply all Farther and Central Siberia. The Russian American Company must be rather benefited than injured by the measure ; and, in short, all the difference to Russia would be, that its European dominions would be supplied with the productions of China at twenty per cent less than at present. The Russian government appear to have had this project in contemplation, though they have not persevered ; a few silks, bricks of tea, and tobacco, being the only articles entered since the erection of a custom-house. No doubt can exist of the advantages arising from so local and beautiful a situation ; it would have the effect of making the banks of the Irtysh, from its source to Tobolsk, one of the most valuable, fertile, and beautiful districts in the universe. Settlers would come from all parts of the

world to establish themselves on its boundless tracts of corn and pasture land. Switzerland has been called free, but will scarcely bear comparison with a country which has no human inhabitant. Nor is the climate bad; 18° of Reaumur's being the extreme; and winter, which begins in November, ending in April.

Having procured a guide, I left Boukhtarminsk for the line of demarcation on the Chinese and Russian frontiers. I first crossed the stream which gives name to the fortress, and then, over a good path, entered upon a most romantic country, near the village of Veronia. It is impossible, without a poetical imagination, to conceive the beauties of such a country; the magnificent and bold sterile precipices, which are seen rising from the great level pasture base, are, I should think, quite unparalleled; and the noble Irtysh, forcing its way amongst the numerous islands near this part of the river, adds to the majesty of the scene. At the village, among other similar luxuries, I was treated with wild currants, melons, cassia, "milk, and honey." Surely this is the natural place for the habitation of man. The banks of the river are indented with numerous well-formed artificial caves, used as ice-cellars. Fifteen miles farther I reached the picturesque village of Cheremshanka, remarkable as a great breeding place for cattle; thence along the banks of the Irtysh, on a good path, over a well-cultivated corn country, I passed Krasniyarki, and at eight in the evening reached Makaria, on the banks of the Narym, a small stream uniting with the Irtysh, in an abundant and fertile valley.

The night was so beautiful, the moon just ascending above the hills, that, in spite of a good

supper which was ready and inviting my attack, I resumed my journey on horseback, in company with the landlord, to Malaya-Narymka, the last Russian spot on the frontier. An officer and a few men, placed here, are all that are left to mark the boundaries of two such mighty empires as Russia and China. I forded the little stream which forms the actual limit, and, seating myself on a stone on the left bank, was soon lost in a reverie. It was about midnight; the moon, apparently full, was near her meridian, and seemed to encourage a pensive inclination. What can surpass that scene I know not. Some of the loftiest granite mountains spreading in various directions, enclosing some of the most luxuriant valleys in the world; yet all deserted!—all this fair and fertile tract abandoned to wild beasts, merely to constitute a neutral territory!

To the first Chinese settlement it is eighty miles; I would fain have visited it, but durst not, without previous notice; and for this ceremony could ill spare the time. Formerly their advanced post was where I am writing this account, and I felt something like pleasure to find myself within the *Celestial* Empire. Their guard was, it seems, removed by the court of Peking, from jealousy of her subjects holding any converse with foreigners. The commanding officer is a banished mandarin, who is compelled to live like the soldiers, being denied both money and assistance from his friends; but as the post is generally occupied by a person who has been condemned to death for some great crime, he is fain to accept his pardon on condition of serving ten years as chief of the guard. They have, I was informed, a neat village, with abundance of meat and vegetables, besides wild fruits.

At peep of dawn I re-crossed the Naryn, and, getting a canoe, floated down to my deserted supper at Makaria, which the hostess had been desired by my companion to keep hot. I reached it at four in the morning, having been carried along by the stream with dangerous velocity. After some refreshment, I again entered the canoe, receiving a brick of tea and a pound of tobacco from my obliging host. He is a voluntary settler, with twenty men under his command, who are all accumulating property. The velocity of the Irtysh soon carried me past Krasniyarki, and I reached Boukhtarminsk at three in the morning of the following day, if possible still more delighted with the prospect; the ever-changing variety of the banks is as rich as the beauty of the inland scenery. The left bank consists generally of bold and lofty precipices crowned with wood, while the right presents a low but beautiful plain, studded with rocky hills, and abounding in corn and hay.

The re-crossing of the Boukhtarma was certainly a hazardous adventure. The passage is hardly ever attempted but in the day-time, as there are many shifting sand-banks, and a tremendous cross current, or rapid, to avoid. This is occasioned by four currents meeting at the same point of the Irtysh, near to the fortress; and so rapid is the collected stream, that nothing but poling the canoe can cross it; and if once the boat be brought within the vortex of the centre, nothing can save it from being swamped.

It was with great difficulty that I prevailed on any of the Cossacks, who, at the best, are but indifferent boatmen, to take me across. After great toil and risk *we reached in safety*:—the fault was *clearly mine had any accident occurred*, but I was

too impatient at the moment either to weigh the matter or to listen to remonstrance.

Arriving early, I roused up my old friend the collector of the customs, with whom I breakfasted and dined. The place is considered unhealthy, owing to the foulness of the water of the Boukhtarma; a mischief, one would think, easily remedied by the proximity of the Irtish, which is only two miles distant; but here Russian indolence supersedes most conveniences. I was informed that rein-deer abound in the mountains, which also contain some sheep. The horns of the former are considered valuable, fetching two and three guineas a-pair; when very young the Chinese purchase them, and extract a favourite medicine; the younger the animal that has shed the horns, the greater the value. All sorts of diet were too cheap to be named, enough to hold out reasonable inducements to emigrate thither.

After dinner I embarked for Ustkamenogorsk, upon the Boukhtarma, descending which I rapidly entered the Irtish, a noble river. The crew of the boat offered up thanks for their safe arrival; we had come through a close and mountainous bluff valley, and certainly there was something terrific in the passage. I need not observe that I was myself thankful, as really the mixing with military sailors was far from pleasant. At midnight, when we had reached fifty miles, several fishing-boats joined company; we left them, however, with courier haste, and I reached the fortress at six in the morning, having been about ten hours descending a distance of ninety miles. The scenery from Naryn to Boukhtarminsk and Ustkamenogorsk, a distance of one hundred and sixty miles, *is upon the whole truly beautiful, though not a*

ing a communication along the banks of the except by boats. Wild-fowl and fish are in almost abundance, as observed before when ing of Tobolsk.

the value of the Irtysh I need say nothing ; it is for itself. Holding an almost uninterrupted communication from the frontiers of China to the frozen Sea, a steam-boat might go from Irkutsk to Tobolsk in a few days, and return twice the time. Wood for fire is plentiful, many establishments might be formed for the raising and felling of it ; while a water communication is ready formed with the Caspian, Baltic, White seas, and thence down even to Tobolsk. The soil, which is a black mould, is exceedingly

It is to the banks of the Boukhtarma that colonies of Scotch should be sent, and indeed such was the intention of the Emperor Paul ; but it was deferred upon the breaking out of a war, and has since been resumed, though there is no doubt at this moment, such settlers would be both attracted and encouraged. No part of the world offers greater or more certain advantages to the

the liberality of the Russian government. In him I saw the first instance of a Frenchman's forgetting his own country; he seemed entirely divested of the patriotic affection which that fickle nation are supposed to possess, but which, perhaps, generally exists more in appearance than in reality, as wherever a Frenchman can do best, there he will settle.

I asked him if he ever intended to return to France? His reply was, that "France was nothing to him." I asked him why? He looked at his wife and large family of marriageable daughters, shrugged up his shoulders, and said, "*Que voulez vous que j'y fasse?*" and, heaving a sigh, left the room. Yet, in spite of his teeth, he was still a Frenchman, for the first words upon his return were, "*Ma pauvre France!*" I had touched a tender string, and, although he is now resigned to his fate, he says that he has been a "*bête*" for marrying, and begetting an entail which he cannot quit. His society, during the few hours that I enjoyed it, was very agreeable.

In the early part of the evening I again embarked on the Irtysh for Ubinsk, the distance being eighty miles,—yet I arrived there early in the morning. The view of the country is various, the prospect more pleasant and open than higher up, and some prettily scattered hills on the plain, which attended me for thirty miles, when the banks of the river became low and flat; and except some hills, very distant to the west, every thing reminded me that I had again entered upon the steppe desert. I enjoyed an hospitable and wholesome breakfast, even at such a dirty place as Ubinsk; indeed it presented nothing of interest *but the good and modest looks of its female inha-*

I procured a Cossack to attend me to the station, distance two hundred and twenty miles; the station towards which was to Chamanai, twenty-five miles, over cornfields and along the bank of the Ulba, which I was now more comfortable in crossing than before, the large ferry having been repaired. Passed a large silver village, called Michailofsky;—the country being hilly and barren, except on the banks of the river. One occurrence in this district powerfully recalled me to Europe, for I dined at a public-house, and was expected to pay for my dinner, the first time since my arrival in Siberia. The fare, however, so great a thoroughfare, that it was a considerable business to prepare provisions for the thousands of carters who are employed in transporting the ore to Kolyvan and Zmeyerov. At still these inns boast so economical a system, that in no instance had I to pay more than one penny (one penny) for as hearty a meal as I desired,—a meal which was made of bread, vegetables, and beer, or kuass. I have no objection in asserting, that one penny of Siberia is equal to one shilling of England.

The next station is a good road of twenty miles over a well-cultivated country. On the second day I reached Zmeyeva, twenty miles farther, after a heavy rain, and over a hilly country. It was a very uncivil and inhospitable place. I arrived at seven o'clock, exceedingly wet and fatigued, presenting myself to the police-master, was refused three lodgings, all of which refused me on my distressed appearance. I again returned to the police, and seating myself down on the door-sill, as it was, made my supper of melons and radishes, with a glass of spirit from the kabak;

in this condition I was found by the police-master, who had heard of my being refused entrance. He accompanied me to the master of the house, whom he reprimanded, and actually turned the owners out of the best room to make accommodation for me. I felt averse to such conduct, yet knowing the custom of the country, and feeling what a night it was, I would not interfere, and, therefore, after partaking of tea, which in this country is soon provided, lay down with my Cossack,—a mere useless fellow.

Next morning I found the master and mistress of the house as civil as they had been the reverse, providing me with all I wanted, and even begging me not to be angry at their unintentional error. Zmeyeva is a large but scattered place, next in rank to Barnaoule, in the government of Kolyvan. It numbers from five to six thousand inhabitants, all in thriving circumstances. It has many valuable silver and copper mines in its neighbourhood, and a considerable government establishment is kept up for their use, and for reducing the ore to silver, which is said to be found here purer than in any other part of the government; but I did not wait to view the works, being anxious to reach Barnaoule. Arrived at Saukas, I discharged the Cossack, as a saucy and useless fellow, who had flattered himself I could not do without him. In general they are more plague than profit; though I am willing to make allowance for the unpleasantness of travelling with a capricious stranger, and this too in rainy weather and over bad roads, without being permitted to ride but at his pleasure. In the evening I reached the river Kolyvan, beyond which is a romantic-looking country, inhabited by a wild Raskolnick race, who seemed inclined to try

long I could travel without food. They are remnants of a people banished by the Empress Catherine from Poland, about the time of the first dismemberment in 1789. I was, however, fortunate in getting a lodging at the abode of an old soldier who had lost both his legs, although the society consisted of fifteen ironed convicts bound to the mines of Nertchinsk as deserters from those of Kolyvan. I was too glad to get here from the inclemency of the weather, and anxious, to feel much care about my present any.

I reached the fifth station over a flat pasture passing and meeting the greatest variety of sledges which I have ever seen converted to one use, all of which are employed between the mines and Karnaoule in carrying the earth and ores. The sledges, télégas, canoes, coffins, covered carts, and sleds, are alike occupied; the covered carts have sledges attached to them, and belong to the government and are used expressly for conveying the valuable specimens. I inquired into the condition of the people, but could only learn that he who had most horses and carts was best off. Having crossed the little river Aley, I was hospitably entertained at the sixth station by the elder of the family, whose mother is a German; we contrived to become intelligible to one another, and he was so good as to send me with his horses the next morning to the eighth station, near forty miles of arduous and slippery roads. I got to the river Kama, at the ninth station, and, crossing by a simple wooden bridge, entered a fine open country, the flowing majestically in the fore-ground. The vegetation was conspicuous in every direction; immense forests bounded the distant horizon.

At Kalmanka I was almost knocked up and tortured with an insufferable headach; my very eyes seemed a plague to me; I was, in short, so ill as to refuse all nourishment. Fortune threw me into the habitation of an old, civil, and humane man, who, seeing my condition, kindly put me into his own bed, giving me also some warm tea, and a couple of fox blankets. I slept well, and arose next morn in every respect, except weakness, as if nothing had ailed me.

With my knapsack on my shoulders I bade adieu to my kind host, and reached Barnaoule in the afternoon, eighteen miles; the neighbouring country one vast pasture, enlivened by some fine wood, and villages enclosed within cultivated lands. Upon nearing the city, the soil becomes changed from a black mould to heavy sand, and the face of the country is converted from uninterrupted and picturesque cultivation to a thick forest of pine and fir. Descending the hill to the southwest, Barnaoule has a neat and remarkably regular appearance, being situated on the Obe, just at the point where the little river Barnaoule enters it. I waited upon the police-master, procured comfortable lodgings, passed the night well, and then paid my respects to his excellency the governor (Froloff), who, with his amiable lady, showed me every attention during my stay, and insisted upon my making their house my home.

The governor was good enough to accompany me to the different public works, all of which I found in the best state, and was highly gratified at the inspection. Indeed the order and proper feeling of the government of Barnaoule might be made a proverb; the work in the mines, and all the departments, being carried on day and night. The

metal is wrought into ingots, and in that forwarded to St Petersburg; but the copper coined to pay the salaries of the officers and men. The money of Barnaoule is far superior workmanship to that of Ekatherinebourg. There are thirty-two mines belonging to the Emperor, and more are continually discovered, so that the whole district may be said to be silver. They produce upon an average, twelve hundred poods of silver, which, in consideration of some gold mixed with it, is equal to four millions and a half of roubles, or two hundred thousand pounds,—no trifling sum to Russia from so small a province. The expense of the establishment, including the maintenance of the officers, &c. is about one million and a half of roubles; which is nearly defrayed by the duties, and tributes paid by the Calmucks in passing from the southward. The establishment therefore, certainly produces a clear revenue of half a million.

Eighty-two thousand inhabitants which the government contains, independent of thirteen thousand employed entirely to the works, fifty-five thousand, or two-thirds, are obliged to be constantly at work, during twelve hours out of the twenty-four; the first week during the day, and the second week during the night, and the third week the day, and so on. The third week is allotted for the working of their lands, and they owe to the goodness and humanity of the Emperor's chief, who has in many respects ameliorated the condition of the unfortunates under him, and who will be recollected, are, like those at Ekatherinebourg, not criminals, but peasants belonging to the Emperor.

The wages and profits derived from this very work, *carried on day and night*, are almost

too trifling to name; but a little reflection will show that their condition is far from wretched. Their direct profits depend upon their actual labour, as he who has most horses, or carries most loads from the mines to Barnaoule, receives most money. They have also ample time to work their lands, and reap abundance of corn and vegetables. Scarcely any full-grown man can be found who has not two or three horses and as many horned cattle, employed during the season in carrying the ore, for which they receive at the rate of thirteen copecs the pood—one penny farthing for thirty-six pounds. Many of them prefer this employment, and are actually able to save considerable sums of money in it, especially those who have many horses. The plan is this :—

The journey from Zmeyeva to Barnaoule occupies nine days, and allowing the same time for rest and returning, eighteen days are consumed in lodging twenty poods of earth, which is the average of each horse; and as each pood pays thirteen and a half copecs, he receives two hundred and sixty-five copecs, or about two shillings; a sum here sufficient to maintain one person in bread and meat for thirty days, at the rate of one pound and a half of meat and three pounds of bread a-day. This calculation is on the supposition that each driver manages but one cart, when, in fact, they sometimes have the charge of ten and fifteen, the profits of ONE HALF of which are equal to a rouble a-day, a sum sufficient to maintain at least ten people in bread and meat—to say nothing of their other means in the produce of two days' extra work in each week. But this is not all; many of the carters, who do the work of others, receive one *hundred and fifty roubles a-year* for that service;

no question can therefore possibly arise of the flourishing state of the government of Kolyvan.

The quantity of earth brought to the works of Barnaoule in the course of the year, is four millions of poods. Each pood producing one rouble of clear profit gives the revenue already stated ; two per cent is added for the quantity of gold, and seven for the value of copper, two hundred and fifty thousand roubles of which are coined. The carriage of so immense a quantity of earth is about half a million of roubles, or twenty-five thousand pounds, about one-third of the whole expense of the government of Kolyvan. Twelve thousand horses and oxen are employed, and about fifteen hundred labourers—an average of eight horses to each.

The quantity of cultivated land is two hundred and fifty thousand English acres, from which one million and a quarter of poods of flour are produced, belonging entirely to the peasantry. The produce of vegetables is also wonderful, and the immense herds of cattle keep down meat at a very low price. That of provisions was as follows :—white bread, seldom used, sixty copecs, or sixpence for forty pounds ; ordinary bread, that used by all classes, threepence for forty pounds ; excellent beef, fifteenpence for forty pounds, or two pounds for three farthings ; and vegetables, eggs, milk, butter, &c. for the merest trifle. House rent is very cheap, and society is good. The town is well and regularly built, having many handsome edifices of brick as well as of wood, and upon the whole it is a most desirable place for residence. The city contains about eight thousand inhabitants ; and although the situation is not particularly beautiful, it has *still many advantages*, being placed in

a noble forest, which serves at once for building and firing. There is a neat promenade in its only square, which is likely to be much frequented. The governor depends solely on the cabinet, to whom, as at Ekatherinebourg and Nertchinsk, the reports are made; not even the governor-general can interfere. It may be compared in rank with a vice-governorship.

Upon my arrival, I found great preparations making to receive his excellency Mr Speranski, the governor-general, who was making the circuit of all the governments to inquire into abuses, he being possessed of unlimited powers. His excellency arrived in the course of the second day, and was received with the respect due to his rank, integrity, and virtues. Two sumptuous dinners were given by the chief of the district; the gardens were illuminated, balls were assembled, and every one was happy. I, of course, shone a conspicuous object; indeed, I was honoured with the friendship and confidence of both those gentlemen. Of General Speranski I will only say, that I have never seen more true greatness of soul or goodness of heart. There is in him a certain condescension and affability, and at the same time a certain air of nobility, that strikes all who approach him with awe and respect. Of his personal attentions to me I shall ever feel proud and grateful. He had at first taken me for a Raskolnick, from my long beard and longer golden locks; notwithstanding I wore at the same time a long swaddling grey nankeen coat, and a silken sash round my waist; but indeed so great a buck had I become of late, that I hardly knew myself. As to my shoes, they were better than new, although seven years had elapsed *from the time that Baron Bode had first used them.*

To return, however, to the governor-general. He told me that there was an expedition on the river Kolyma, fitted out purposely to solve the question regarding the north-east cape of Asia; and his excellency kindly offered me his permission to proceed with it. Too glad to accept a favour of the kind, I instantly closed with the offer, and determined not to wait a moment in Irkutsk and Yakutsk beyond the necessary time, but to proceed immediately to the Frozen Sea, either to share the fortune, good or bad, of the expedition, or, in case of any impediment from jealousy, to withdraw and follow some other plan. The governor-general supplied me with various orders and recommendations for whatever places I should visit, as also an open order "To the judges of towns and provinces, to the members of the provincial courts of justice, and to all commissaries in the government of all Siberia," recommending "that the bearer, Captain John Cochrane, of the British Royal Navy, now travelling through Siberia, should obtain every lawful protection, defence, and hospitality, and that every aid within the power of the towns and provinces should be afforded him, in case he should stand in need of them."

With the above valuable recommendation, almost amounting to a command, and a Cossack, I departed, from a town which I still think the happiest, the best governed, and neatest in Siberia, for Tomsk, taking the road towards Gumba, through ten miles of sandy and thickly-wooded country, along the left bank of the Obe. I crossed that river the next day, on my way to Osokiena. There are in the neighbourhood some silver pits, and some *lakes*, but no cultivation whatever. I

reached the fifth station on the second day, constantly in a thick forest of noble pines, passing many lakes, as well as small rivers, all uniting with the Obe. On arriving at Wasiugan, my Cossack gave me a proof of his utility by getting drunk, and losing his pipe and his cap as well as his senses, in which state, therefore, I left him to shift for himself.

Upon reaching Bazillofka, the country improves, and the villages are pleasantly distributed. The inhabitants were all shivering with the cold, though wrapped up in furs ; while I, in my nankeen, experienced no inconvenience. The view of the country did not change until I reached Prosokova, where some well cultivated hills make their appearance. My Cossack overtook me, and, after many professions of contrition, obtained his pardon, and got drunk immediately upon the strength of it. At Verushina I got sight of the Tom, winding over a well-cleared country, but sadly bare of inhabitants. I was again overhauled for contraband goods. From thence to Tomsk are thirty miles, where I arrived early the following morning. In the latter part, the country bore the appearance of a desert ; wood had disappeared, and cultivation had ceased, although the road was fine.

I presented myself to the vice-governor, brother-in-law to Mr Berg of Perm and Mr Rosing of Tobolsk, my former hosts. Here also I got well lodged ; after which I called on his excellency the governor Illichefsky, with whom, and his amiable family, I passed my time pleasantly. The governor presented me with fifty roubles, a watch, a pair of spectacles, and some few articles of wearing apparel, making part of the effects of *which I had been robbed near St Petersburg—thus.*

verifying my observation to the governor of Novgorod, that the robbers would be found, but not before I had reached the heart of Siberia, where I now was.

Tomsk is a city, and capital of a province of the same name, containing five hundred thousand inhabitants, while there are about nine or ten thousand in the city, which, in spite of several churches and many handsome edifices, public and private, is a most miserable place, yet showing every hospitality and kindness to travellers and strangers. The society also is, I am afraid, far from good, owing to the bad example from those whose rank and situation should produce other effects on their inferiors. The town is on the right bank of the Tom, near its mouth, at the foot of a hill which protects it from the north-east and south-east winds. During May and June it is greatly subject to inundation from the river.

Tomsk has a military school, with four hundred students, backward enough in their education, as also a provincial college without masters or scholars, though a considerable revenue is attached to it. Indeed, the only praiseworthy object is a very neat public garden, in which is a building for balls, dinners, and the like; and on this day, 30th August, both were to be held in honour of the Emperor's name-day. I declined the invitation to this fête, from anxiety to get to my ulterior destination. Of the five hundred thousand inhabitants, about eighty thousand pay taxes. The gross revenue is, I believe, about three millions of roubles, nearly the whole of which is necessary to support the government, thus yielding little or no return to the Emperor. It appears useless as a government, its

best service being to keep the roads in repair, and to mark the half way between Tobolsk and Irkutsk.

While the province of Kolyvan, at present independent, was attached to the government, it made indeed some returns ; but that branch being lopped off, the parties in office, high and low, appear to have given up all idea of being of service, and have since done less than nothing.

Except in point of locality, Tomsk does not appear an eligible place as the seat of a government, which it would certainly be preferable to remove to Yakutsk, dividing the intervening space between Tobolsk and Irkutsk, deducting from the latter all beyond Kirenga on the Lena, and from the former all west of the Irtysh and Tobol, and only south to Ishim ; creating Ekatherinebourg and Barnaoule into distinct governments, so that the boundaries of the latter should be all the country south of the great road. Yakutsk would then be the most extensive government in point of territory, holding the command even of Kamtchatka, instead of Irkutsk, as at present. The duty of a governor of Irkutsk, and that of a vice-governor, are much too great to be united, and no possibility exists of completing any year's accounts within the year.

I witnessed at Tomsk the sale of thirty tolerable sized bullocks for four hundred and eighty roubles, or about eighteen pounds sterling ; excepting only at Mexico, I have never seen another such instance of cheapness and plenty. The province, however, does not produce much bread, being too cold and exposed ; that commodity may therefore be deemed dear at its present price of a rouble (or tenpence) for forty pounds. I departed for Irkutsk in company with a Cossack, and furnished with a *discretionary* authority to procure horses, as also

an open order for every attention to be shown to me, I passed over a dreary and woodless flat waste, until I reached Kolionskaya, eighty miles. The villages had been numerous, but miserable in the extreme, excepting those inhabited by Tartars. They are Mahomedans, and, like those of Tobolsk and Tara, of the Kazan race. From Kolionskaya the country appears to rise a little, but the road was most execrable, nay, almost impassable, either by man or horse. The wood is now of tolerable size ; birch, fir, larch, pine, and poplar ; but there is little or no cultivation, and no appearance of industry, the inhabitants being a lazy set of exiled Russians. The care of cattle, and the raising a few vegetables, together with the transport of merchandise for the merchants, almost exclusively engage their attention, when they are not employed in drinking ; and the women have quite enough to do to find their lazy husbands in provisions and clothes.

Such was my route the next day to Krasno-retchinsky, one hundred miles. Almost each village is favoured with a small river, many of them with considerable ones ; yet the road has little or no interest, and the villages are composed of half-finished huts. From Batoya my journey was rendered unpleasant, through a misunderstanding with my Cossack, who, meeting with an old crony, had requested to stay supper. I consented, being hungry, under the expectation of being asked to partake ; but finding myself disappointed, I hurried away. He followed, grumbling, and giving me at intervals a good deal of impertinence,—a thing, I must confess, very rarely tolerated in Russia. Next day I reached Atchinsk, pleasantly situated on the banks of the *Tchnlym*, in a hilly country, with its

two costly churches, some good houses, and two thousand five hundred inhabitants. It can yet barely be called a town ; it is at least a very miserable one.

I proceeded through it, and many villages, till I reached Krasnojarsk, distant eighty miles, over a road, with little exception, almost impassable ; that part which lies between Chornaretsk to Mallo Kemtchoutska is so bad, that I know of no better punishment to call the faculties of the director-general of the roads into exertion, than making him ride the distance of fifty miles every day in a téléga ; if that did not recall him to his duty, I think nothing could,—at all events, it would be no sinecure. For my own part, my bones were so shaken that I preferred walking. The stages are also too long ; a fault, however, in the course of remedy, as new villages are springing up at every eight and ten miles.

At Bolchei Kemtchoutska I met the caravan with teas, silks, and nankeens, from the Chinese frontiers, bound to Moscow, consisting of some hundreds of carts. The hilly country continues as far as Zeledeyeva, to which place it is a dreary wild ; but thence a fine open country begins, the hills to the north-east exhibiting .. laborious cultivation even to their summits.

It was five in the evening when I entered Krasnojarsk, veiled like a nun—no bad remedy against the effects of the mosquitoes ; and although the appearance seemed strange to me, I persisted in following this custom of the natives. The last stage upon approaching this city is richly luxuriant on both sides, with the Yenissey rolling its picturesque course over a soil rich and well cultivated, *and the vicinity may boast situations for the dwell-*

ings of a prince, peasant, or philosopher. The little river Katcha winds at the foot of the north-western hills, and, uniting with the Yenissey, forms an interesting object. The town stands at their junction, on a low, flat, sandy peninsula, and from the course which the river is now taking, threatens in time to completely inundate it; the principal church, which formerly stood in the centre of the town, being now actually in water.

The Emperor Paul had it in contemplation to plant here also a Scotch colony, but the project, like that before mentioned, and for the same reason, was set aside. His successor, Alexander, has attempted in vain to follow up a plan every way so desirable: first, to the individual emigrants, who would enjoy fine lands, with few taxes, and a free exercise of their religion; and, secondly, to the Russian government, as they would have thereby become possessed of individuals skilled in the process of agriculture in general, and who would have furnished the most valuable examples of industry and economy. The town is said to contain three thousand males; but the site is considered unwholesome, owing to the vapours which rise from the Yenissey. The extremes of heat and cold are from thirty-two degrees of heat to forty of frost; fevers are prevalent in the town, but in the neighbouring valleys the air is mild and wholesome. These valleys abound in fine timber, and are highly productive of the necessaries and comforts of life; excellent beer is also an article of great consumption, while corn brandy may literally be termed dirt cheap. So abundant and cheap are all kinds of provisions, that they find their way even to Kamtchatka. Bread I saw sold at 16

copecks, equal to $1\frac{1}{2}$ d., for 40lbs., while meat was but 2s. 6d. the same quantity.

I was hospitably entertained by the police-master, who supplied me with bread, rum, tobacco, tea, and sugar, sufficient to last me to Irkutsk. Crossing the Yenissey, which is a quarter of a mile broad, I reached Kanskoy, about one hundred and thirty miles, over a tolerable road, and in many parts well cultivated country; the villages are scattered at every ten and fifteen miles, but there are few dwellings off the great road. At Kliutchy, my Cossack exercised his high powers in giving the elder of the village a sound flogging, for his dilatoriness in providing him with a horse. This power is vested in the Cossacks by a custom of long standing, but which calls loudly for redress. In the end, I arranged the matter by giving the old man a glass at the kabak.

At Kanskoy I dined with the commissary, late a schoolmaster, who spoke the French language. He presented me with a considerable curiosity, being part of the jaw-bone of a mammoth. I drank tea with the chief of the farmers, a genteel young man, twice a widower, who has a good house and better furniture. Continuing my route, I soon arrived at the frontiers of the province of Irkutsk, which is divided from that of Tomsk by the river Kan, which might with some propriety be denominated *Styx*, as the convicts who cross it generally remain for life. Should they desert and be brought back again, their punishment is indeed severe,—being liable to all the penalties which by the laws of England might be inflicted upon an outlaw. The peasants are naturally on the lookout for them, and by force of cudgelling, attended *with the application of the epithet* “varnack,” or

“base fellow,” compel them to return. The term has been said, not improbably, to be used in allusion to Yermak the conqueror, but I shall not attempt to decide the point.

Upon entering the government of Irkutsk, the weather became cold and windy, or what is here called a Bourea, being, on the authority of the schoolmaster, derived from the Greek word of the same import,—to an explanation of which I was obliged in courtesy to listen before I could be allowed to move. Having got clear, I continued my route to Ingashe, the largest, neatest, and most regular village I have ever seen. The improvement upon entering the government of Irkutsk is, indeed, wonderful. The attention, regularity, and order, as well as cleanliness, every where to be seen, reflect the highest credit on the police and late governor of Irkutsk. This gentleman has, however, been superseded and arrested by the governor-general Speranski, and is now under trial at St Petersburg upon very serious charges. I saw many instances of the excellent state of the police even in the villages on the high road; neither dog, nor horse, nor cart, nor any species of manure, being allowed to remain in the streets, scarcely even for a moment. The inhabitants of these villages are mostly exiles for minor offences, and are settled in villages on the high-road, and compelled to pay yasack, or the Siberian poll-tax.

As I proceeded, the road improved, and the country appeared more fertile and picturesque; much fine timber is every where to be seen, the ground still continuing on a gentle ascent, and I reached Nishney, viz. Lower, Udinsk, receiving every hospitality possible. It is a small but rather a neat town, of three thousand inhabitants, plea-

santly situated on the Uda, at the foot of a considerable range of elevated table lands. A complete forest of fir, birch, pine, larch, poplar, and all such wild productions. Passing through Kingui, a Tartar village, I continued my route in rather a melancholy mood,

For the thoughts we cannot bridle,
Force their way without the will.

Amid beautiful scenery and much cultivation, a well frequented but dangerous road, broken with villages at every eight or ten miles, carried me to an imperial village, where there is a celebrated manufactory of cloth; being night, I had not an opportunity of visiting it, but the cleanliness and beauty of all the buildings form a strong presumption in its favour.

Bilbetie is a large village at the conflux of three rivers, where an excellent ferry is established, previous to the passage of which I had occasion to demand horses. There were at the port station only enough for one kibitka, and they had in part been promised to a junior rank, *i. e.* to a subaltern officer. The postmaster, observing that neither of us were much incommoded with luggage, very properly proposed that we should go in the same vehicle; the officer refusing to come into these terms, the horses were put at my disposition, and I continued on for the last stage towards Irkutsk, in high satisfaction with every thing I had seen, so superior to the governments of Tobolsk or Tomsk. The country, however, has latterly appeared less picturesque, being a sandy soil. On my approach to the capital early in the morning, a thick fog hovering on the Angara precluded the view of it, *till I reached the monastery near the river; coast-*

ing which, I suddenly observed, over the dense atmosphere, the churches beautifully reflecting the sun's rays from their tin or copper casings. I crossed the ferry, and at eight in the morning entered the hospitable habitation of the chief of the navy in the city of Irkutsk.

CHAPTER VI.

Irkutsk—Vercholensk—Kirenga—Vittim—Jerbat—The Tongousians—Olekminsk—Bistack—Yakutsk—The Lena—Mieza—Aldan—The Toukoslar—Baralass—The Sartar—The Bouroulak—Tabalak—The Tostak and Dogdoa—Kabbregah, &c. rivers—The Rasoka—The Biekhall and Bludenayah—The Chouboukalah, Galanimah, and Indigirka—Zashiversk—Brousniekah—Sordak—The Alazea—Middle Kolyma—Malone—Nishney Kolymsk.

THE commandant of the navy received me in a flattering manner; I had the offer of several other residences, but he being a single man, with a large government house, I was induced by these circumstances to stick to the profession, and take up my abode with him.

Having made myself as decent as my limited wardrobe would allow, I called on the vice-governor, there being no governor, who made great promises, and exceeded them in performance. Upon quitting his excellency I made some visits, and delivered my letters of recommendation, made inquiries as to my future movements, and then returned to an elegant dinner with my host, who had invited a party of twenty persons to meet me; indeed, the hospitality and attentions which were

showered upon me in this stage of my journey, were such as, I may fairly say, I could have experienced in few, if any, parts of what is called the civilized world, especially when the humbleness both of my appearance and pretensions is considered; even the ladies condescended to visit the abode of my host—a single man—doubtless out of respect to me. The company consisted of the same individuals whom I afterwards met at almost every party, with hardly any variation; namely, the commandant, his lady and sister; the colonels of artillery and infantry, with their wives; Captain Koutigin; a rich merchant, who farms the sale of spirits, and his wife; the head of the Russian American Company, with his wife and two daughters; and a Mr Gedenstrom and wife, who had travelled on discovery across the Frozen Sea, in 1809, 10, and 11. Besides these, the parties were enlivened by the company of doctors, secretaries, and half-a-dozen young civil officers, being in the highest rank of society. I retired from the first day's fête at an early hour, thankful for the many favours so liberally heaped upon me.

Next morning, in company with Captain Koutigin, I left the Admiralty House, which is two miles from the city, to view whatever is notable in Irkutsk. The number of them is small, and they are widely scattered. Fifteen thousand inhabitants, including three thousand of the military, are said to compose the population. Irkutsk indeed scarcely deserves the name of city, except for its public buildings, which are good; yet though I confess it is upon the whole a fine town, I could not but feel disappointment from its total want of original plan, as well as its present want of regularity, which must retard its advancement for a long time.

to come. Tobolsk is certainly its superior in every thing except its situation, and the singularly fine appearance of a few buildings, public and private. The streets are wide, and run at right angles, but there are in some of them gaps of two and three hundred yards, without a building. There are, however, many fine points of view ; and when it is considered that Irkutsk has been raised into a government and city only within these forty years, its progress towards improvement must be acknowledged. The houses are for the greater part of wood, though many are of brick, and constructed in a superior style of architecture.

Of the churches there are at least a dozen, which not a little contribute to the splendour of its appearance ; and though they boast of but very few relics, I feel certain that their bishop fulfils his functions as creditably as any other man of his profession. His eminence did me the pleasure to invite me to a public breakfast, given in honour of the emperor's coronation, which I attended, and was highly satisfied with his conduct in every respect.

With my friend, Mr Gedenstrom, I conversed about my plans. He appears to be one of the ablest men in Siberia, and, although rather under a cloud at the present moment, is highly worthy of respect and consideration. He had formerly served as private secretary to Count Romanzoff, when that nobleman was chancellor of the empire ; but either some misunderstanding, or some misadventure, occasioned his removal by the imperial government, to another scene of action. He was lately commissary of the most lucrative quarter, as a reward for his perseverance and diligence when employed upon the Icy Sea discoveries. I am not *aware* that any account of his services has been

made known to the public, but I am fully sure they deserve to have been. It is only mentioning a part of them to say, that he has surveyed all the islands bearing the name of New Siberia, as far north as the latitude of 76° , and has been longer and farther on the ice than any other traveller. Few men in Siberia have more general talent of any description, and, through his kindness, I was favoured with a fund of the most interesting and important information.

During the short period of my stay in Irkutsk, I was variously employed, either visiting such places as seemed most worthy of notice, or fixing and arranging these ill-assorted recollections. I visited a military school, like the others, upon the Lancasterian system, with seven hundred boys ; it is doing well, which is more than can be said for the institution belonging to the city ; indeed, it is a matter of serious regret, that in Russia so little prospers that is not backed by military influence ; where the fault lies it might be difficult to discover on so short an acquaintance. There is a mineralogical cabinet appertaining to the city institution, in which are deposited many magnificent specimens of the Nertchinsk mines.

I visited the prison, which I found in a state that would have commanded the approbation of the humane and philanthropic Howard. It is spacious and well ventilated, and the prisoners are allowed plenty of wholesome provisions. They are only chained when employed out of the prison, either upon public works or in the removal of any nuisance. In connexion with the prison I may also notice a species of public manufactory, or working bazar, for every sort of trade ; the inmates, or workmen, are in general such as have been exiled for

misdemeanours, and are detained for their own and the public benefit ; many of them contrive to earn a considerable fortune, and all are secure of the benefit of full employment. The building is of wood, and belongs to the city, who hire out apartments at fixed prices, retaining also a proportion of the gainings, which are appropriated to charitable purposes ; their capital is already very considerable, and it is one of those public-spirited and well-digested schemes which is worthy of imitation in every civilized state, where there are either criminals to punish, or unfortunates to relieve.

The exchange and public bazars are a fine range of buildings, with a superb saloon in the centre, where public balls and masquerades are held at least as often as once a-fortnight during the long winters, besides numerous private balls.

Of society there is but little, but that little is good, and mostly German. I must, however, except my venerable and respectable countryman, Mr Bentham, as also his homely Cockney wife. Of all the methodical people, preserving their originality of manners, customs, and opinions, this couple are certainly the most extraordinary I have ever seen moving on their own axis or in their own orbit ; they appear to exist between light and darkness, unconscious and careless of what passes around them. Mr Bentham has been forty years in Siberia, in the full enjoyment of the same proverbial reputation that his honesty would have entitled him to had he for ever remained a citizen of London. He has filled a ludicrous variety of situations : horse-dealer to the celebrated Count Orloff ; secretary to the Governor-general Jacobi ; a respectable merchant ; and, lastly, a Siberian *commissary*. A grant of land has been given to

him by the emperor, and the rank of nobility enables him to hold a few peasants, which inhabit his small village in the circle of Irkutsk. As to Mrs Bentham, she has just been long enough (fourteen years) in Siberia to forget her own native language, but not long enough to learn that of her adopted country: with all their nationalities I found them a worthy couple; their only child, a spoiled boy, is in the hands of the *missionaries* at Selinginsk. At a public ball given in honour of the coronation, I counted seventy ladies; yet this was considered as a very small number for Irkutsk, as they sometimes muster on such occasions from two to three hundred. The truth is, with the exception of the ladies I have before named, most of the fair sex belong to the merchants, who may with propriety be termed Jew pedlars, for they deny themselves and their wives almost every comfort, save that of a public and ostentatious dress, from a spirit of opposition and vindictive feeling towards the military, who also, on their side, but too generally treat them in the same ungenerous, if not slighting and contemptuous, manner that we do the Jews in England. A Jew in England, and a merchant in Russia, except in the capitals, or principal seaport cities, stand on the same level; and I may venture to say, that, with very few exceptions, it is not consistent with etiquette, much less with custom, for a person of rank to dine with a merchant, unless he be mayor or farmer-general, or unless on his saint's day, when it certainly is common to honour him with an acceptance.

The merchants, on the other hand, have as strong a feeling against the receiving of the military in private, as the latter can have against recognising them *in public*.

It is a serious evil that the sons and daughters of the merchants have received no better education. Many of them can scarcely read or write; yet they are, in point of opportunity, on a par with those who move in the same sphere in European Russia, owing to the assistance rendered by the Swedes and French, and other exiles, many of whom possess first-rate talents. These expatriated instructors have tended to improve and civilize Siberia, in a ratio surpassing that of central Russia. But many years must elapse before that happy union of society, so conspicuous in England, can be brought about in this part; before the swaddling cloak, and long beard, will be laid aside with the same avidity with which they are now guarded. Yet I do not think it a matter of speculation, nay, I do not think it a difficult task, to instil a spirit of literary emulation into the minds of even the lower orders of the Russian community. With them, more can be done by fair than by foul play; coercive or compulsive measures will do nothing with the Russian, when brought in contact with his national prejudices. Having adverted to the want of a proper understanding between the noble and the merchant—a want which I impute as much to pride on the one, as ignorance on the other part, I would fain propose what appears to me no difficult plan:—Were the colleges and academies more open to the middling class of the community, I feel certain that incalculable advantages would result therefrom. I feel even certain, that the present system of taxing the commercial part of the community might be turned to a great moral advantage; increase of education, consequently of morality, civilization, and harmony among all classes, *would be the direct result of my plan.*

A first-rate merchant in Russia is allowed by law to trade upon a capital of 100,000 roubles, or more ; for this privilege he pays a direct tax of five or ten per cent per annum. Now, supposing each merchant so situated to be possessed of a family of children, and that he were to put them to the college of nobles, and to receive from the crown 500 roubles per annum for each, (in other words, that for each male child put to the college for education, 500 roubles should be deducted from his direct tax as a first-rate merchant,) a sum quite sufficient to maintain them in a respectable manner, I am certain the consequences would be favourable to education, and to good feeling between the high and middling classes of Russia. When a boy had been five or seven years at college, from the age of twelve, and had passed a certain examination, I would have him allowed to trade as a first-rate merchant for half the tax that other merchants paid, whether five or ten per cent ; and when such young man, who had passed such examination, should become the father of a family, and followed up the maxim of putting his children to a public college, they should be allowed to trade free of any tax. This is holding out an incitement to, not compelling education : nor should it stop here ;—when a boy had won two or three of the academic prizes, he ought to be entitled to the rank of nobility, a circumstance which would have great weight in Russia.

Every class of the mercantile community of the Russian empire might be so placed as to induce them to educate their children in a becoming and useful manner ; a want of this education is the only barrier between them and the nobility. Boys when at school, *whether plebeian or patrician, form*

a friendship for one another ; and where is there more sacred friendship ? With them, all little considerations are laid aside for more solid enjoyments. The noble would find his level as a man, while the man would reach to be noble ; nor beard, nor cloak, nor pride, nor compulsive measures, would be resorted to ; on the contrary, the *onus* would rest with the people, than whom none have a greater desire, or a greater capacity, to learn any thing and every thing ; for all classes of Russians, so far from being above being taught, offer every advantage to the more enlightened foreigner, be he Jew, Turk, or Christian.

My stay in Irkutsk was but a week, when, being furnished with a fresh Cossack, and with every assistance I desired to enable me to reach the river Lena, I set out, a little melancholy at parting with such kind friends ; at seven miles I had a last view of the city. The country became very elevated, and the road lay over hill and dale as far as the fifth station. With the exception of some little corn, the land is one uninterrupted pasture. The inhabitants, Russians, are pretty numerous, and their villages, though small, occur at frequent intervals. The post-houses are good and convenient halting places.

Having crossed the river Lena, I soon reached Vercholensk, a large and populous town on its right bank, distant 150 miles from Irkutsk. The road is by a dangerous precipice, which is descended by horses at a prodigious rate ; and on the ascent both driver and traveller must dismount and put their shoulders to the wheel ; yet accidents are of rare occurrence. The opposite bank of the river is highly cultivated and picturesque. The communication by land ceases here, a circumstance at

which I was not a little rejoiced, longing to be again upon my own element. I soon procured a canoe and a couple of hands, who, with the Cossack and myself, paddled down the stream for eighty miles, to the village of Ustillga. The banks of the river are lofty and well wooded, and present some agreeable scenery. Numerous villages with their rye fields are scattered among the valleys, each invariably attended by its own little stream.

Proceeding day and night in my open canoe, I soon reached Kirenga. The weather was cold, the scenery, though ever changing, was always mountainous ; numerous islands were scattered about the river, whose streams ran at about one and a half or two knots per hour ; I generally made 100 to 120 miles during each day's progress, and, wherever I went, fared well from the hospitality of the Russian colonists, as well as from that of my friends at Irkutsk, who had provided me, according to the Russian proverb, with plenty of *bread and salt*. This simple-sounding provision included also some fine partridges, a hare, a large piece of roast beef, and a quantity of meat pies ; not omitting wine and rum. A traveller in Russia, whether native or foreigner, on taking leave of his friends previous to his departure, uniformly finds at his lodgings all the provisions requisite for his journey, with another lodging pointed out at some friend's upon his next route, for as long as he pleases. Indeed, I have no doubt, as the sequel will justify the assertion, that a man may travel through the Russian empire, as long as his conduct is becoming, without wanting any thing—not even horses and money ; excepting only the *civilized* parts between the capitals.

The villages leading to Kirensk are from fifteen

to eighteen miles apart. It has the name of a city, containing near one hundred dwellings, and five hundred inhabitants, with three churches and a monastery ; the situation is pleasant, but not otherwise noticeable. I staid in it only a few hours, to enjoy the hospitality of the town-major, who felt inclined to try the effect of rye brandy upon me. From it I gained about five or six miles towards the first Tongousian village, when the canoe filled, and we were obliged to pursue the journey by land, creeping round the bluffs, which jet out into them.

Over these poor Tongousians the Cossack exercised his authority in such a manner, that I really felt as much pain as if the same chastisement had been inflicted upon me. The spirit of despotism which characterises the Cossacks is infamous ; it is infinitely greater, and infinitely more dreaded by the poor aborigines, than the power of the governor-general ; they seem to have imbibed their power more from habit than from right. At present there is a law against the exercise of this atrocious abuse ; but I doubt very much whether the government, in this distant part of the empire, can carry it into execution. The Cossacks cannot be dispensed with ; they are a necessary evil ; no officer, whatever may be his rank, not even a governor-general, can do any thing without their aid —no horses, provisions, or assistance can be procured, no orders can be given, no punishment can be inflicted, no courier dispatched ; in short, a Cossack is every thing, and therefore in Siberia he is feared. Whatever may be their general character, and I admit that the terms Russian Cossack and Spanish Don are synonymous, I fear upon the *high-roads* it is much sullied, and still more so here,

forests of wood are on each side of the river, consisting of pine, fir, larch, alder, and poplar. From Kirensk all cultivation had ceased, that of vegetables, and they are but scantily raised. Cattle are, however, very plentiful, and of good sort; bread is of the same price as at Irkutsk, about forty pounds for two shillings. This is due to the consideration of government in forcing flour at their expense for the benefit and sustenance of the poor.

From Vittim I was first overtaken by the ice floating down the river, yet not so as to incommode me, and I had enjoyed the luxury of fine autumnal, cold, weather. From Vittim to Djerbin-Jerbat are three hundred miles, which I did in four days. The stages are very long, and to be reduced, being a very heavy pull when against the stream; but indeed there is nothing that these hardy people will not do without complaining. Sometimes the boat was so much en-

11

from their pipe,—not, however, of tobacco greater part at least being birch-wood dust, shavings, mixed with a very scanty portion of tobacco, the latter article being extremely dear. To this luxury can be added, however small, of brandy, they will cheerfully, and even fully, undergo the repetition of the suffering. In one of these villages, I was requested by the inhabitants to proceed by land instead of by water; they agreeing to supply me with horses; of which I complied with their request, as it would save the labour and attendance of one man, at a season of the year when they require all the spare time possible, viz. the winter fishery. Upon my arrival at the next station, nor horses nor a boat could be procured, except at the habitation of a Yakut. Thither we proceeded with a request to be supplied. The old gentleman pertinaciously refused compliance, malgre the presence of a Cossack, who had powers to call out any and every assistance in my behalf; the knez excused his non-compliance with the order, by observing, that it was in behalf of a captain of the navy, of which rank he could not deem me, with only a nankeen coat and long pipe—the emblems of a Russian pedlar. The Cossack was willing and anxious, by the force of his arguments, to have brought the prince to an unconditional compliance, until I determined upon again having recourse to my own independent mode of travelling, at least till I could meet with some more obliging friend to forward me on.

My knapsack again restored to its deserted state. I coasted the river to Jerbat, where there is a village on the left bank of the river, much venerated by the Yakuti. I ascended with great difficulty a *rugged steep* leading to it. The roof certainly

sented a beautiful appearance, being illuminated by what may figuratively be termed chandeliers ; formed, no doubt, by the water, which, making its way through the apertures above, there freezes, and hangs in icicles from the top of the roof. The scene is very brilliant, but the effect is marred by a projecting crag of rock which overhangs the mouth of the cave, and prevents the eye from taking any other than a horizontal view of it. The air emitted from it was the chilliest I had ever felt. At Jerbat is the line which divides the Tongousian villages from those of the Yakuti.

The Tongousians inhabit divers parts of Siberia equally distant and distinct ; from the shores of the Yenissey, Lena, and Amour, to those of the Ochota and Omekon, and the mountains about Idgiga. They are nearly all wanderers, and rarely to be seen in any mechanical or subservient employment. They are classed into Forest and Desert Tongousi. The former occupy themselves in fishing and the chase, having but few rein-deer ; the latter subsist entirely by the breeding of those animals, and wander from pasture to pasture with their flocks, tents, &c. A very few of them have received baptism ; the rest are idolaters. Their language is said to be Mantshur, from whom they all, no doubt, descended, as may be inferred by the peculiarity of their eyes, being elongated and far apart. They are characteristically honest and friendly, robbery being considered by them as unpardonable. I was myself a witness of their hospitality or improvidence, for they seem to have no thought of the future, and therefore readily share what they have killed ; yet it is strange that nothing will induce them to kill a rein-deer for their own consumption, unless the party is rich, till they

have been eight days without food ; the act is then considered justifiable. They bear fatigue, cold, and privations, to an extraordinary degree. They are sensible of, and thankful for, kind treatment, but will permit no one to abuse them. To strike a Tongousian, is, indeed, a great crime, and often leads to fatal consequences, as, in that case, they do not consider their word as sacred, but justifiably to be broken. They are exceedingly irascible, and can be done nothing with but by good words ; and this I had frequent occasions of proving, through, generally, my own fault.

Their persons are small, and rather delicate in appearance ; their features regular, and somewhat pleasing. With these fair traits of character they are filthy to an extreme, eating and drinking any thing, however loathsome ; and the effluvia of their persons is putridity itself. They are considered good soldiers, and are excellent marksmen, either with the bow or rifle. The dress of either sex is nearly the same as that of the other Tartar nations, differing chiefly in their mode of ornamenting it, and consists of trowsers of the rein-deer skin, with the hair inside, and stockings and boots of the same animal ; the latter made from the legs. A waist-coat or jacket also of leather, sometimes lined with white foxes' or with hares' skins, supplies the place of a thick sort of short surtout-coat of double leather without the hair ; and lastly, for the severity of winter, of a single or double frock with hair in and outside, the two leather sides being together. A warm cap and large gloves, with sometimes a guard for the breast, of white fox, called nagrood-nick, viz. breast-cover, and a comforter round the neck, formed of the tails of the squirrel ; such is *their* costume, which is almost wholly furnished

e skins of rein-deer. Foxes' skins serve for d linings, and a wolf's is considered valuable, varmest of all outside garments. They have guard for the forehead, ears, nose, and chin. eds are made of a bear's skin, or of the large er's, with a blanket from the same animal, with the warmest fur, and in shape like a the feet are completely enclosed ; an axe, , wooden spoon, and kettle, constitute their tensils ; the first is a *sine quâ non*, and a tobacco, with a glass of spirits, their highest

Their modes of dress, and general mode g, &c. they have in common, more or less, l other Siberian nations, whether the Tchukt- kagires, Koriaks, Yakuti, or Kamtchatdales. is no other difference amongst them than in broidery of their clothes, or the richness erty of the wearers ; and these I shall take n to notice in treating of a different tribe. ing parted with the Tongousians, for a long was delivered over to the Yakuti. In three reached Olekminsk, the last thirty miles on æck, my Cossack being quite knocked up old and want of exercise. I reached the arly in the evening, and went to the abode commissary, who was absent upon his an- xcursion for the collecting of the yasack or . His house was, however, made my home, ere I passed the following day very agree- is pretty, interesting, and modest daughter en doing the honours of the house. I re- visits from the postmaster, secretary, priests, erchants ; among the latter was a young man, who had been banished for some heavy but, by his subsequent good conduct, had

the atmosphere during the day, and having every appearance of winter ; yet, upon the whole, the season is considered backward, as on the 1st of October. Lena is generally frozen over, and in three weeks more admits of travellers with sledges ; but at the time I was enabled to reach within fifty or sixty miles by water, although with some risk and difficulty. A noble chain of hills extend along the left bank of the river, with bold, precipitous bluffs rising into the stream, and with their dark firs enlivening the otherwise dreary aspect of the present time. The left bank assumed, from Verkhminsk, a low swampy, but rich pasture appearance, the hills taking a new direction. Upon approaching Yakutsk, the villages become less frequent, and the stations all longer, extending even to two, five and forty miles, yet the natives do every thing with cheerfulness. Nothing of any considerable attraction occurred to me, yet I felt as if excited upon the beautiful prospects and river scenery, which cannot fail of creating a most lively interest.

ing through the water, no pleasant circumstance
 12° and 15° of Reaumur's frost. I, how-
 bore them cheerfully, conscious that a warm
 e, and a hearty welcome, were always await-
 y arrival. The same kindness of heart which
 rovided me with a boat to descend the stream,
 ired me also a horse to ride, and, in the even-
 f the 6th of October, I found myself in the
 table and comfortable residence of his excel-
 , the governor of Yakutsk, Captain Minitzky
 a Russian navy, who had passed many years
 English service, and three of them with my-
 a, Captain N. D. Cochrane. In him I found a
 worthy, upright, and liberal friend, and warm-
 ured for my success, to ensure which, every
 I desired was provided for me; although it
 hereafter appear that what I now considered
 most provident dress, having been put on in a
 room, turned out to be indeed a poor fit-out
 ach a journey.

Yakutsk, although a considerable place of trade,
 a great pass for the American Company, is ill
 and more scattered even than Irkutsk, in the
 exposed of all bleak situations, on the left
 of the Lena, which is in summer, four miles,
 winter, two miles and a half wide, appearing,
 really is, one of the finest streams in the world,
 ng a course of more than three thousand miles
 its source, near Irkutsk, to the Frozen Sea,
 a it enters by several mouths. The stream is
 means a rapid one, but rather may be called
 as its name appears to import. There are
 a thousand inhabitants in the city, of whom
 reater part are Russians, and the rest Yakuti.
 a-dozen churches, the remains of an old for-
 a monastery, and some tolerable buildings;

give it some decency of appearance ; yet I could not help thinking it one of the most dreary looking places I had seen, though I was in the enjoyment of every comfort, and therefore the less disposed to complain.

Yakutsk is not an independent government, but belongs to that of Irkutsk. It has, however, a vice-governor, and an independent chancery of its own, who regulate all its affairs, making a mere formal report. It contains, scattered over a wonderful extent of territory, about one hundred and eighty-five thousand inhabitants, composed of Russians, Yakuti, a few Tongousi, and fewer Yukagires. Fifty thousand of the whole pay tribute, which is in furs, mostly sables. Those of Vittim and Olekma are considered the finest, blackest, and smallest to be met with, a pair reaching as high as three and four hundred roubles, or from fifteen to twenty pounds sterling. Each taxable individual pays one quarter of a sable, or, in general cases, each family one sable, which, if it cannot be procured, is compromised by the payment of thirty shillings, reducing the tribute per head to seven shillings and sixpence, as that of a Russian is ten shillings. Thus the Russian pays nominally more, but actually less, than the aborigines ; the former pay *padoushnie*, the latter yasack—the former always money, the latter furs. The greatest part of the population subjected to the government of Yakutsk live on the banks of the Lena, and small streams running into it. No less than twenty thousand families certainly reside on them. The clear revenue derived is half a million of roubles, or twenty-five thousand pounds. The trade carried on by its numerous pedlars is very considerable, from the immense quantity of the skins of all sorts.

tea, sugar, spirits, nankeens, cottons, ves, and the like, constitute the cargoes rs; for which they receive the skins of es, sables, river otters, martins, foxes, rrels, and ermines, at very unfair prices. s, however, the value of them is well ear skins, twenty and twenty-five shillings, from thirty to one hundred and fifty sea otter, from ten to thirty pounds; thirty and forty shillings; a black fox, twenty and even thirty pounds; red x, two and three pounds; fiery red, ings; the white or arctic fox, five or six and the blue fox, eight or ten shillings; and ermines, sixpence to one shilling; shillings to a guinea, while I have my-even guineas for a black wolf at Omsk; which come from the coast of America ve or six shillings. These are the prices, but they are purchased of the natives rs for goods enhanced one hundred and it, and for one-half the price for which Yakutsk; returning, in most cases, a of two and three hundred per cent, be-æ traders live upon the poor aborigines raffic.

ed in Yakutsk three weeks, making the parations for my journey during so se-m of the year. In particular, I looked re of my dress, for the accounts of the I should have to encounter were such, dered myself exposed to death, with-e satisfaction of expecting to be buried, ernal frost that prevails here. Could, is feeling be gratified, the satisfaction aterially increased, by the knowledge.

that the body itself would enter the next world in the same state that it left this ; for every where to the north of Yakutsk, the earth, two feet and a half below the surface, is perpetually frozen, consequently a carcase buried in it at that depth must remain perpetually the same.

I determined, however, to start the day that the Lena should become passable on the ice. In the meantime, I was engaged in such society as Yakutsk could boast ; but if I could say little in this respect in favour of Irkutsk, I should almost be silent regarding Yakutsk, where, except the chief's wife, and those of one or two of the merchants, there is no society, and indeed scarcely any one of those can be spoken to by a traveller, especially by one whose long beard and haggard looks might well frighten them from me ; they were, however, safe on another account, namely, my extreme ignorance of the Russian language.

The way I passed my time at Mr Minitsky's was sufficiently regular : I rose early, and always went early to bed ; occupied, while daylight lasted, with bringing up my journal ; then at a game at billiards ; afterwards at dinner, always on the most excellent fare, with wine, rum, and other delicacies. In the evening, with a party of the natives, male and female, at the house of the chief ; the ladies, to all appearance, dumb, not daring to utter a word, and solely employed in cracking their nuts,—a very small species of the cedar nut, which abounds in such quantities as to be made an article of trade to Okotsk and Kamtchatka. I am not exaggerating, when I say that half-a-dozen of females will sit down and consume each many hundreds of these nuts, and quit the house without having *spoken a word*—unless a stolen one, in fear it should

be heard.- Should tea and cakes be offered, they will sip two, three, or four cups, as long as the samavar (a sort of copper tea-urn) has water in it. The manner of their using sugar-candy with tea, though perhaps not entirely singular, for the Chinese have the same fashion, is remarkably ridiculous ; each individual takes a small lump, which he grates between his teeth in such a manner as only to consume a very small part of it ; and thus, although the person has drunk three or more cups, the greater portion of sugar remains, and, being placed upon the inverted cup, finds its way back to the sugar-dish when the party has broke up ; so that, probably, at the feast on the following day, a lady or gentleman may happen to get his old friend back again. Nor is it with sugar-candy alone that this system of economy is adopted. Biscuits, cakes, &c. on being presented, are received and placed behind them, on the chair, to keep warm, and their fragments also are ultimately restored to the basket. Thus luxuries of these kinds are rendered cheap, for the custom is general, and I have often witnessed the fact, not indeed at Mr Minitsky's, but at other respectable houses, the inmates of which knew no better, and were ignorant of the chief's disliking it.

While the ladies are thus cracking their nuts, staring, and listening, and speechless, the gentlemen are employed in drinking rum or rye-brandy punch, as their tastes may dictate. Nor is even good rum a scarce article here, coming as it does by way of Kamtchatka. I was one feast-day on a visit to a respectable old gentleman, one of the council ; there were no chairs, but a long table was spread, with fish pies, a piece of roast beef, boiled deer's tongues, and some wild berries in a tart.

The first thing presented is a glass of brandy, which I refused, knowing the chief to have sent some good wine ; this I was offered, and accepted, when I was told by my friend the chief, that it was not the custom to accept any thing of that kind the first time, but to await the third. Relying upon the chief's better knowledge of the Siberian world, I refused the next glass of wine, which was offered me twice, and I need not say I ultimately lost it, probably from the practice of economising good wine in a place where it can seldom be procured.

Great parade is kept up in this part of the world with respect to rank, and no lady visits the wife of the chief or vice-governor without kissing her hand; while the latter sits motionless upon the sofa, without making the least acknowledgment of such a condescension. The same custom was also established at Irkutsk with Governor Treskin's wife, who, being the mother of Mrs. Minitsky, of course initiated her daughter into the mysteries of her importance : she probably finds a sad falling off when at St Petersburg. This absurd custom is carried so far, that the priests are compelled to offer thanks and prayers for them, individually, every Sunday at church. Mr Minitsky is, however, a good man, and an exceedingly clever governor, equalled by few in Siberia ; his situation is, of course, a good one, and could have been made equal to his utmost desires by fraud, trade, extortion, and corruption, had he felt so inclined. But, latterly, the conduct of the governor-general Spersanski has put all the people in office, in Siberia, upon the *qui vive*.

That bribery is still carried on to great excess there can be no doubt, nor is it possible for any *man or men* to prevent it ; it is the practice, and

here an appearance of right or law. It is
 tom of Siberia, that the chiefs are allowed
 ive presents on their names', or their saints',
 As an instance of this, a new governor of a
 e, who could not reach in time to be pre-
 the feast of the commissary, was willing to
 good beginning. He accordingly sent an
 to the commissary regretting the absence,
 same time forwarding to him a pair of ele-
 mounted pistols, and reminding him that
 vernor's name-day would take place that
 at which his attendance, &c. The old mi-
 ommissary, who had hitherto resisted the
 of paying such compliments, could not re-
 h a challenge, and attended the feast at the
 ten thousand roubles. Here is an instance
 vernor openly offering a bribe, as well as of
 demanding one. They are but the repre-
 res of much worse, as I shall hereafter have
 ortunity of observing.

dressess completed, and the river having, ac-
 ; to custom, been passed and declared closed,
 ed up my knapsack and other baggage, and
 rovided also with a couple of bags of black
 through the kindness of my host, with a
 of roast beef, a few dried fish, half-a-dozen
 of tea, and twenty pounds of sugar-candy,
 fifty pounds of tobacco, and a keg of vod-
 orr-brandy), a most indispensable article on
 journey, whether for my own or others'
 option. I had besides a pipe, flint, steel, and
 d, what was of most importance, a Cossack
 ion, who indeed proved invaluable to me.
 estination was Nishney Kolymsk, distant
 one thousand eight hundred miles, which
 o be travelled over in the coldest season of

the year, and in what is esteemed the coldest part of the north-east of Asia. All this I heeded nothing, and provided, *as I thought*, with warm clothing, considered myself as proof against at least 50° of Reaumur's frost. The spirit thermometer at Yakutsk, measured at Mr Minitsky's house, was 27° of cold of Reaumur, or nearly the same number of degrees below the zero of Fahrenheit, yet I walked about the streets of Yakutsk with only my nankeen surtout, trowsers of the same material, shoes, and worsted stockings; a flannel waistcoat which had lost its principal virtue, was the only warm clothing; yet I can truly say I was not at all incommoded. This fact, which can be testified by Governor Minitsky, now in St Petersburg, alike surprised him as well as every other person; nor was my conduct upon my return the less careless of the effects to be apprehended from exposure to such very severe weather. At Irkutsk, in the month of January, with 40° of Reaumur, I have gone about, late and early, either for exercise or amusement, to balls or dinners, yet did I never use any other kind of clothing than I do now in the streets of London. Thus my readers must not suppose my situation to have been so desperate. It is true the natives felt surprised, and pitied my apparently forlorn and hopeless situation, not seeming to consider that when the mind and body are in constant motion, the elements can have little effect upon the person. I feel confident that most of the miseries of human life are brought on by want of a solid education—of firm reliance on a bountiful and ever-attendant Providence—of a spirit of perseverance—of patience under fatigue and privations, and a resolute determination to hold to *the point of duty*, never to shrink while life retains

spark, or while "a shot is in the locker," as sailors say. Often indeed have I felt myself in difficult and trying circumstances, from cold, or hunger, or fatigue; although, thank God, not to the degree which my unfortunate brother officer Captain Franklin experienced, yet still to a degree beyond what would, in England, be considered sufficient to cure me of my wandering propensities; and I may affirm, with gratitude, that I have never been so happy as in the encountering of these difficulties. Thus, in the present case, I had no good parka, or frock; no knee-preservers, blanket, or bed; an indifferent pair of gloves, and a bad cap; no guard for my chin, ears, or nose; in short, I was not properly provided, which I found out too late, and attribute the preservation of my health solely to the strength of my constitution, which have never seen equalled to this hour.

It was on the last day of October that I departed from Yakutsk with my Cossack, the thermometer being at 27° of frost. I had, through the kindness of my friend, Mr Minitsky, been provided with a couple of sledges, and every recommendation within his power. It is impossible for me to describe the different emotions which agitated my heart as I quitted the last limit of civilization, of the friends I had made, and of all that could attach me to society; for although I felt a confidence of meeting with hospitality and every assistance I could desire, still, to a sensible mind, the enterprise was formidable, going as I did alone, and ignorant even of the Russian language, much more that of the Tartar tribes. For the means of meeting the latter difficulty, I was indebted to the numerous people who spoke English, French, and German, some of whom I met at almost every halting-place,

when the dulness of a Cossack interpreter could hardly afford me the means of amusement, much less of information.

The cold I suffered in the sledge, and the jolting movement attending the passage of the ice on the Lena, now crumbled by the stream into hillocks, soon roused me, and I jumped out, preferring to walk ; and though I had my feet almost frozen while in the sledge, the exercise, and weight of my clothes, soon brought me to a state of perspiration by the time I had reached fifteen miles, when I halted for the night in a pleasant yourte.

The next, a cold and windy day, I resumed my journey, alternately walking and riding on horseback, to escape at once from fatigue and cold, and measured forty miles over a level but well wooded country. I felt much pleased with the attentions of the Yakuti, who provided me, as I arrived, with milk, meat, and not seldom with clotted cream, at times also with wild raspberries, called here *maliena*, immersed in it. Such were my delicacies until I reached the banks of the river Aldan, a noble stream running into the Lena. I had passed a small place called Miera, where are two churches, for the performance of divine worship in the Yakut dialect, at which, although I understood nothing of it, I attended. A more dreary looking place I have never seen. It overhangs the banks of a considerable lake. The situation in summer may be better ; but what can be otherwise than dreary in Siberia during the winter ? The latter part of the journey to Aldan was through romantic valleys, whose numerous streams and lakes supply a great abundance of fish. They are also studded with numerous traps, of various descriptions, for foxes, *bears*, *sables*, and wolves ; and the quantity of ani-

imals of the chase is equal to the demand. There appeared a considerable population, and many wealthy knezes or princes, who, wherever I met them, were kind and hospitable. I reached Aldan the fourth day, the distance being about one hundred and fifty miles ; the last day's journey sixty. My face was suffering greatly from the effects of a cold wind.

At Aldan I staid two days, while horses were procuring for the post which I was accompanying ; but finding them still tardy, I made the prince understand, that unless I had them next morning, we must return to Yakutsk ; and the better to persuade him of my intention, I availed myself of a letter in English to Mr Minitsky, the contents of which really were to thank him for his kindness and hospitality to me, but which I represented as a letter of complaint against the Yakut prince. The latter took it, though apparently in the greatest apprehension of its consequences, and actually delivered it himself, at Yakutsk, by way of atonement. Mr Minitsky repeated the circumstance upon my return. Poor fellow ! however I might turn the matter for my own benefit, little intention had I of making a complaint, where indeed there was no fault. My letter, however, had the effect of procuring horses on the third day, and we departed in high glee, as the same beasts were to carry us to Baralass, distant one hundred and fifty miles, which will be the less wonder, when it is observed, that the horses go loaded with two hundred weight from Yakutsk to Kolyma, and back again, through roads and over a country deemed almost impassable. So tremendous a journey is it considered, and so difficult of accomplishment by one and the same horse, that the charge for each

animal to go to the Kolyma, is more than equivalent to the value of the horse at Yakutsk. Government pay by contract for each load to the Kolyma, ninety, while the merchants pay one hundred and twenty, roubles; for the return, government pay forty-five, and the merchants sixty, roubles. Upon the outward journey the horse carries from two hundred and forty to three hundred; while upon the return, not more than one hundred and fifty pounds weight. The common value of a horse at Yakutsk, *for this work*, is from seventy-five to ninety roubles; but there are horses whose owners have refused from six to ten thousand roubles;—a prodigious sum in this part of the world. I believe there are not many instances of a horse having taken two loads, and returned again to Yakutsk from the Kolyma, and no instance of three loads. This is no depreciation of the value of the Yakuti's horses, which are of a very fine though small breed; I consider their powers as inferior to none of their own size, and might adduce, as instances of it, that a Yakut will, for a considerable wager, ride his horse from two hundred to two hundred and fifty versts in twenty-four hours. I think in a late instance three hundred versts, equal to one hundred and seventy miles, have been performed by one horse within twenty-four hours, not by any violent exertion, but by regular trotting, which would astonish the sporters of Old England. Nor is a Yakut behind-hand with such sporter in betting; I never saw a people with more spirit of gambling than these, who are otherwise ignorant. The very contracts which the Yakuti make with the government to forward on their stores or provisions, are often lost at a game of cards; that is, *the money to be paid for such contract is put in*

opposition to the execution of it—a most serious difference.

On the 6th of November I crossed the Aldan, and breakfasted at a solitary yourte (at ten miles), completing in the evening thirty miles, where we halted in a cabin about ten feet square. Had it, however, been much worse or smaller, I must have felt thankful, for I had been severely pinched by the effects of the cold and the wind in my face. A good fire, a cup of tea, and a sound slumber, with pleasant dreams, perfectly refreshed me by the ensuing morning. The country had of late been level, but at twenty miles I became enveloped in a lofty chain of mountains, which I had been for some time gradually ascending, and which are called the Toukoulan chain, from the word Touku, which, in the Yakut language, signifies “noisy;” as indeed the river of that name does roar down its precipitous banks. In the same chain also the Yana has its source. We halted for the night at the foot of a mountainous peak, sheltered from the cold north wind; and as this was the first night which I was to pass in the open air, I shall describe the manner of it, in order that it may be known how far (contrary to my calculations) our situation was susceptible even of comfort.

The first thing on my arrival was to unload the horses, loosen their saddles or pads, take the bridle out of their mouths, and tie them to a tree in such a manner that they could not eat. The Yakuti then with their axes proceeded to fell timber, while I and the Cossack, with our lopatkas, or wooden spades, cleared away the snow, which was generally a couple of feet deep. We then spread branches of the pine tree, to fortify us from the damp or cold earth beneath us; a good fire was now soon made,

and each bringing a leathern bag from the baggage, furnished himself with a seat. We then put the kettle on the fire, and soon forgot the sufferings of the day. At times the weather was so cold, that we were almost obliged to creep into the fire; and as I was much worse off than the rest of the party for warm clothing, I had recourse to every stratagem I could devise to keep my blood in circulation. It was barely possible to keep one side of the body from freezing, while the other might be said to be roasting. Upon the whole, I passed the night tolerably well, although I was obliged to get up five or six times to take a walk, or run for the benefit of my feet. While thus employed, I discovered that the Yakuti had drawn the fire from our side to theirs, a trick which I determined to counteract the following night. I should here observe, that it is the custom of the Yakuti to get to leeward of the fire, and then, undressing themselves, put the whole of their clothes as a shelter for the outer side of their bodies, while the inner side receives a thorough roasting from exposure to the fire; this plan also gives them the benefit of the warmth of their own bodies. The thermometer during the day had ranged from 20° to 25° , according to the elevation of the sun.

The following day, at thirty miles, we again halted in the snow, when I made a horse-shoe fire, which I found had the effect I desired, of keeping every part of me alike warm, and I actually slept well without any other covering than my clothes thrown over me, whereas before I had only the consolation of knowing that if I was in a freezing state with one half of my body, the other was meanwhile roasting to make amends. On the *third night* I reached the foot of the mountainous

pass which may be said to lead to Northern Siberia. My route had hitherto lain generally on the banks of the Toukoulan, which runs along a picturesque valley on the western range of the mountains, and is well wooded with fir, larch, and alder. Upon reaching thus far, I looked up at what I had yet to perform, and, I confess, felt astonished, not at the height, but how it could be practicable to get up a slippery and almost trackless road. However we commenced, and mainly by preferring the deep snow, as I uniformly did, at last gained the summit, but not without great fatigue ; a horse could not carry a person up under a considerable time, and it took me two hours at least. We sat down, my Cossack and I, to gain breath and wait for the Yakuti with the baggage, in the mean time smoking a pipe ; but it was too cold to remain ; we therefore prepared to descend. As to keeping my feet, however, that was impossible ; I therefore lay down, and slid to the bottom of the most dangerous part, a feat for which I had nearly paid dear, by coming in contact with a horse which had taken the same expeditious mode of descending. The path was so narrow, that one error would have pitched me for ever into the abyss of snow beneath ; and, although not deep, would have prevented a return, unless I had fortunately fallen with my feet downwards ; the half-frozen surface of the snow serving in some manner to bring the person up ; falling on one side I found very dangerous, unless somebody was near to render assistance. I soon reached what I may term a charity yourte, being erected by the community in general for the accommodation and preservation of travellers. It consists of a twelve feet square room, with a small anteroom which serves as an

entry, and may be properly termed a log-house, having no window, unless a large opening in the roof may be so termed. The centre is left to form a neat hearth or fire-place, on the same level as the sleeping places round it, which are six in number, and about eighteen inches off the ground, leaving a narrow passage between the hearth and bed places, which are formed of earth, boarded up and planked over; they were indeed very comfortable cells. Outside, the building is supported and banked up with snow, and the roof is covered with the same article, no fear being entertained of its ever melting during the travelling season; the only inconvenience is from the smoke not having a free outlet, unless the door is open, which makes it very cold, and otherwise unpleasant.

We passed a tolerable night, in company with some other travellers bound to Yakutsk, and next morning resumed our journey in fine weather; and in this way, at the expiration of six days, we reached Baralass, alternately sleeping in snow or in an uninhabited yourte, as our progress made it necessary.

These charity yourtes are placed at an inconvenient distance, being twenty-five miles asunder, too great in bad weather, and too little in fine; twelve miles would be preferable, as travellers would then always have a comfortable resting-place at one or the other, at least where wood is to be had. The country over which I had come may be deemed on the whole very picturesque, the road lying between two elevated ranges of mountains; the valleys exceedingly well wooded, gradually diminishing as the summit is approached, where nothing but the purest frozen snow is to be seen. There are also innumerable valleys,

emanating from the principal one, which produce a beautiful effect, besides furnishing fine timber ; but with all its beauty or grandeur of scenery, it is dreary and desolate, not an individual dwelling in the whole extent from Aldan to Baralass, a distance equal to half the length of England.

I was civilly and hospitably received by a Yakut prince, who gave me a supply of frozen milk, and we resumed our journey to Tabalak ; we made forty miles the first day, by a good road, the snow being hard frozen. The little river Sartan runs along the valley, and unites with the Yana. I met a few hunting Yakuti, armed with bows and arrows, some on horseback, and others on foot. They appear an extremely civil people. The following day, with great labour, walking and riding alternately, we reached forty miles ; the horses distressed, and the guides no better ; the weather, snow and wind. For myself, I was much disheartened, but I felt that I had no choice ; go I must, for return I would not had things been ten times worse. The third was the coldest day I had experienced, the thermometer at twenty-eight and thirty degrees below the freezing point of Reaumur, attended with some snow. We passed several habitations of the Yakuti, who invariably offered us a lodging and provision for the day ; and always appropriated to me the best berth, which is in that corner of the room under the image, and opposite to the fire. We now left the river and valley of Sartan, crossed a considerable range of hills to the eastward, and entered upon an open country, where we got over more easily, the path being very fair. Passing the banks of the Boroulak, we came in time to witness the result of one of their field-sports, in the death of a deer, which

had been levelled by a rifle-shot ; of course I had the most luxurious part presented to me, being the marrow of the fore-legs. I did not find it disagreeable, though eaten raw and warm from life ; in a frozen state I should consider it a great delicacy. The animal was the size of a good calf, weighing about 200 lbs. ; such a quantity of meat may serve four or five good Yakuti for a single meal, with whom it is ever famine or feast, gluttony or starvation.

We reached Tabalak on the sixth day from Baralass, the latter part of the road lying on the Boroulak, varying from excellent to execrable, as we changed from the river to the banks ; the distance is two hundred and thirty miles. It is not badly peopled, considering the access to it, as compared with the former part of my journey. Here we overtook an expedition bound to the river Kolyma, for the purpose of discovery, under the charge of the steersman. It consisted of one hundred and fifty loaded horses, apparently in a sad state from being too heavily laden. Independent of the expedition, there were on the road a great many pedlars bound to the same place, to be ready for the fair of the Tchuktchi. What will not avarice or ambition prompt man to ? But I am not the person to be astonished, who am voluntarily travelling the same road, without necessity or occasion. The journey is at present rendered increasingly laborious by numerous trees which have fallen ; whether from the effects of wind, the force of the waters, or natural decay. It is no uncommon thing, during the spring, for the trees which have been left by the winter's blasts or summer's deluge, to salute the traveller in passing, at least if he should *happen to step upon the roots, which are almost*

the surface of the earth ; so perfectly
the whole country north of 60° of lati-

lak I had a pretty good specimen of the
a child, whose age (as I understood
eersman, who spoke some English and
) did not exceed five years. I had ob-
child crawling on the floor, and scrap-
its thumb the tallow-grease which fell

pounds of meat in a day. The effect
rvable upon them, for, from thin and
sing men, they will become perfectly
Their stomachs must be differently

formed from ours, or it would be impossible for them to drink off at a draught, as they really do, their tea and soup scalding hot, (so hot, at least, that an European would have difficulty in even sipping at it,) without the least inconvenience. I have seen three of these gluttons consume a rein-deer at one meal; nor are they nice as to the choice of parts; nothing being lost, not even the contents of the bowels, which, with the aid of fat and blood, are converted into black puddings.

For an instance, in confirmation of this, no doubt, extraordinary statement, I shall refer to the voyages of the Russian admiral, Saritcheff. "No sooner," he says, "had they stopped to rest or spend the night, than they had their kettle on the fire, which they never left until they pursued their journey, spending the intervals for rest in eating, and, in consequence of no sleep, were drowsy all the next day." The admiral also says, "That such extraordinary voracity was never attended with any ill effects, although they made a practice of devouring, at one meal, what would have killed any other person. The labourers," the admiral says, "had an allowance of four poods, or one hundred and forty-four English pounds, of fat, and seventy-two pounds of rye flour, yet in a fortnight they complained of having nothing to eat. Not crediting the fact, the Yakuti said that one of them was accustomed to consume at home, in the space of a day, or twenty-four hours, the hind quarter of a large ox, twenty pounds of fat, and a proportionate quantity of melted butter for his drink. The appearance of the man not justifying the assertion, the admiral had a mind to try his gormandizing powers, and for that purpose he had a thick porridge of rice boiled down with three pounds of butter, weighing

together twenty-eight pounds, and although theutton had *already breakfasted*, yet did he sit down to it with the greatest eagerness, and consumed the whole without stirring from the spot; and, except that his stomach betrayed more than ordinary fullness, he showed no sign of inconvenience or injury, but would have been ready to renew hisuttony the following day." So much for the admiral, on the truth of whose account I place perfect reliance.

Tabalak is the residence of a corporal of the Cossacks, who has the charge of the post, and commands over the surrounding Yakuti. He is married, and appears to live here with tolerable comfort. The country round is studded with lakes, producing abundance of fine fish. I staid a couple of days to refresh myself, and, on the 22d of November, I resumed my journey. The weather was now very cold, and my knees became exceedingly painful, from sitting, as I thought, too much on horseback; consequently I walked more, in spite of the fatigue, going over fifteen and twenty miles a day on foot, and always in those places where it was difficult for the horse to carry me. The first night we halted on the banks of a small lake, where some fishermen were hauling their nets, although the ice was twenty inches deep; of course I became entitled to a proportion of the fish caught,—to insure which, I invariably partook of the fatigue. Let who will make his appearance, of whatever tribe or religion in Siberia, he will certainly be entitled to food if he partakes in the labour of catching it—I do not know a more humane custom. The plan is indeed ingenious, and proves that "necessity is the mother of invention." Having fixed upon the spot, a large hole is made in the most

distant part opposite to the place to which the fish are to be hauled, and then holes are also made from it on each side circularly towards the point where the fish are to be caught : the distance from hole to hole about fifteen or twenty feet ; the whole of the net is then let down the first opening, as are the ropes attached to the hauling of it ; which ropes are fastened to a long pole, which, under the ice, conducts the ropes from hole to hole. Both ends are taken up at the last and largest opening, and the net is thus hauled, and a considerable quantity of fish are caught. The following figure will represent the plan, the size and distance of the apertures being proportioned to the size of the net and length of the ropes :—

A, representing the opening where the net is first sunk ; B, where it is hauled down ; the other openings, those made for communication ; and the space within the other circle, the lake.

We halted at a most magnificent range of mountains, running from east to west-north-west, with lofty projecting bluffs and terrific precipices, on lands gently rising from the thickly wooded basis into elevated peaks and long extents of table lands, in all the wild variety of nature. I regretted my *inability* to sketch this beautiful view.

The route lay along the river Tostak twenty-five miles ; then crossing the mountains into the valley, and on to the river Dogdoa, now deeply hid in snow, and occasioning great labour to man and horse. We were frequently obliged to halt and clear away the snow with our spades, to enable the animals to proceed, at other times to unload them, and drag the baggage for two or three hundred yards. In these cases all distinctions of rank are laid aside, every person assisting and taking charge of his own horse ; the only difference, a very slight one, being in favour of the hindmost, and even that was regulated, as the horses must take their turn to lead, though the riders did not. When free from this heavy work, we were almost as badly off, being then on the river, the state of which absolutely prevented the progress of the horses, without first chopping up the ice with hatchets, and then carefully leading the animals. In short, such was the nature of our road, that we had almost to carry the horses through the snow, and support them over ice so clear and slippery, that oil poured over it could not have made it worse. With all the assistance we could give, and even with that which we rendered them in tying cloths under their feet, as well as a rope above their fetlocks, of sufficient length only to enable them to make short steps forward, and preventing their sliding sideways, it was found impossible to save them dreadful falls and heavy strains ; they constantly fell groaning under their loads, and it was really painful even to witness their sufferings. Three days passed in this manner, and I felt that if ever I had earned my coarse fare, it was during that period. Two horses had been allotted to me, and my plan was, to conduct one of them *over the worst part*, tie him to a tree, and

then return for the other—and so on. The Yakuti felt grateful for the willingness with which I took my share of the labour.

The next part of our road lay along the little rivers Kabbregah, Koudouronkui, Rasoka, and Kamen-da-Maslo; after which, leaving the mountainous part, we got upon an extensive plain, and reached a charity yourte very late, having been obliged to abandon one of the horses. I was now suffering much in my feet, on which the frozen perspiration had formed blisters, in which state I had also to encounter water even upon the ice. This, as it appears to me, is occasioned by the intenseness of the frost contracting the ice, till, in the end, it divides about the centre; cold being of so peculiar a quality, as in the first place to expand, and ultimately to contract, all fluids it affects. The same observation applies to the ground, which cracks alike, whether from the effect of heat or cold; indeed, so powerful is the congelation of water, that it even splits mountains asunder—a fact which is here every where visible. Many of these mountains are of slate, and the rest appear but a common sort of rock and granite; but on the banks of the river Kamen-da-Maslo, there is produced a fossil or an earthy substance, called in Russian Kamen-noye Maslo, or stone butter, which is eaten in various ways, as well by the Russians as Tongousi—it is of a yellowish cream-colour, and not unpleasant in taste; but it is forbidden, as pernicious in its effects, producing various disorders, as the gravel, &c.

This earthy matter is found to be a fossil or salt, oozing out of rocks in many parts of Siberia, but chiefly from those near the river Irtysh and Yenisei. When it is exposed to the air in dry weather,

it hardens, but in wet weather it again becomes soft or liquid.

The horses requiring much rest from their fatigues, we did not depart until late. The intermediate time I consumed in various employments, chiefly by contrasting in my mind the populous cities and towns I had left, with the remote and widely distant villages I now meet, and "those vast and uncultivated tracts," as are observed by Talleyrand, when speaking upon society, "traversed rather than peopled by men who belong to no nation. It is a novel spectacle for a traveller who, taking his departure from a large town where society is perfected, watches every degree of civilization and industry becoming every moment weaker, till he arrives in a few days at the clumsy and coarse hut, constructed with the trunks of fallen trees. Such a journey is a practical analysis of the origin and progress of nations, where we have a complicated aggregate to arrive at the most simple elements: every day we lose sight of some one of those inventions which our unceasing wants have rendered necessary, and seem to travel backward in the history of the progress of the human mind. If such a spectacle invites the imagination, if we are delighted to find in space what alone belongs to time, we must be content to see very few social ties among those men who appear so little to belong to the same association, so little to possess an unanimity of character." These ideas, so congenial to my own, occupied me in a melancholy mood, and I rose, and, looking at the grandeur of the scenery, reflected, that wherever I was, the same Province was there also.

The extensive chains of mountains viewed from the spot where I write this are truly fine; they run

from east-north-east to west-south-west ; the river Rasoka runs along the eastern range, and is visible for many miles within the two ranges, which appear to have been torn asunder by some convulsion of nature. I was, however, obliged to quit the scene, and pursue my journey over a country agreeably diversified with hill and dale,—the path lying first along the banks of the Biekhall and then of the Bludenaya, where I halted in a most beautiful and close valley, surrounded on all sides by lofty and well-clothed mountains.

On the ninth day I started for Zashiversk, distant forty miles, the first twenty of which was by a rising path, until I reached the greatest elevation of a lofty mountain, with some peril and more difficulty. The scene reminded me of my journey across the sandy hills at the back of Vera Cruz, with this difference only, that the gale, generally attending both, obscures in the one instance the atmosphere with sand, and in the other with snow ; in both no traces of a path can long exist if there be any wind. The snow lay from four to six feet deep, and our situation was at one time extremely dangerous, being completely ignorant which way to turn ; not the smallest vestige of verdure was to be seen, and except a few crosses (another resemblance to Vera Cruz), which were sure to receive the offering of the Yakuti, consisting of horse-hair drawn from the tail or mane of horses, in token of their gratitude for safe arrival at the summit, nothing was visible. By good fortune and perseverance, we at length got quit of this desert of snow, and rapidly descended the north-east side of the hills, enjoying the magnificent winter scene which gradually opens to view. I soon reached the banks of the *Chouboukalah*, and the more considerable *Galanima*, and

then, along a well-wooded valley, gained the rapid Indigirka, just at the point where the latter falls into it ; not long after which I entered the town of Zashiversk.

Of all the places I have ever seen, bearing the name of a city or town, this is the most dreary and desolate ; my blood froze within me as I beheld and approached the place. All that I have seen in passing rocky or snowy sierras or passes in Spain, in traversing the wastes of Canada, or in crossing the Cordilleras or Andes of North America, the Pyrenees or the Alps, cannot be compared with the desolation of the scene around me ! The first considerable halting-place from Yakutsk, the half-way house, is nine hundred or one thousand miles removed from a civilized place. Such a spot gives name to a commissariat, and contains seven habitations of the most miserable kind, inhabited severally by two clergymen, each separate, a non-commissioned officer, and a second in command ; a postmaster, a merchant, and an old widow. I have, during my service in the navy, and during a period when seamen were scarce, seen a merchant ship with sixteen guns, and only fifteen men, but I never before saw a town with only seven inhabitants.

The distance to Zashiversk from Tabalak is two hundred and fifty miles, throughout the whole of which there is not a single inhabited dwelling, and but eight charity yourtes. The weather had, generally speaking, been calm and mild, seldom exceeding 25° of frost of Reaumur. This miserable town is, however, at least an hospitable place. It is seated on the right bank of the Indigirka, which flows with great rapidity, and, during the summer, carries every thing before it. The mountains to the west are bold and bare, producing no-

thing besides a few dwarf pines ; these mountains confine the river for forty miles farther to the north, where it spreads, and forms a continuation of lakes until it enters the Icy Sea.

Fish is fine and most abundant, and constitutes almost the only support of the *numerous* inhabitants. There is not a blade of grass near the place, and no horses are kept nearer than thirty miles ; so that there is no little difficulty in bringing the hay which maintains a couple of cows. The planner or proposer of this site for a town might deserve punishment, but certainly less than that of being made its perpetual commander. I, however, remained three days, living in a state of luxury to which I had, of late, been a stranger. Hares, wolves, bears, wild rein-deer, and elks, which abound here, were my ordinary food ; foxes, which are also in great plenty, are also sometimes used. Bear and wolf meat I found good when very hungry ; rein-deer I found a delicate diet ; but elk, I think, surpasses every thing I have tasted, having all the nutriment of beef, with all the delicate flavour of the rein-deer.

On the 3d of December I quitted the *town* of Zashiversk, not ungrateful for the hospitality of its poor inhabitants, who had supplied me with plenty of fish, here eaten in a raw state, and which to this hour I remember-as the greatest delicacy I have ever tasted. Spite of our prejudices, there is nothing to be compared to the melting of raw fish in the mouth ; oysters, clotted cream, or the finest jelly in the world is nothing to it ; nor is it only a small quantity that may be eaten of this precious commodity. I myself have finished a whole fish, which, in its frozen state, might have weighed two or three pounds, and, with black biscuit, and a

of rye-brandy, have defied either nature or prepare a better meal. It is cut up or d into slices with a sharp knife, from head to and thence derives the name of stroganina; nplete the luxury only salt and pepper were ng. Having charged myself with a leather f these, which are always of a white colour, enerally of the sturgeon kind, I resumed my along the crystal surface of the Indigirka. rst day's journey brought me more acquaint- th the power and use of dogs, although I have hem in London drawing a poor sailor who st both his legs; here, however, water or ice, re-wood, travellers and their goods, and every that convenience can demand, are drawn by domestic animals.

forty miles the mountains diverge from the e of the river to the east-north-east and outh-west, the former chain going towards olyma, and the latter embanking the Yana; ountry between them a vast desert. The ieth day we had passed thirty miles, still on allow, transparent, and slippery Indigirka, gave us another lesson of our hard work. islands lay in the river, which, during the er, present a scene of desolation almost in- le, from the effects of the wonderful over- g of the rivers. In journeying along the my horse twice fell under me upon his broad- yet without injury to me, as I used no stir- my feet hanging at liberty for the purpose of g the horse's sides to keep them warm. My lying north, the mountains gradually disap- l as I entered on the seemingly boundless

We tarried at a comfortable clean yourte, I was *regaled with excellent cream and wild*

berries, somewhat similar to black currants, called here broosnicka, *vaccinium vitis idæa*. I continued over a flat country, and lakes communicating with one another by small streams, suffering much at times from the cold, especially in the knees, which, although not sensibly cold, had a feeling of deadness and painful fatigue, which I could not account for, till a pedlar explained to me, by signs and words, that if I did not alter my plan, I should certainly lose both my legs above the knees. They appeared indeed a little inflamed, owing, as he said, to the inadequate protection of the knee-joints, which, on horseback, are more than ordinarily exposed, all the defence they had being a single leather, in sometimes 30° of frost of Reaumur. I considered that I was still bound to the northward, and that the extreme of winter had not yet come upon me, and therefore thought it better to accept a pair of souturee (knee-preservers, made of the skins of rein-deer's legs), which he very kindly offered. The service they did me is astonishing; from that moment I had less pain and more heat, and became fully satisfied that the extremities alone are to be taken care of. The golden rule, which I have never found to err, is, always to follow the example and custom of the natives; whether in a hot, cold, or temperate clime, *they ought* to know what is most necessary or proper.

On the third day after my departure from Zashiversk, my liquor was at an end from the effects of a very common sort of leak; it had been tapped too often. I could do nothing but bull the barrel, that is, put a little water into it, and thus preserve at least the appearance of vodkey. The nights were particularly beautiful, and the moon was visible during the whole twenty-four hours. My

and now become painful from the effects of snow on the eye-lashes, but I was still content, moved forward cheerfully to the scene of my station. On the sixth day, over a miserable the fatigues of which it is useless to repeat, reached a miserable abode, whose inhabitants in a state of actual starvation, completely resigned to their fate, and only wishing to die. Resistance had some effect in rousing them, and tea had more, for they determined to accompany us to the next post station, whose inhabitants, at my instigation, gave them a part of their own although their supply of the wants of nature as frugal as they were, but scarce supported their own lives." Over lakes, and through low forests, I at length reached the summit of the chain of mountains which separate the commissariats of Zashib and Kolyma; then, descending rapidly, entered a charity yourte twenty miles further. I found a fire already lighted, owing to the consideration and orders of Baron Wrangel, who had a man employed here until the whole expedition has passed. The eighth day I reached Sorok, three hundred and twenty miles from Zashib.

This stage was accomplished with great difficulty, owing to the unusual depth of the snow, the wretched condition of the horses; mine failed. The late high winds had also obliterated every trace of the path, and we were freely obliged to return and start afresh, sound the depth of the snow as we went. At length, however, we arrived, and in good health, although the weather was now become very severe.

Sordak there is a post-house and a corporal and a few Cossacks, with a few other yourtes for the natives, who cut and bring hay and fire-wood, and

fish and hunt ; in short, they maintain the establishment upon the terms of paying no yasack. They also accompany the post and other travellers, and return with the government horses. This may serve, therefore, as a description of the other stations, of which there are but eight in the whole route from Yakutsk to the Kolyma, a distance of eighteen hundred miles. The country round Sordak is low and marshy, with numerous lakes and much fine wood, and is indeed far superior to that on the southern side of the hills. The under officer who keeps the station, is grandson of the celebrated Vladimir Atlassof, who discovered, and in part conquered, Kamtchatka. He entered into a history of his adventures, very little of which I understood. He is marked by a vermilion spot on his cheek, and subject to a complaint called imerachism, which will be hereafter mentioned. His present occupation appears to consist in forwarding a quantity of youkola and frozen fish for the assistance of the expedition at the Kolyma ; he is at the same time actually making a complaint to Baron Wrangel, of the people under his command being in a state of starvation ; in spite of which, he is willing to sell their provisions. Alas ! what will not man do, even in the most remote wilds, for the sake of lucre !

Among the guests at Sordak was the priest of Sredne Kolymsk, or Middle Kolymsk, who had arrived to christen some infants, as well as, perhaps, to drink an extra allowance of spirits ; for his reverence informed me, that the glass was at 43° of frost of Reaumur, (although, I suppose, he understood as little of a thermometer as I did of the Greek mass,) in spite of the fineness of the day. *The sun, in fact, was visible, although I was a lit-*

orth of the arctic circle, the date being 10th
 December; one more convincing proof how
 hitherto understood the reflective or refrac-
 power of the sun in arctic latitudes. This cir-
 cumstance I hope will have some weight in esta-
 blishing the character of the late Mr Hearne, who
 hardly, in his dark age, be supposed to have
 stood the very nice calculations which appear
 to occupy the exertions of the present expedi-
 tion; Mr Kenzie may be found equally incorrect,
 having made an allowance for a modern im-
 munity.

Having well refreshed ourselves with the flesh
 of a wolf and a horse, which had, the day before,
 fought each other to death, we departed on the 14th
 towards the Kolyma. The first night we put up at
 a house, forty miles, encompassed by squalling
 wind, growling and howling dogs, and a scolding
 maternal hostess. There wanted only a smoky
 fire to render it complete. Having procured

for the night, on the morrow we departed,
 not before I had got into a scrape, for hanging
 up my cap and gloves upon the pins which bear the
 name of worship. The infuriated woman com-
 plained to the Cossack of the insult. The Cos-
 t told her I was an English pope, or priest, and
 that I was privileged; the length of my locks, as
 well as my beard, was proof positive, and thencefor-
 ward I was called the English priest.

The second day we reached a large and neat
 house, inhabited by two aged brothers who had
 become Christians. The eldest had discarded two
 wives as a proof of his faith, although the
 younger had buried three, and was enjoying hap-
 piness with a fourth,—no great sign of his faith, or
 attention to the orders of the Greek church,

which only permits three marriages. Next day I crossed the Alazea, a considerable river, running into the Frozen Ocean. This part of the world is most abundantly rich in fish, game, and cattle; and the few inhabitants upon its banks live exceedingly well. They supplied me with a couple of geese, with ducks and frozen fish, which is of the first quality. From the Alazea I kept company with a pedlar, half Yakut and half Russian. I have seen several of this mixed breed; and, although their parents are ordinary in appearance, I have hardly ever seen the children, whether male or female, otherwise than with the most beautiful skins, and pleasingly formed features. They have also a delicate appearance, which adds much to the general interest.

On the 19th December I reached Sredne Kolymsk, being one hundred and fifty miles from Sor-dak. The day was very cold, but the weather was calm. The country has been very low, but I am now getting into the vicinity of elevated lands. Crossing the magnificent stream, I shortly reached the town, or commissariat, where an empty house was soon provided for me; and being supplied with firing, attendants, and provisions, I regaled myself, through the kindness of the commissary; and, in short, remained nearly five days, owing to their inability to supply me with a fresh Cossack. The interval was employed in walking about, making observations, and compiling this narrative.

The priest having, with the commissary and principal people of the place, paid me a visit, the former entered my habitation, crossing himself, as is customary; then advancing to me, who stood offering him my hand in the English style, I was *honoured* with his blessing, which I acknowledged

change of the compliment. The old gentleman, in astonishment, and, demanding what I was, my Cossack answered I was a priest; upon which the reverend gentleman observed he was in error, as one priest does not give a benediction to another. He then, however, expressed his friendship for me, and, in token of the effects of my beard, and its value to me, though less to the priests of the north, rose from the circumstance of the Yakuts, who frequently with the right hand open, supported by the left, which I interpreted in token of alms, and accordingly gave them bread to eat. This, however, they evidently did not still continued their supplicating posture. My Cossack afterwards gave me to understand I was mistaken, for that they were begging.

I therefore determined to satisfy the Yakut who appeared during one of my excursions along the river; and when a well-dressed Yakut, or prince, demanded my blessing in token of alms, I gave it to him in the Russian style, as is done to his family. When I left them, the prince presented me with a souma, or leathern bag, and, in token of friendship, kissed my hand, and insisted upon my giving him a couple of sables; nor could all my endeavours induce him to take them back, that being considered the greatest insult; nor, indeed, will any thing be received for a religious offering on the northward a little tobacco, a knife, or flint, is considered an acceptable present.

The Kolymsk stands upon the left bank of the Lena, and is the residence of the commissary, and a few attending Cossacks. There are also about twelve or fifteen inhabited villages, containing about one hundred people;

though with its outhouses, baths, &c. it has the appearance of a large village. Its central position is the principal reason of its adoption as the residence of the commissary; producing immense quantities of superior fish, serving equally for their own consumption and that of their dogs, which are numerous, it is also eligible.

With a poor hobbydeboy fellow, in lieu of my faithful and affectionate Cossack Peter Trechekoff, I departed on Christmas day, in spite of the remonstrances and invitation of the commissary to pass the holidays with him, and, directing my route along the river Kolyma, could not repress an inclination to melancholy, and a feeling of the loneliness of my situation. I felt that all my sorrows were yet to come, and that my difficulties had hardly begun. Yet my determination was firm, had appearances been ten times worse.

At twenty miles I visited an old Yakut prince, upwards of ninety years old, in the perfect enjoyment of all his faculties. He was a companion and acquaintance of the unfortunate Shallaouroff in the year 1764, then fifty-six years ago, when that adventurous person completed two expeditions to the Frozen Sea, and is supposed to have perished in the third. I inquired of the old man respecting Billings and his party; he said that was as yesterday. He has a comfortable dwelling, and is in good circumstances, though he told me a subsistence by the chase seems very precarious now-a-days, as most of the animals, especially the reindeer and elks, have been driven to the north and east.

Here I quitted the river, and then over a flat country, abounding in lakes and low brush-wood, *completed* forty miles; the weather was exceed-

ingly cold, the thermometer never being above 35° of Reaumur. The hills to the east had gradually disappeared, and the following day we reached fifty miles by a good path, and comparatively little fatigue.

The third day I made thirty, and the fourth day forty miles, mostly along the river, and through and over broken ice, which made the journey very tedious, starting early and arriving late. The habitations in this district, whether peopled or not, are much more comfortable than in the others, and it is but justice to the people also to say, that they are cleaner and better clothed. On the fifth day I started at one in the morning, and reached sixty miles, the greatest journey I had made in one day, in 35° or 36° of frost. I was obliged from the cold to dismount at least twenty or thirty times, to take a run for mere self-preservation. At forty miles, at three in the afternoon, we drank tea in a bush, and at eight or nine in the evening reached the station called Malone, exceedingly fatigued. I soon recovered, however, through the kindness of a venerable Russian merchant who happened also to be travelling and trading that way, though nearly eighty years of age, sixty of which he had passed in Siberia, and twenty in Archangel. His present voyage, in his latter days, appears to have been a losing one, arising from the circumstance that the paper currency has been recently changed at the capitals, with only a short warning to this distant point, where the new issue has not yet arrived. The pedlars of this place are thus thrown out of every means of earning a profit with money for another year, while the chances to the commissaries and other civil official traders are proportionably increased—unless at the sacrifice of

20 and 25 per cent to those persons whose functions ought to restrain such a proceeding. The old merchant was, however, still able to give me tea and a glass of corn spirits, my own having been long since consumed, with every other species of provision. I contrived, however, through the kindness of the people, always to have plenty of fish, which was generally my principal food, in preference to the game which was offered to me, but which I much disliked.

At Malone the track for horses is in general finished, though they do sometimes go as far as Nishney Kolymsk, and even to the Frozen Sea, in search of sea-horse and mammoth's tusks. I was now provided with thirteen dogs and a driver, and a vehicle covered over with a sort of frame and oil-cloth, to keep out the cold, as it was thought too great for me to withstand. A bear skin and warm blanket and pillow were also placed in it, in such a manner that I might lie down, be warm, and sleep at my pleasure. I got in, and it was closed after me; not a breath of air could enter; so that, notwithstanding the intense cold prevailing on the outside, I was obliged to make my escape from the suffocation within, by taking out my knife, and cutting a way through to gain fresh air. I have seldom been so sick or so angry; and baring my head, neck, and breast to the cold, and pitching the covering into the snow, in this expose state I resumed the journey. The dogs ran well but, from the effects of the severe cold, they were compelled to rest a few minutes at every four miles besides at other times, as often as was necessary let me have my run. Indeed, the want of exercise cruelly afflicted me. I never was so distressed from the cold; the half-hour stages bet

every three or four miles were sufficient to freeze and fret my face desperately ; and it then required no little self-command to be able to resume the exercise so necessary to counteract it. Sometimes I found myself so drowsy, that the driver deemed it necessary to use all his exertions to rouse me. He behaved with great kindness, and has secured my grateful recollection.

We reached fifty-five miles with the same dogs, and put up for the night at a Yukagir hut. Resumed next morning, with increased cold, though calm weather, and reached Nishney Kolymask at noon, amid 42° of frost, according to many spirit thermometers of Baron Wrangel's, on the last day of December, 1820, after a most tedious, laborious, and to me perilous, journey of sixty-one days, twenty of which were passed in the snow, without even the comfort of a blanket—a great oversight, I will not call it fault, of my worthy friend Mr Minitsky ; nor had I even a second coat, or parka, nor even a second pair of boots, and less clothing than even the guides and attendants of the poorest class. I could not therefore but feel grateful for my safe arrival at such a season of the year, in such intense cold, and with only the upper part of my nose between the eyes at all injured. Had I not received the knee-preservers, I believe I never should have arrived safe, unless by walking the whole distance ; for when once the knees are frost-bitten (mine only complained) in a serious manner, adieu alike to them and life !

I met, at Nishney Kolymask, the Baron Wrangel, and his companion, Mr Matiushkin, a midshipman. It was the last day of the old year, and in the present enjoyment of a moderate meal, a hearty welcome, and *excellent* friends, I soon forgot the

past, and felt little concern for the future. Quarters were appropriated me in the baron's own house; and with him, on the shores of the Frozen Sea, I enjoyed health and every comfort I could desire.

CHAPTER VII.

Nishney Kolymsk—Ostrovnyaya Fortress—Description of the Fair held there with the Tchuktchi tribe—Observations on that People, and on Baron Wrangel's Expedition.

ON the morning after my arrival at Nishney Kolymsk, and while at breakfast, I received, as a new year's gift, a couple of large fish in a frozen state, weighing each five or six poods, or about two hundred pounds weight. I inquired for what they were intended, and learned, that I could not be supposed to have brought fish with me for subsistence ; and that, as the season had already passed for laying in a stock, the inhabitants of course knew that I must be in want. During the forenoon I also received a parka, or leather frock, to be worn during my stay in the Kolyma. It was a handsome one, mounted with sables and martins. To these were added trowsers, cap, boots, and leather hose ; in short, every article of dress that could be desired, and sufficient to have served me at least a twelvemonth. Besides these articles, I was also provided with a bear's skin for a bed, and a leather covering for a blanket, lined with hares' skins. Gloves were supplied me through the care of the ladies ; and Baron Wrangel, at whose house I lodged, crowned *these* benevolences, besides his

NISHNEY KOLYMSK.

ral kindness, in making my situation absolute-
nviabie, by fitting me with a complete suit of
dress of the country, to be used if necessary,
retained as a sample of the costume in those
rthern parts. By these kind and considerate
pplies, both of provisions and dress, I was en-
abled to take my daily exercise with impunity, and
ould not help recalling to mind the words of Prior,
which were fully realized in my case :—

If any nation pass their destin'd days
Beneath the neighb'ring sun's director rays ;
If any suffer, on the Polish coast,
The rage of Arctos and eternal frost ;
May not the pleasure of Omnipotence
To each of these some secret good dispense ?

Baron Wrangel's expedition I found in a state
of much forwardness, great exertions having been
used in collecting dogs and drivers, and provisions,
as well as in making new nartes, or sledges. I
learned that it would depart from the Kolyma in
the month of March, in two divisions,—one having
for its object the solution of the question regard-
ing the latitude and longitude of the north-east
cape of Asia ; and the other, a journey due north
from the mouth of the Kolyma, in search of a res
or supposed continent, or rather the continuatio
of Asia to where it was imagined by some to jo
the continent of America. I did not hesitate
volunteer my services ; but in consequence of
being a foreigner, I found my offer could not
accepted without special permission from the
vernment. I therefore made up my mind to
out for the fair of the T'chuktchi, and to try
fortune in getting a passage through their c

and so to cross over Behring's Straits for Ame-

ring the months of January and February are variously employed, as the nature of the weather would allow, passing the time agreeably and pleasantly enough. Among other things, I brought a journal, and worked some observations for latitudes and longitudes of Nishney Kolymsk. The Baron also placed at my disposal some interesting objects, which Baron Wrangel had brought with him. Sometimes we joined in the amusements of the natives, and visited them in their feasts, which were very numerous, and at which there is a great consumption of liquor. The ice mountain was one of our amusements, and our time was not hanging heavy. I descended it daily during the *fêtes* with one and sometimes two young natives on my knees, who expressed no fear in trusting themselves with a novice. Our conversation was chiefly relative to the expedition; each period something to recommend, either for immediate benefit or as a future precaution; among which, I was so fortunate as to propose some which appeared and proved of service to the expedition, and which were either adopted or approved upon by the Baron. I have seldom known a young man better qualified for the task imposed upon him, or one who possessed a more fertile genius. For his kindness to me I must

Forty degrees of frost of Reaumur never appeared to affect us in calm weather so much as ten or fifteen during the time of a breeze ! yet, to witness the aurora borealis, I have repeatedly quitted my bed in those extremes of cold, without shoes or stockings, and with no dress on but a parka, or frock.

To prove that I do not magnify the extremes of cold in that part of the world, I beg to refer to Mr Sauer's account of Billings's expedition, and the present Admiral Saritcheff's account of the same, when 43° of Reaumur, or 74° of Fahrenheit, were repeatedly known. I will, also, add my testimony from experience, to the extent of 42° . I have also seen the minute-book of a gentleman at Yakutsk, where 47° of Reaumur were registered, equal to 84° of Fahrenheit. There can, indeed, be but little doubt that the local situation of the Kolyma, bordering on the latitude of 70° , and almost the most easterly part of the continent of Asia, is a colder one than Melville Island, or the centre of the American Polar coast. Okotsk, Idgiga, Yakutsk, Tomsk, and Tobolsk, are considered equally cold and exposed as the mouths of the Lena, Yana, or Kolyma. Even Irkutsk, about the latitude of London, has yearly a frost of 40° of Reaumur, or 58° below the zero of Fahrenheit ; yet the utmost degree of cold that I have observed, I have never known attended by that crackling noise of the breath which has been related, nor with those other strange sensations which some have described ; though I have seen axes split to pieces, and witnessed the ill effects of touching iron, glass, or crockery, with the naked skin, which will infallibly adhere to it. However, I soon had reason to consider the coldest day as the finest, because it was

y five miles long, and opposite to the junction of the river Aniuy. Formerly the town was miles lower down, but the bleakness of the soil, and its consequent exposure to the north-east winds, induced its removal to the present site, where it is protected from them by a range of hills. The island is covered only with low brush-wood, but receives fine timber, which is floated down the river. No cultivation can of course be carried on in a climate wherein scarcely a blade of grain is to be seen; the horses, which do some-thing in its vicinity for a few days, feeding on the tops, stumps, and bark of the bushes, or the moss. The inhabitants manage, notwithstanding, with great labour, to feed a couple of hundred people; though to do this they are obliged to bring provisions from eighty miles. They are mostly Cossacks, half-a-dozen pedlars, and three priests, the rest of whom carry on some traffic. These retail traders seem to have adopted the practice

being reported by one another. Baron Wrangel, however acceptable he deemed the extra masses, insisted upon the observance of religious worship every Sunday.

The occupation of people in this part of the world naturally depends upon the season. Laying in wood for fire, hunting, and trading, are the winter occupations ; while fishing and fowling are almost the exclusive employment in spring and autumn : summer is generally the building time, the wood for which is floated down the Kolyma from Sredne Kolymsk. The women embroider gloves, caps, boots, shoes, and various things in a neat manner. Farther on, to the southward, they also attend to the breeding of cattle. Fishing may, however, be termed the grand concern, employing, as it does, alike men, women, children, and dogs.

The quantity of fish caught is prodigious, as will be inferred from the following account. From Nishney Kolymsk to Malone is a distance of eighty miles ; the number of inhabitants in the two places may be six hundred, and these consume nearly two million pounds of fish. Now, allowing one hundred and twenty families to represent the six hundred individuals, it follows that each family receives a portion of about fifteen thousand pounds of fish annually, or forty pounds a-day. Nor is such a quantity by any means too large, considering the number of dogs, which are generally allowed each ten herrings a-day, at least during the period of work. In the distance above alluded to, there may be about eight hundred dogs, which consume above four thousand pounds of fish daily, during half the year : the other half they prowl about on the banks of the river and lakes, and by their sagacity provide their own subsistence. Indeed, were it not

...ing a space of four or five minutes.
The fish caught in the river Kolyma are of various kinds, but most of them I can only denote by native names, as the nailma, moksou, osioter, sturgeon : the salmon is fine and plentiful, and is verily delicious ; from the roe of the last is made the black caviar ; but herrings are the most common of all. The sturgeon is converted into kila, or dried fish, for the inhabitants, while the moksou is similarly prepared for the dogs ; the other kinds are generally boiled or eaten raw by the natives and dogs ; the former is deemed a most expensive plan. The species of fish allotted to the natives are only in cases of great necessity consumed by the men ; such for instance was the case between the years 1812 and 1819, when a famine prevailed to so alarming a degree, that the poor were obliged to eat the dogs as they died, although, as it credit be it recorded, they never, even in such circumstances, killed them. Indeed, these animals constitute the greatest part of their

Formerly, this part of the world was highly productive in furs, the Emperor receiving a tenth of each sort, which has at times amounted to as many as five thousand sables ; but now-a-days less than so many hundreds, a quantity barely sufficient to pay the yasack. The shores of the Icy Sea are still much frequented by the white, blue, and red fox, and near the woods valuable sables are still to be met with. In the rivers the vidra, or river otter, is in much estimation. Upon the whole, however, it appears that the inhabitants look to the Tchuktchi for their winter clothing and most valuable fur trade. The animals of the chase seem to have been forced from the central to the extreme parts of Siberia, and thus the elks, rein-deer, and argali, or wild sheep, are but rarely met with in the commissariat ; they are now more within the reach of the few Yukagire descendants who line the banks of the two Aniuys, and chase those animals beyond the frontiers. Game of the feathered kind is, nevertheless, highly abundant, such as swans, geese, ducks, woodcocks, bustards, and partridges ; but, as in the case of the wild animals, the inhabitants have neither the time nor the means to look after them. Could they be supplied with salt, or could salt works be established here, no spot in the world would be better supplied with food than the Kolyma ;—whereas, at present, should they be so fortunate as to take two or three years' fish during one season, it must all be converted to you-kola ; and in the second summer it turns sour and becomes maggoty, so as scarcely to be fit even for the dogs to eat.

With respect to the salubrity of the town and district of Kolyma, I fear it cannot be highly extolled, being subject to the ravages of many dis-

ases, among which the leprosy, apoplexy, venereal; and scurvy are the most dangerous. The latter alone appears, by the inhabitants, to be susceptible of cure, which is by the consumption of raw fish during the winter: in the summer the disease never fails to abate with the arrival of fresh fish. I always ate of raw fish, as well from choice, as from a wish to conform to the manners and customs of the natives, confident that time and experience must have initiated them into a knowledge of what is best for their climate. The two other diseases before named, especially the venereal, appear incurable, becoming as it were the inheritance of the children. The complaints called *diable aux reins*, and imerachism, must also be specified; the former is a most extraordinary one, and consists in an idea that the body of the patient is possessed with one or more devils, attended with incessant hiccoughs. The parties afflicted with it are generally not delicate and interesting in their appearance; and it is seldom indeed that any individual is cured. In females it prevails to such an extent as utterly prevent pregnancy. I have seen them hiccough to great an extent, as to induce me to strike on the upper part of the spine, in the hope of relieving them from the pain by a surprise of the vent. They persist in believing that a devil is in the body of the person afflicted, and that, until removed, the person will never regain health. The complaint, whatever it may be, the natives consider as an inheritance from their fathers. Imerachism, to which not only the people of the Kolyma, but also of more southern countries, are subsequently unaccountable. Instead of exciting fits, like the last-mentioned disorder, it carries it an air of merriment, as it by no means

affects the health of the person, though it subjects him to the most violent paroxysms of rage, fear, and mortification. Whatever is said or done in the presence of an imerach, will be repeated by him at the moment, however indecorous, improper, or violent the act may be. I have seen the dog-master of Baron Wrangel's expedition commit acts sufficient to frighten the person in company with him. While in an adjoining room conversing on points of duty, a slight knock at the bulk-head was sufficient to set him pummelling the person with him, merely from a principle of self-defence. Of this same dog-master, by the way, a highly amusing anecdote is related, and which was confirmed to me, not only by himself personally, but also by Mr Gedenstrom, of Irkutsk, who commanded the expedition. The theatre was the Frozen Ocean, and the imerach's dogs and narte were the headmost. One forenoon they encountered a large white bear; the dogs immediately started towards the animal, and the driver, being the dog-master of whom I am speaking, steadfastly kept his place, prudently remaining by those who only could assist him. In the eagerness of the dogs, sharpened probably by hunger, they became entangled with one another, and were almost rendered useless. The driver seeing the state to which he was reduced, resolved to attack the bear with his ostol (a stout ironed stick with small bells, which serves to stop the narte), and accordingly presented himself to the enraged bear, who immediately raised himself upon the hind legs, and began to cry and roar most bitterly; the imerach followed the example. The bear then began to dance, and the driver did the same, till at length, the other nartes coming up, the bear received a blow upon the nose, and was secured. It

appears that the nose is the only part vulnerable without fire-arms, and even then they can be secured only on being shot through the head. The white bear is, however, by no means a dangerous animal, avoiding the chase as much as it is avoided. Another instance of imerachism, which occurred in a distant part of the general government of Siberia, may be related in this place, to prevent again adverting to those ludicrous scenes which hourly attend it. Two old ladies in Kamtchatka, one the mother of a Mr Tallman, an American, who had married a Russian girl, the other, the wife of a Russian, who were both afflicted with the disease, were sitting at tea opposite one another, when Mr Tallman, in a gentle manner, put his hands behind their backs, propelling the old ladies towards each other, upon which they instantly exchanged tea-cups and saucers, while the really offending party stood enjoying the mischief. There can be no doubt that the complaint is rendered worse by the constant annoyance and irritation to which they are subjected for the amusement of others ; to say nothing about my belief that it is in many cases brought on by an habitual folly of young boys, who imitate the mad acts of the really afflicted.

Nishney Kolymsk has formerly been celebrated by the rank of the people banished thither. The famous Count Golofkin, one of the ministers of Catherine II., was for many years a resident, and ultimately died there. He was considered as a great intrigant, but of an eccentric character, a proof of which is afforded by his constant habit of putting himself, servants, and even his house, into mourning, on Catherine's birth, name, or coronation day. This open and determined opposition utterly precluded *his pardon*, and Nishney Kolymsk

contains his tomb. The conduct of a Livonian baron, at one time high in the esteem of the same princess, merited and obtained more favourable consideration. The baron successfully applied himself to the breeding of cattle in the vicinity of Sredne Kolymsk, but his pardon arrived so late, that his age and infirmities prevented his acceptance of the proffered boon, and he, his wife, and two children, lie buried in the church at Kolymsk ; his eldest son returned to St Petersburg, and became repossessed of the honours and wealth of his father. To such men an expatriation to this, the most distant part of Russian Siberia, must have been severe beyond measure ; cut off for ever from fortune, friends, rank, society, and every enjoyment that could render life desirable.

The only meteorological phenomenon which occurred during my stay at the Kolyma, was the aurora borealis. The scene fell far short of my expectations. I understood, however, that the months of October and November are the most proper to view it in its greatest splendour. Those which appeared during my stay, were generally from the north, and consisted of columns of fire moving in a horizontal direction, and generally disappearing in the south-west ; the height of the columns being from 50° to 60° . At times an immense illuminated space from north to east would advance very close to us, and throwing up rays, or rockets of fire, and forming into concave arches, approached us so near, as apparently to endanger our situation, exhibiting at the same time every colour of the rainbow. The most beautiful aurora which I saw was at midnight of the first of March ; the wind was from the north-north-west, and the glass at 36° of cold. The aurora occupied the whole circle of the heavens, at an

tion of 28° or 30° , and, gradually rising, disappeared in the zenith. The figure was as an illuminated tent, with festoons, or fringes, at the lower and which had an appearance as if constant-receiving accessions of fire, which were equal-distributed to it from every part of the foundation of the tent. The illuminated part gradually diminished in splendour as it approached the horizon. It lasted about two hours, and did a little to the electrometer. The view of it was rendered exceedingly fine and interesting, from the nature of our situation being, as it were, in the inside of a tent.

Among the books in our library was Captain Burney's Chronological History of the North-eastern Discoveries, and of the Early Navigation of the Russians. It appeared to me so extraordinary a production, and so deserving reply, that I addressed a memorial or letter to that effect to the Royal Society. Whether that learned body has received it or not, I am unacquainted, at least in an official manner. As connected with this journey, I certainly considered it becoming the attention of the Royal Society, because the memorial was expressly addressed to that body, and was only rejected from a want of form. Mine was also formally faulty, and consequently could expect no reception, being addressed, not to the *President and Secretary*, but to the *Secretary and President*, of the Society. Although Captain Burney paid the debt of nature, still, contrary to the opinion I entertained in the first edition of this work, I consider it highly proper to annex a copy of the memorial, together with a map. To prevent mixing with this narrative, and to leave it for

ed by twenty nartes and two hundred do narte carried about one thousand two pounds weight; but in consequence of part of the winter having been employed porting provisions, &c. to the Great Baran to the east of the mouth of the Kolyma, be enabled to proceed fully laden from as well round the north-east cape of Asia northward, in search of strange lands; also return to Cape Baranov, to be again with food to enable them to regain the Nishney Kolymak.

On the 4th of March I left the Kolyma pany with Mr Matiusbkin, midshipman, and merchants, whose nartes were loaded with and iron utensils. The weather was fit being but 25° Reaumur of frost; yet we got more than fifty miles, before we were to halt, on the banks of a lake, being unable to make out the path, from the depth and d

unfortunately situated, that no fire could be kept in, even had there been fuel. The next day we passed through a thick forest of the greatest danger of broken heads, going at a velocity almost incredible, and at every descent a hill dashing up against the trees. Thirteen sledges were provided for me. We made thirty-five miles in this manner, and reached the little Aniuy, a considerable, rapid, and dangerous river. A charity school received us for the night, and we fared very well in the low lands, which extend from the Kolyma eastward, being now passed, we entered on a cultivated country, and were cheered with meeting and overtaking a great number of sledges, whose drivers exhibited the same smiling faces, the result, I think, of as sanguine hopes, as those of the great fairs of London or Amsterdam, on the eve of the opening of a great fair. The right bank of the Aniuy is formed of slate mountains, the left is a most uninteresting flat. The river, which has many islands in it, winds a good deal, and exhibits a most beautiful scenery.

The descendants of the Yukagiri inhabit the banks of the two rivers Aniuy, and serve as a sort of buffer nation between the Russians and Tchuktchi. They were formerly a formidable and warlike people, and it cost the Russians much trouble to subdue them. Indeed, in such fear were they held, that Empress Catherine absolutely forbade their names to be spoken. They are now all but extinct as a pure race, but one old woman existing whose parents were both Yukagires, and who really understands the language. The remainder are intermarriages of Russians, who have intermarried with them. They are certainly the finest race of people I have seen in Siberia; the men well proportioned.

The descendants of the Yukagiri inhabit the banks of the two rivers Aniuy, and serve as a sort of buffer nation between the Russians and Tchuktchi. They were formerly a formidable and warlike people, and it cost the Russians much trouble to subdue them. Indeed, in such fear were they held, that Empress Catherine absolutely forbade their names to be spoken. They are now all but extinct as a pure race, but one old woman existing whose parents were both Yukagires, and who really understands the language. The remainder are intermarriages of Russians, who have intermarried with them. They are certainly the finest race of people I have seen in Siberia; the men well proportioned.

portioned, and with open and manly countenances; the women are extremely beautiful. What their origin was, it is now difficult to say; although they were doubtless of Asiatic origin, their features partaking of the Tartar aspect,—to say nothing of their enmity to the Tchuktchi, while they have a great friendship for the Yakuti or Tongousi.

The third day we reached an inhabited yourte, where many of the merchants awaited us, as they could not go to the fair before a certain time. The river was also in some degree an impediment to their proceeding, as the velocity of the stream prevents firm ice being ever formed. Two of the merchants, in attempting the passage, got a severe ducking, and narrowly escaped with their lives; the breadth of the path being but five or six feet, and so slippery in some places, that, unless the driver be very well qualified and accustomed to the place, it is difficult to prevent accidents. The wood on the Aniuy is of considerable growth for so northern a situation; but the root has seldom more than twenty inches depth.

I witnessed, for the second time, the first being at Sordak, the mock suns and moons, and columns on each side of them, at equal distances; but these parhelia were by no means brilliant, owing, as it appeared to me, to the rather warm weather. I shall therefore await more favourable appearances, before I attempt their description.

On the 8th of March we reached the Fortress, the river bordered with the same elevated slate lands on the right, and low flat on the left, bank. *At seven miles on this side the fortress, the scenery begins to improve; and the fortress itself may be said to be a most romantic spot. It is distant from the Kolyma one hundred and fifty miles, and de-*

ring summer the place must be very pleasant. There are twenty yourtes, about two hundred people, and a large wooden building, fit for any thing except defence. The whole stands upon an island, surrounded by elevated and well-wooded hills. There is very little grass, but much moss. The view of the river is exceedingly picturesque; and the fortress is decidedly the most favourable place to reside in I have seen from Yakutsk, a distance of at least two thousand miles.

The inhabitants on the banks of the river are not numerous, and subsist very scantily by hunting, there being few fish in the river. Famines are therefore of frequent occurrence, bread not being supplied by the government. Elks, rein-deer, and argali, are what the people most depend upon; formerly they were abundant, but are now much reduced, owing to the peopling of the country by the Russians, who hunt rather to exterminate the breed than to procure subsistence. During the fair, the inhabitants make the best of their time in trading, and becoming after that a sort of storekeepers to the other traders.

Having settled ourselves in a small Yukagir yourte, Mr Matiushkin and I received a visit from one of the Tchuktchi, a most empty countenanced and wild looking savage. He entered the room where we were, tumbled himself down upon a stool, smoked his pipe, and then quitted the room, without once looking at, or taking the least notice, either of us or any thing about us. The commissary having made his appearance, it was determined to commence the fair, by first installing two of the *chiefs with medals and swords*, baptizing them, *and receiving a nominal tribute*. The morning was *showered in by the arrival of these persons in state*,

dressed in their gayest apparel, and seated in a beautiful narte drawn by two rein-deer, the whole forming a cavalcade of twenty-five or thirty pairs. Having reached a large storehouse, to which the altar and images were carried, the priest proceeded to baptize the two men, their wives, and three children; but instead of being merely sprinkled with water, they, men and women, were obliged one and all to strip, and to be three times plunged in a large iron cauldron of ice-water, with the thermometer on the spot at 35° of Reaumur, with no part of their dress on except their trowsers; and were afterwards directed to bathe their feet in the same cold water. I could not help pitying the women and children, the former of whom, having long hair, became, as it were, enveloped in icicles. A small cross suspended round the neck, with many difficult and almost useless injunctions how to pronounce their newly acquired names, completed the ceremony. A quantity of tobacco was then given as a present to each of the new converts, by way of inducing others to follow the example. Instances having, however, occurred of late of Tchuktchi being twice baptized, and even of presenting themselves a third time, for the privilege of the presents, the good people of Irkutsk begin to be tired of sending either their missionaries or tobacco to such a people; nor do I think such a determination, with regard to other equally devout, but more unsuccessful missionaries, would cause much regret in the minds of the more tolerant, but less fanatical, part of the good people of England.

The ceremony finished, the same cavalcade, joined by the other chiefs, or toions, of the Tchuktchi, proceeded to the abode of the commissary, whither *Mr Matiushkin* and I followed. The commissary

then made the usual declaration, that the fair could not begin until he had received a tribute for the Emperor Alexander; on which the principal traders advanced, and laid each a red fox skin at the feet of the commissary. The names of the donors, and the value of the skins, were then regularly entered in the official records, and the commissary proceeded to invest two of the chiefs with a medal and small sabre, reading to them publicly a letter, which he is supposed to receive from the chief of Yakutsk, declaring it to be the Emperor's order so to invest the chief, or toion; the clergyman then advanced to give his benediction to them, and the poor ignorants became quite happy, quite proud, and ultimately quite drunk.

The next topic started was that of my desire to accompany the Tchuktchi through their country; and this seemed to require more generalship than all the others. The commissary, through an interpreter, commenced by informing the Tchuktchi people, that the "Emperor, understanding two strange ships had appeared upon their coast, was willing to know who they were, and had accordingly sent with them, agreeably to their request, two interpreters, one of whom understood their own language as well as the Russian, while the other, (meaning myself,) understood the languages of most maritime nations. The commissary desired, as from the Emperor, that all due care should be taken of, and all due respect paid to us, especially to myself, who was one of the chief interpreters of the empire." After this opening harangue was completed, the turn of which inspired me with some degree of hope, one of the most respectable of the Tchuktchi got up, and said, that "he was in want of no interpreter, and therefore would not take one." This

laconic reply completely disconcerted us. The next an old and cunning fellow, called Kacharga, said, "that boys and girls should not be attended to in a case of such importance; that he, a chief, had not demanded an interpreter, although a nephew of his had done so." He expatiated upon the impropriety of taking from those youths a communication of such importance, as should alone have come from a chief. I could not but approve the justice of the remark, and began to suspect the whole was a hoax, and that they had not made any demand of an interpreter. It was therefore told them, that "two nartes would be of no great consequence to them, and that as the Emperor had so sent, they ought to take us, for that we dared not return to merit his displeasure." A fresh consultation was hereupon held by the savages, and they came to a determination, "that as the great Emperor *himself wished* to send two interpreters to Behring's Straits, of course he could have no objection to pay for the transport of such people." Upon inquiring what demand they would make, they said "fifty bags of tobacco," a quantity equalling one hundred and twenty poods, or near five thousand pounds weight. To make such a present in advance was madne in me to think of, and the project appeared, as i deed it proved, to be wholly lost; for they add that he "could be no great Emperor who could make so small a present, seeing that he could command the riches of all his people." They also served, that "I must be a poor interpreter if I cannot satisfy the demand myself!" Alas! they n as well have demanded five millions as five thou pounds of me. One of the knowing ones obse and I mention it as evincing the sagacity of people, that "he doubted whether I was an

preter of the great Emperor's," saying, "that I could not even speak the Russian language, for that he noticed the Russian Cossack interpreted from the Tchukskoi language to Mr Matiushkin, and Mr M. again in a different dialect to me." All this was too true to be denied. They then asked, "of what use I could possibly be to them, when I neither understood the Russian nor Tchukskoi languages?" This last truism quite appalled the whole of us, and from that moment the point was given up. It was not a little singular that these rude people should all along have known that a third toion, or chief, for I was considered as one, was in the fair, and demanded who and what he was. I have, however, no idea that their refusal arose either from fear or ill-will, but simply from avarice.

I next day visited their camp, distant about two miles and a half. It consisted of three large and three small tents. The former contained the bulk of the Tchukskoi people, and the latter were appropriated to the chiefs and more considerable people. The large tents were disgustingly dirty and offensive, exhibiting every species of grossness and indelicacy. But the smaller were, on the contrary, very neat, clean, and warm, although without a fire, in 35° of frost. Indeed they were to me almost suffocating, being only eight feet long, five broad, and about three feet high; and containing three or four people huddled together in one bed, which is made of rein-deer skins, and the coverings lined with white foxes'. The small tents are made also of the old and hard skins doubled, so that the hair is both on the inside and out; a large lamp, with whale oil or fat, which serves them for a light, communicates also considerable warmth. On entering one of these small dwellings, I found the chief and

his wife perfectly naked, as was also a little girl, their daughter, of about nine years old,—nor did they seem to regard our presence, (Mr Matiusshkin was with me,) but ordered the daughter to proceed and prepare some rein-deer's meat for us ; which she did, in that state of nudity, by a fire close to the tent. Having lolled upon the bed about a quarter of an hour, we were treated with the rein-deer meat half boiled, of which we of course partook out of compliment. I was, however, obliged to cut short my visit, from want of air, and the most offensive smell I had ever endured for so long a time. The toion, or chief, was a little angry with me for quitting him, and imputed it to his having the previous day opposed my design of going through his country. Their furniture consists of a large kettle, knife, wooden bowls, platters, spoons or ladles, and an axe, with flint and steel. Having thus informed myself of the savage state in which they live, I returned to the fortress, driven by one of the chiefs in a neat narte, drawn by a couple of rein-deer in a prettystyle. They use regular reins, made of leather thongs, and a long springing cane, with an ivory knob to it of the tooth of a sea-horse ; the latter is exercised occasionally upon the rump of the animal, on which it is capable of inflicting a pretty severe blow. I must, however, do justice to the Tchuktchi for their very kind treatment and conduct to their brutes, whether dogs or rein-deer—appearing quite to consider them as pets. Nay, to so great a degree is this feeling carried, that among this savage nation it is considered unmanly even to ride ; in all ordinary cases they prefer to walk, and in every other way appear solicitous to lessen the labour of the animal, permitting only the women and children to sit in the nartes when upon a journey.

On our return to the fortress, the fair was formally commenced by an harangue of the commissary's, declaring the terms, the tax, and the penalties. The Tchuktchi had in the mean time ascertained the quantity of tobacco in the market by means of their emissaries, who are exceedingly inquisitive and cunning upon that point, their rudeness and apparent equality giving them free access to every dwelling which contains any of that commodity. They have their own mode of calculating, and, before the fair is commenced, they fix the price of their goods, to which price they adhere more strictly than the Russians. The fair is held upon the river Aniuy, opposite to the fortress. Early in the morning the Tchuktchi arrive at the place of barter, and forming a semicircle towards the fortress, the extremes of which reach to the edge of the ice, dispose their furs upon their nartes, the owners constantly remaining by them. In the mean time the Russians place their large bags or bales of tobacco in the centre of the semicircle, and then begin to parade and visit the Tchuktchi, inquiring the prices, &c. by means of an interpreter. The work entirely falls upon the Russian, who drags behind him, for many hours, two hundred-weight of tobacco, before he can induce the Tchuktchi to barter. The tobacco, on the first or second day, cannot be exchanged below the terms of an agreement made between the merchants, as three or four people are so posted as to ascertain and judge of the conditions and their validity. Still, however, they do manage to cheat; but on discovery the goods are forfeited, and the parties declared incompetent to trade any more. They are particularly guarded by the law, as to the wetting

of tobacco, or placing stones or other heavy things with it, to increase the weight.

It is ludicrous enough to stand upon the banks of the river, and wait the appointed signal for commencing barter each morning. While the Tchuktchi are quietly sitting on their nartes, with their sleeves drawn back, and their arms thrust into their bosoms to keep them warm, the Russians, on the contrary, start pell-mell; pots, pans, kettles, knives, swords, hatchets, scissors, needles, &c. are rattling in every direction, like so many chimney-sweepers on May-day; priests, officers, Cossacks, and merchants, men, women, and children, alike fantastically dressed, with articles of traffic, of which tobacco constituted the chief. A few bells, pipes, and corals, also served to grace the dresses of the more wealthy and whimsical pedlars. For all the small articles the Russians readily enough received fresh meat, which was much wanted. The heavier skins and sea-horse teeth also were ready for sale by the Tchuktchi at a reduced price; but the same inducement which the Tchuktchi have to sell bears', wolves', and rein-deers' skins, namely, their weight, and the expense of transporting them, operates to prevent the Russians from buying them. Sea-horse teeth were particularly flush on the first day; but nothing would do, the tax and penalty were feared, and little business was done. No instance occurred of the Tchuktchi selling below the rule; but two Russians, brothers, were detected in it, and committed to prison until the close of the fair. The price or rate which the Russians had set, was a martin park, somewhat like a carter's frock, of twenty skins, and fifteen red foxes, for a hundred-weight of tobacco; while the Tchuktchi held it at a park and ten red foxes. The se-

cond day was brisker, and more business was done; from fifteen red foxes and a park of martins, the Russians descended, by general consent, to twelve and eleven foxes. Still the Tchuktchi generally held on, compelling the Russians, meantime, to walk about making offers. What, however, with cunning, and breaking off the agreement, a good deal of business was done. But the third and last day's fair was the best and most lucrative for the savages, when neither tax, nor penalty, nor perjury were feared; each individual, from the commissary to his secretary and priest, and from the Cossacks to the merchants, all busily employed in undermining his neighbour. I could scarcely believe that in so small a number of individuals there could exist so great and general a jealousy; but so it was, and many quarrels ensued. That my readers may the better form an opinion of what materials the people of this part of the world are composed, I will briefly say, that there is scarcely an act or circumstance, either of a public or private nature, which takes place at Irkutsk, Yakutsk, or Okotsk, which is not immediately and indirectly made known to, and commented upon by, these worthy critics of the north-east of Asia; nor is it more than an act of justice or truth, to say, that I believe them to be more generally and better educated than any other equally numerous settlement in Siberia, being of the same class of Cossacks. I hardly know of an instance of the young lads not reading and writing tolerably well.

I never saw better judges of tobacco, nor of weight, than the Tchuktchi. I can confidently assert, that they do not err one pound in the hundred-weight; and the detection of the slightest fraud on the part of the Russians, is sufficient to the Tchuktchi to

cut the party short, and deal no more with him. Their mode of trying the strength of tobacco is this : a leaf of it is taken and squeezed in the hand as hard as possible, and if any appearance of moisture be left in the palm, it is well known that the tobacco has been watered ; if the leaf preserves the compressed shape which the force of the hand has given it, it is weak, but if it recovers and expands quickly to its original size and shape, the tobacco is deemed strong. And such is their nicety of judgment in ascertaining this point, that an allowance of goods is given or received on the celerity with which the leaf returns, after compression, to its natural shape.

The last day's sale, although of course the best, was held back a little by the Tchuktchi wishing to make the Russians believe that they had no want of tobacco, as they could get it much cheaper in the bay of St Lawrence, from the ships which casually call there. Whatever trade they may carry on with those vessels, the Tchuktchi appear to know the value of a more direct and first-hand trade ; nor can this be doubtful, when the toils and dangers of their journey, and the small profits, are considered—at least small when compared with the profits they sometimes receive from the few vessels which now and then visit their coast. The fair lasted seven days, which is three more than usual ; the two first and the two last, may, however, be considered as nothing, being occupied in the lowest species of *retail*, in which deliveries are made so low as for sixpence or ninepence. Upon the last day of the real fair, or fifth from the commencement, the vodka (spirit) began to make its appearance, and its effects were successful in inducing the Tchuktchi to bring forward, for

ale, a few of the black and brown foxes. They old, however, very dear, and were nearly all taken back with them to their country.

The trade of the commissary, secretary, their friends and Cossacks, was done to so great an extent, and with so little principle, that the licensed trader could do nothing, except at considerable loss. The former have a wonderful advantage, also, in bringing their goods into the market, from being able to make padvodies, or public levies of dogs, &c. as if for the public service. This, however, cannot rank among those abuses laid to the charge of the emperor; for, if the offenders' salaries were increased tenfold, the same practice would be continued: they would still trade, and still act, in the same unfeeling way. "A want of education, or avarice, begets a want of morality."* Baron Wrangel has done all he can to remedy this evil, but the moment he retires from the scene, the same conduct will be resorted to, forming, as it does, a considerable revenue to those holding the command. All extra services of the crown, as those for the post, expresses, forwarding of the bread, spirits, and public stores, are thrown upon the poor; while priests, nobility, all officers of the crown, and Cossacks, who possess the best means of carrying such services into execution, are exempt. The poor, having no dogs, are obliged to hire them at exorbitant rates from the rich. Every narte taken for the use of the public during the fair, is a loss to the poor of sixty roubles, or near three pounds. The number of nartes which have been thus at certain times required, may be conjectured from the fact,

* *Auri sacra fames ! quæ non mortalia cogis
Pectora !—*

that, while I was there, the commissary demanded one for himself, others for his secretary, servant, Cossack, and chancellery ; and a sixth for his provisions. The chief priest also demanded severally for himself, assistant, Cossack, altar, baggage, and provisions. The object of the former was to register the receipt of twenty-three red foxes, being the yasack paid by the Tchuktchi ; that of the latter, the christening and registering of seven savages, and all the provisions they carried could not have exceeded forty pounds weight ; consequently there could have been no necessity for such padvodies ; —a demand which, by the by, Baron Wrangel did not permit being complied with, he being vested with civil and military powers over the Kolyma district. I am one of the last persons to discomtenance, in the least degree, the general design of *converting* to Christianity the savage tribes dispersed over various parts of the world, but I think it must be regretted that such projects should ever have the effect of straitening or burdening those who are *born* Christians. As to the present case, it is to be hoped the liberality of the government will extend to this distant and impoverished place, by paying the inhabitants for all services performed for the crown. This would possibly prevent much abuse, and at least have the effect of disbursing a sum of money, of little consideration to a government, though highly acceptable to the governed.

The fair at length finished, I prepared to depart for Nishney Kolymsk, with many thanks to my venerable Yukagir host for his kindness. I passed the time very agreeably at his house ; he was a very good chess-player, and was fond of the game. His manner of play added another instance

I have witnessed, that there is, in various parts of the world, little or no difference anywhere in moving of the pieces. I have played the game with Yakuti, Tongousi, and Yukagiri; but the Tchuktchi laughed at me for such a childish amusement of my time. While upon this subject I made a remark, as a circumstance relative to the game of chess, and which has repeatedly surprised me, that wherever a people recognise and play it, they are infallibly Asiatics. Neither the Tchuktchi nor the Koriaks understand any thing of it, not at all the Kamtchatdales, and other Asiatics, so familiar with it.

The features of the Yukagiri lead me to suppose them Tartars, and not a race very distinct from the Russians.

They are, however, almost Russified by marriages, and the question of their origin is difficult. There were at the fair two or three of the Chuanse, or Chodynse, a tributary tribe inhabiting the country between the two seas and the Anadyr: their features are also

The information I received from the Tchuktchians of the interpreter Kobeleff, son to the officer who attended the expedition under Capitan Collings, I will give in the same laconic style in which I communicated it to the governor-general of Siberia from Nishney Kolymsk. My letter, in its first part, described what articles were sold to the Russians; as tobacco, kettles, knives, spears, bells, scissors, pipes, axes, spoons, coral and other small ornaments, a few pieces of red and blue nankeen, and white cotton. For these the Tchuktchi brought four or five hundred reindeer teeth, a few bears' skins, reindeer dresses, white foxes'; and these, with some frozen rein-

deer meat, make the whole productions of their own country. The other articles of fur come from a nation on the American continent, called the Kargauls ; two of whom were at the fair. They bear more nearly the features of the Tchuktchi than those of the hideous-mouthed inhabitants of the islands in Behring's Straits, although with a browner or more dirty colour. The furs brought and sent by them, consist of many thousands of black, brown, blue, red, and white foxes, martins, and martin parks, some beavers, river otters, bears, wolves, sea-dogs, and sea-horse skins ; a few articles of warm clothing, and some ornaments carved out of sea-horse teeth, representing the animals common among them.

The value of the exports on the spot, taking them at four hundred bags, or forty thousand pounds weight, of tobacco, at three roubles a pound, is one hundred and twenty thousand roubles ; to this add sixty thousand for the value of the other articles, and we shall make the exports amount to about one hundred and eighty thousand roubles, or seven thousand guineas. The value of those articles at Yakutsk, as purchased by the traders, is not *one-third*, leaving, after the deducting of carriage expenses, which are considerable, a clear profit of about one hundred, or one hundred and twenty per cent, and would be much more, but that so many people trade against each other, and that the traders are altogether too numerous. The market is overstocked with tobacco, not one-half being disposed of. The value of the imports may be known by reference to the tax, recollecting that the furs bear almost the same price at Yakutsk as at the Kolymsk, although distant nearly two thousand miles by land ;

the return of the horses, however, enables the merchants to go back cheap.

A bag of tobacco of one hundred pounds weight, worth three hundred roubles, and iron work of fifty or sixty roubles value, is exchanged for a martin park, worth ninety and one hundred roubles ; fifteen red foxes, two hundred and fifty to three hundred roubles ; and a pair of boots and park of rein-deer skin, worth about forty or fifty roubles : making altogether about four hundred roubles, which brings the exchange on the spot, as nearly as can be, equal, for the tax is not adhered to. Now, if one bag of tobacco produce four hundred, four hundred bags will be equal to one hundred and sixty thousand roubles, which constitute the imports, being the same value as at Yakutsk. The merchants have also the benefit of a great trade, on their journey along the rivers, with the Yakuti ; and this is really the most advantageous branch of it, for they will extort even three and four hundred per cent.

The Tchuktchi parted with less than a third of their most valuable furs, taking the rest back. I inferred hence, that they have not the means of conveyance for more than four hundred bags of tobacco, and the other articles sold with these ; otherwise, from their love of that article, and the demand for it by the American savages, they would no doubt purchase it for the small and valuable furs. Nor is this idea of mine rendered less weighty, when I inform my readers that so tenacious are the Tchuktchi of surcharging their rein-deer, and so great is their love of tobacco, that every male adult, on quitting the fair, carries upon his own back from forty to fifty pounds weight ; until the consumption of *provisions enables him fearlessly to put it up-*

on the narte. Indeed, the demand for this commodity is so great, that at the Anadyrsk and Idgiginsk fairs the Russians do not give in barter with the Tchuktchi one-half of the quantity which is given at Kolymsk; and consequently the Anadyr Tchuktchi are prohibited by the rest of their nation from trading to the Kolymsk, for fear of spoiling the market.

There were this year at the fair, which is termed a good one, two hundred and fifty nartes, and five hundred rein-deer, with sixty-eight men, sixty women, and fifty-six children. Each rein-deer can draw three or four poods, or one hundred and fifty pounds weight. Those which come to the fair return only to the river Tchaon, where they are exchanged for those which belong to, and which had come from, the Bay of St Lawrence. Seventy-five and ninety days are required for them to perform the journey, which is about eight hundred versts, or five hundred miles.

There were three chiefs at the fair; first, Ye-brashka, who commands the tribes inhabiting the banks of the Tchaon, Packla, and Kvata rivers, as well as the country towards Shelatskoi Noss. Second, Valetka, chief of the Belo Morsky Tchuktchi, which tribe inhabits the eastern sea-coast, from Cape North to the Bay of Klasheui. Third, Kacharga, who commands the Tchukskoi Noss, or East Cape tribe, who inhabit the Noss, and the country from thence to the Bay of St Lawrence. The first are wanderers, and live by their rein-deer, which are employed for burden between the river Tchaon and the fair, and in the trade of sea-horse teeth. The second subsist almost entirely *by fishing* and hunting, added to a small tribute or *toll of tobacco*, which is paid by their southern

neighbours for a free passage along their coast ; they have no rein-deer. The third tribe subsist by traffic and the breeding of rein-deer, of which they have considerable herds, and are employed from the Bay of St Lawrence to the banks of the Tchaon. There is also a fourth chief, who commands the Tchuktchi of Anadyr Noss, a tribe who inhabit the country and banks of the Anadyr, and also subsist by traffic and the breeding of rein-deer. These chiefs live equally distant from each other, about one hundred and fifty or two hundred miles, and carry on a sort of intercourse by means of the eastern-coast Tchuktchi, who are provided with baidares.

The Tchukskoi Noss race are the most numerous ; those of the eastern coast the most warlike and hardy ; the Tchaon, or Shelatskoi, are the most friendly ; and those on the Anadyr Noss are the richest. The whole are nominally independent, but actually tributary ; for the yasack, though small, is enforced, and conscientiously paid. Their existence as an independent tribe hangs on the will of Russia, for that independence will at any time be sacrificed to retain their trade. Their whole number cannot exceed four or five thousand. The Kargauls are represented by them as far more numerous, but the Tchuktchi cannot count past a hundred, or ten tens, that is, their fingers ten times over. Each tribe has a different dialect of the same language, and all understand one another, though the dialects are extremely difficult to articulate ; so much so, that the interpreters, after the three days of the fair, are generally laid up with a sore throat.

In the conversation I had with the toions, or chiefs, (*the same word is used in America, and in*

the same sense,) I understood them to have no knowledge or tradition of any land north of theirs; that the sea is for ten months so frozen that nothing but mountains of ice are visible; and that during the months of August and September the ice breaks up, but not in such a manner as to admit a passage for vessels. They told me also that large herds of rein-deer roam from cape to cape, but do not come from the north beyond the sea. To the west of Shelatskoi Noss, termed by them Errie, (a word also of the same import as in America, signifying a great sea or lake,) they say there is a large and very deep bay, into which the Packla and Tchaon discharge their waters; and in this bay two islands, the one called Ayon, small and near the Noss, abounding in sea-horse teeth; the other, Illerie, large, and producing fine moss for the rein-deer. The latter has some few residents both in winter and summer; in the former season catching and killing wild rein-deer for the fair, in the latter, feeding the tame rein-deer. I was also told, that half-way across the south side of the bay there is a high mountain of rock, named since, by Baron Wrangel, Cape Matiushkin. That from their habitations on the Tchaon and Packla rivers to Shelatskoi Noss it is only *one* day's journey with rein-deer, a pair of which are represented by them as capable, upon an emergency, and in hard frosty weather, of drawing a sledge with one person fifty or sixty miles. Shelatskoi Noss does not, by their report, run far into the sea, but is elevated, and has a narrow passage between it and their country; in truth, an isthmus, which forms a small bay, without islands, to the east of the Noss. I was also made to understand that the coast, from the bay on the east of the Noss, trends a little to the right

f the rising sun. The Noss is formed by the Tchaon and Packla rivers on the west, and the Ivata and Ekakta on the east; and the Tchaon bay by Shelatskoi Noss and the island of Illerie; which latter will, of course, be understood as the land of Sabedei. The Pogitcha river is represented as not the same with the Anadyr, but a small yet rapid stream, which, from the east, enters the Tchaon. And, lastly, that the whole of their country is so mountainous, so barren, and so deep in snow, that laden rein-deer cannot come straight from the Bay of St Lawrence, but are obliged to coast along the valleys on the shore, until they reach the Packla, where their route changes from N.W. to S.W.

Fish is said to abound in the northern rivers on the eastern coast, as well as in the Bay of St Lawrence, which last is the only place where ships can anchor, and is formed by the Tchukskoi and Anadyrskoi Nosses. They have no knowledge nor tradition of any nation called the Shellages, but they recognise the word Kopai, as applicable to the name of a person in their language. They know nothing either of their origin or first settlement in the country, nor of the Tartar nations subject to Russia, nor do they understand any Tartar words. Their language bears no affinity to the Asiatic, though it is understood by the Koriaks. The features of the Tchuktchi, their manners and customs, pronounce them of American origin, of which the shaving of their heads, puncturing of their bodies, wearing large ear-rings, their independent and swaggering way of walking, their dress, and superstitious ideas, are also evident proofs; or is it less than probable that the Esquimaux, and other tribes of Arctic Americans, may have

descended from them, for several words of their languages are alike, and their dress perfectly similar. That New Siberia has been inhabited, there is no doubt; many huts or yourtes still existing, and there are traditions in Siberia of tribes having been compelled, from persecution, the small-pox, as well as from disease, to quit their lands for those beyond the seas.

The persons of the Tchuktchi are not peculiarly large, though their dress, which is clean, but of enormous size, gives them almost a gigantic appearance. They have fair or clear skins, but ordinary though masculine features. In conduct they are wild and rude. They have no diseases, and live to a great age; two of the chiefs at the fair being past seventy, as calculated by the number of voyages they had made, ere they accompanied Captain Billings. I did not find them idolatrously fond of spirits, as they refused to change furs for that alone, although they would readily receive it, and in preference bargain with the donors. They appeared a bold, suspicious, and irascible people, and, though very avaricious, perfectly honest, and not inhospitable. They appear to trust to their nominal independence, by concealing their actual weakness, and magnifying their numerical strength. They *have* a respect for their chiefs, and do not live in that perfect state of equality which has been supposed, though they purposely affect that equality in the presence of the Russians; when the most common of their nation will enter a Russian dwelling, behave rude and churlish, keep his cap on, take what he wants without asking, and ultimately quit without the slightest thanks, acknowledgment, or appearance of feeling. *The chiefs, on the contrary, are extremely correct in all that concerns their conduct with the Rus-*

sians ; sitting with their caps off, asking for what they want, and making themselves by no means unacceptable guests.

The whole of them are ingenious, cunning, industrious, and excellent mechanics, which is proved by the symmetry, neatness, and quantity of their nartes, clothes, tents, arms, and ornaments. They have no religion, but a sort of regard to some sorcerers or people held by them in veneration. They are allowed to retain five wives, whom they may put to death upon discovery of any criminal intercourse ; holding also the power of compelling them to such criminal intercourse,—an act by no means unfrequent, when the husband is in want of an heir or son.

Upon the whole, the Tchuktchi appear to be approaching to Russian subjection ; and I am confident they would never object to a traveller or travellers exploring their inhospitable country, provided they received a remuneration ; and nothing prevented my being able to accompany them, save their avarice and my poverty. I felt, however, happy in establishing the fact of being permitted to go on some terms, because it will enable the Russian government to take the first opportunity of exploring their country. Yet I would advise such as are employed to be particular in their conduct ; they will have to do with a people jealous and suspicious, but who, although cautious in giving their word, are truly faithful in keeping it. He who shall feel inclined to accompany such a savage race through their inhospitable and uninteresting country, must doubtless be prepared to undergo very great fatigues and privations ; he should be inured to cold, as he will doubtless have to walk the whole distance, but *on no day exceeding four or five miles.*

He should also be tall, stout, and strong, for such, and such only, the Tchuktchi both fear, obey, and respect.

The manner of dressing their food is by boiling, when wood can be procured, which, however, is not frequently the case during the winter season. They then generally consume frozen meat or fish, which, with them, as with the others in rein-deer countries, is considered a necessary and extravagant luxury; warm and raw marrow is also their greatest delicacy. The flavour of their meat is most exquisite, free from that soft and flabby taste common to rein-deer and veal, with a flavour somewhat between beef and mutton, more tender than the one, and less so than the other. They drink tea, and are exceedingly fond of sugar. Tobacco is their great commodity, which they eat, chew, smoke, and snuff at the same time. I have seen boys and girls of nine or ten years of age, put a large leaf of tobacco into their mouths, without permitting any saliva to escape; nor will they put aside the tobacco should meat be offered to them, but continue consuming both together. They are said, no doubt correctly, to drink only snow water during the winter; to melt which, when no wood is to be had, very disgusting and dirty means are resorted to. Nothing is so acceptable to a rein-deer as human urine, and I have seen them even run to get it as occasion offered.

In closing the account of this strange people, I may mention two remarkable circumstances: a kettle or cooking utensil is in their language called *cookie*, but whether the word proceeds, as I conjecture, from the remembrance of the name of Captain Cook, who first supplied them with that utensil, or from the English word denoting the use it is ap-

ied to, I admit to be a question. To these vessels, which are of iron, they are much attached, and the stronger and stouter they are, the better; nor will any consideration induce them to take or purchase a copper vessel, although lined with tin, as they consider it poisonous. Plain raw iron are preferred, and these they will fearlessly, and with impunity, handle in a temperature of forty degrees of frost by *eamur*. The other circumstance to which I allude, is the occasional migration of large armies of ice, either from, or to, this continent and America. Of the annual movements of these small but numerous animals in the peninsula of Kamtchatka, I have little doubt; and contrasting or weighing that knowledge, with the circumstance that most of the clothing of the Tchuktchi is embroidered with the skins of mice, I consider the assertion of their annual migration as perfectly warranted.

My return to the Kolyma occupied me only two days, partly from lightness of carriage, and partly from the hunger of the dogs, there being little or none of their common food offering for sale on the banks of the Aniuy. I was most happy to meet with Baron Wrangel, who had returned from his expedition round Shelatskoi Noss. I received from him the following account. He was absent a month the whole, and followed the course laid down in the chart of reference at the end of the second voyage, which proves that the information I had obtained from the Tchuktchi was perfectly correct; and as the contents of my memorial to the Royal Society, which the baron had previously read. As to the east of Shelatskoi Noss, which is at $70^{\circ} 5'$ latitude; the longitude about 175° east of Baranov Kamene; which is exactly between Cape North and Baranov Kamene.

Tchaon Bay, with its two islands, and the dwellings between the island of Illere, or Sabedei of Shalaouroff, and the main-land, were also recognised by the baron. They were doubtless inhabited, as the expedition was in their tracks for three days. The run of the coast from the Kolyma to Shelatskoi Noss, is about E.N.E. and that from the Noss to the east, very easterly from Cape Kuzmin.

No doubt whatever can now be entertained of Deshneff having gone round the N.E. cape, no other impediment but ice appearing to exist ; as little, or less, need there be, of Shalaouroff's having reached it, he having actually described the formation of Tchaon Bay, although he placed it too far to the northward, as he did also Shelatskoi Noss ; while in fact the theory of Mr Coxe respecting this country is perfectly correct. Baron Wrangel and Cook may be said to have seen across the intervening space which has not actually been traversed by Europeans. I will, however, leave this scientific argument to the merits of the appendix, and change it for an introduction of some extracts from Baron Wrangel's letter to me, after his first journey across the Frozen Sea, and the track of which will appear upon the chart annexed. The baron observes, that, although I should otherwise hear all particulars about the expedition to the north from the Kolyma, still he feels disposed to give me some information on the subject. " I have," he continues, " used your suggestion with some alterations, and what has been done during the last voyage, is certainly done by this invention of yours ; used in such a manner as I used it, it proved to be très-ricquant. It was indeed a very happy accident, that the white bears, having *circumnavigated* the ice mountain, on *the top of which* I had made the storehouse, several

times, did not attempt to ascend it, as they, the bears, would have had no difficulty in destroying such fortifications, although I before thought to the contrary, especially as the dog-master said, that none of the dreadful white-bear regiment had either force or ability to rob us either of our own or the dogs' provisions, out of its strong concealment. Nevertheless I have seen, during the late voyage, such tricks of these white bears, that *the precautions I took* for the preservation of our provisions, I call a *happy accident*. Should I make the same voyage the next spring, I will take no *fire-wood* at all, but take wood prepared to build a stronger cellar within the ice, and dry moss, with fish oil, shall serve to boil the tea-kettle; a circumstance which will much relieve the dogs as to the point of weight, as well as serve us upon our return in respect of fire-wood."

Although I cannot but do justice to the baron's general and scientific knowledge, I confess I do not know precisely what he means by the term *happy accident*. The idea I suggested was to prevent an accident, and I suppose, therefore, the baron meant that it was a happy circumstance that the bears did not ascend the mountain, as in that case the precautions taken would have been useless. To enable the baron to go farther, with more ease to the dogs, two days' provisions for the homeward voyage were to be buried at every third day's outward voyage; the plan of securing such provisions of course, must be left entirely to the ingenuity of the party travelling, as well as to the means presented by the situation of the ice. But I think, with half-a-dozen people, I could secure provisions in such a manner as, not indeed to elude the sagacity of the bears, *but to prove the inefficacy of their*

strength when put in competition with the sagacity of man.

The baron next proceeds to point out the rather dangerous situation in which he was latterly placed, the last nine days of his journey being over a field of ice, in general but half a foot thick, although only in the latter part of April. During many parts of this journey, they came to open channels, five and seven feet wide, and each night brought with it strong north and north-west winds, which made the ice tremble beneath their cold pillows. At times, sounds like the roar of thunder would assail their ears, yet prove only to be the shattering of ice-hills, and the severing of the fields of ice. At one period, the baron and his friend, Mr Matiushkin, were gone in quest of a white bear to feed the dogs which had suffered much, when the ice broke under their feet with such a noise that Mr M. actually called out, "What will now become of us?" when the baron was so convinced of its being thunder, that he looked to the south, in expectation of seeing the lightning that must precede the second peal. The Cossacks, however, pointed out that the ice was breaking, which induced him to make the best of his way towards the close ice, then distant three or four miles. The dog-master and Cossacks expressed much regret at continuing the direct course, but, *fortunately*, they arrived safe, and reached the Kolyma in the beginning of May. I have used the term *fortunate*, as the subsequent spring and summer, or rather the continuation of winter, proved the most extraordinary ever known at the Kolyma; a severity attending them which might have permitted the commander of the expedition to risk much more in point of time than Baron Wrangel then thought

prudent. In one of the following seasons he was actually cast away so early as the month of March; which period, so far from being entertained or considered as a dangerous one, is usually that allotted to the commencement of a journey over the ice. In these high latitudes there is no actual criterion how to judge of the seasons.

The ice in the year 1821 did not break up until the 29th May O. S. The coldness of the summer was most extraordinary. On the 20th June, 2d July, and 3d August, there was much snow, *and one degree and a half of cold of REAUMUR*, without intermission, accompanied with constant N. W. gales. The month of May, although so cold, was the only agreeable weather during spring or summer; and the appearances of a bad season were very distressing. Neither the small rivers running into the Kolyma, nor the Kolyma itself, had, on the 15th of August, produced any fish, in consequence of the height of the waters. The only hope of the poor inhabitants, and of the expedition, rested on the interval betwixt the time of the river freezing and the month of December. On the 13th of August, the baron received information that the rein-deer chase on the Aniuy and Omelon had entirely failed, and that the Yukagiri were in a state of starvation. The 22d of August it snowed hard, and continued to snow till the 25th, when the lakes were all frozen over. On the 30th August Baron Wrangel was frozen up in a boat in the Kolyma, and hoary winter was dated from that period, as the river thence became passable for dogs and nartes. I shall here conclude my observations respecting this indefatigable young officer, by saying, *that for a combination of personal exertion and sacrifice, with the most undoubted scientific know-*

258 BARON WRANGEL'S EXPEDITION.

ledge, especially that of practical and theoretical astronomy, so necessary to conduct an expedition of this nature, I believe Baron Wrangel has no equal in the Russian navy. Nor will the opinion I have thus candidly given, in the first edition of my work, have the less weight with the thinking part of the community, when I acquaint them with the hazardous, nay perilous, but fortunate result of his last enterprising attempt, in which he, by a **HAPPY ACCIDENT**, was enabled to trace the Asiatic coast from Shelatskoi Noss to Serdze Kamene. The account of it will also be found in the Appendix.

CHAPTER VIII.

Departure from the Kolyma—Lapteff—Sredne Kolymsk—Kosatchey Ostrog—Verchne Kolymsk—The Zyzanka—Hokusolbetie and Bochiera—Boulouktak—Kourouack—Terachtack, &c.—Kourdak—Andigezan—Intack—Omekon—Nera—Indigirka, Rivers—The Tongousi Tribe—The Koudousou and Kounounaksala Rivers—The Okota—Okotsk.

WINTER was still raging with all its severity, when I prepared to quit the Kolyma. I could now, indeed, have no inducement to remain longer; my desire of penetrating through the country of the Tchuktchi no longer existed, but for the purpose of getting across to the opposite continent: and as I had failed, through the avarice of the savages, I determined to proceed to Okotsk, by the direct route, in spite of the remonstrances of the commissary, Cossacks, and Yakuti, who were ordered to attend me wherever I might go. The proper mode was by that I had previously come; but I wished of course to avoid near two thousand miles of such sameness, independent of my desire to reach Okotsk by the first of June. The Yakuti were so fearful of a route of the kind, that they even attempted to bribe me with presents to take another; but I was resolutely fixed upon the new route, and the result will show that I had only *myself to thank for the difficulties I encountered.*

and the narrow escapes I had so often for my life. To me, however, the hardest day's work was followed by the happiest evening, and the soundest sleep as I lay down on my snow pillow.

With grateful recollections of the hospitality and kind treatment I had experienced from every individual in the commissariat of Kolyma, I departed on the 27th of March in a narte royal, that is, one drawn by thirteen dogs, who took me eighty miles in one day; a prodigious day's journey, as it is considered in this part of the world, for the same dogs to perform. The 1st of May is, however, the period usually calculated on for the Omekon and other rivers breaking up, and I was a long distance from them; I was therefore compelled to hasten, to prevent a detention on the banks of them for six weeks or more. I could not but feel melancholy and sick at heart at parting as it were from a brother, in the person of Baron Wrangel. However, I pushed forward, and in three days reached Lapteff, one hundred and eighty miles from Nishney Kolymsk. The weather was most variable; in the early part of the morning we had 15° of frost, at noon as many of heat, from the reflection of the sun, and in the evening again 10° of frost. The mornings, before the sun appeared, were the coldest I ever endured, being really more severe than 40° of frost, owing to the heavy fogs which prevail in the latter end of March and beginning of April, and which strike an indescribable cold to the whole frame.

At Lapteff I met my old friend, the venerable prince of ninety-one. He had just returned from a visit to another prince, twenty miles distant, and insisted upon accompanying me the following morning; and such was his health and capability

to bear the piercing morning air, that while I was compelled to walk, as it seemed, to save my life, the old Yakut prince was quietly walking his horse to a sort of humming tune, which may be said to constitute a Yakut's song. There is no regular meaning in what they sing, being made up of any accidental allusions to the weather, trees, rivers, fatigues, horses, and the like, according to the immediate impulse of the moment.

From Lapteff I continued my route to Sredne Kolymsk, where I arrived on the fifth day at noon, much fatigued. I was exceedingly gratified with the repetition of old kindnesses and remembrances on the part of the inhabitants as I came along. They were cheerfully looking forward to an early summer, in which, alas ! they were bitterly disappointed. They were constantly presenting me with the first partridges and hares, which the approaching sun had sent in advance ; and even other early delicacies were given me in aid of the long journey I had before me.

The day that I reached Sredne Kolymsk I started a large grey wolf, and, being on horseback, was nearly thrown into the snow, as I had repeatedly been before. A burnt child is said to dread the fire, so a bit horse dreads a wolf ; the one I rode had so suffered. The only pleasure I experienced in Sredne Kolymsk was being housed in the comfortable abode of my old attendant, Peter Treche-koff, who was, in the absence of the commissary, chief of the department. I renewed the protestations of my fidelity and good-will towards a person I felt so highly indebted to ; and the certificate which I gave him of his extraordinary good conduct and kindness towards me, was, I am happy to say, the occasion of his being made a sergeant ;

beyond which, though he does not at present aspire, he will necessarily attain, as any under officer, whose conduct is good in that rank for a certain number of years, may demand the rank of an officer as a recompense. Surely this is a regulation well worthy of imitation in every country. What can be a greater incentive to good conduct, in any department under a government, than the fact of knowing that both a pecuniary and honorary reward attends the exertions of every individual? *Patience, Cossack, and you will be the Hetman!* is an encouraging Russian proverb.

I remained with my old friend a couple of days, awaiting a fresh Cossack, who was ordered to attend me to Okotsk. I felt most happy in preparing once more to tread a new road, and throw aside the difficulties which were for ever thundered in my ears. The poor young love-sick Cossack destined to attend me I could not but pity; he had a positive fear of going to Okotsk, so far from his wife, a pretty young girl, and then again to Yakutsk, where he would be detained five or six months, and thus be kept from his home at least a twelvemonth. These, indeed, were no small complaints. Leaving his home at that time had this additional consequence, that his presence was then most wanted to assist in fishing. The case was not, however, so bad as my readers may imagine; for when a Cossack is absent from his home upon the public service, his family still receive the proportion of fish which would have accrued to him had he been present; on such friendly terms do the people live in this part of the world. And upon my promising him that he should return direct to the Kolyma, he was reconciled, and we prepared to depart. Nor was my promise rendered of

ious effect by Vladimir Ushinsky, the chief of Okotak ; on the contrary, more than I had promised, unminister like, was done for the benefit of this otherwise almost useless Cossack, whose sickness at heart had several times nearly proved his and my ruin.

Our first day's journey was to a place called Kasachey, sixty miles, by a good path, on the Kolyma, abounding with summer establishments for fishing, else a dreary low waste, producing nothing but stunted wood. I felt really happy in the evening in the comfortable residence of a rich Yakut, who had married a Cossack's daughter. She was dreadfully afflicted with the hiccoughs, and I again tried my *medical skill*, by giving her a slap on the back. It had no effect ; and her husband then told me that she had the dieavel ootra, or the devil in her belly. It was apparent there was something in the case ; but whether a devil or a child I do not pretend to know. Whatever it was, it effectually deprived me of sleep. The malady continued the whole night ; though it seems the natives afflicted with it can, during the fit, sleep soundly ; but on the instance I have this day seen of its effects upon a lovely young woman I will not dwell, for it is too melancholy.

The following day, over numerous large lakes and a rich pasture country, I resumed my journey. Many Yakuti live in the environs, employed in fishing, and in the chase of bears, rein-deer, sables, and squirrels ; the latter are here innumerable. In the afternoon we were thrown into a snow pit ; the fall and plunging of our horses threw us off our saddles ; and the horses, finding themselves disengaged from their burdens, scrambled up the pit, and left us and our baggage to shift as we

could. After ten miles walk we reached a yourte; whose owner saddled his own beasts, and sent them for the baggage; while our own Yakuti went in search of their own horses. I was, meantime, made perfectly comfortable, and amused myself with the tricks of a shamane, or sorcerer, some of which were indeed strange enough. He wore a sort of short surtout, covered over with a variety of small pieces of iron, about the size and shape of the pointed blade of a penknife; his boots were embroidered, as were also his cap and gloves. The performance of course began by smoking a pipe; then taking his tambourine and bolouyak, or tambourine-stick, he seated himself cross-legged near the person to be exorcised, and began to sing a doleful ditty, accompanied by more doleful music; the import of the song I could not gather. After this introduction he began to jump, hop, and fling about, roaring, screaming, and making the most hideous distortions of face and body, so that I actually believed him to be mad. I never felt more pain for any one than I felt for this shamane, certainly much more than for the sick person on whose behalf his incantations were made. After this violent exercise he drew his knife, and, to all appearance, plunged it into his belly. I really felt alarmed, believing that he had actually committed suicide; he, however, drew back the knife in my sence, without any effusion of blood, and, indeed without any actual incision being made. He formally announced that the evil spirit would triumph, provided the customary sacrifice was of a fat mare. The party was then dismissed an invitation to come to the next day's feast, the mare was to be cooked. In all this conjuring there was indeed no slight of hand, but n

slight of the belly; and the case is, that the shamanes are, from habit, accustomed to draw in that part of the belly which the knife is supposed to penetrate, to a distance of five or six inches; they never, however, use other than their own knives, from fear, I presume, of their being too long. The power of these impostors over the ignorant multitude is very great, but they do not wander far from their principality, nor are they numerous. Their pretensions extend to the cure of diseases, changing the weather, affording successful chase, and finding stolen things.

. In the early part of the evening, a ludicrous circumstance occurred betwixt the above shamane and myself. I had invited him to take tea with me; and when he came, I put a little tobacco in the palm of my Cossack's hand to give to the shamane. The Cossack, however, carelessly or ignorantly, put it into the tea-kettle, supposing it to be tea, and the mistake was not known until the kettle was brought boiling hot, and, pouring it out, we discovered by the flavour that it was tobacco-water. The shamane was highly indignant and enraged, the people of the house still more so, and the sick person must die, unless a second sacrifice was made. This was extremely anxious to avoid; and the only remedy I had was to part with half of the spirits I possessed, which, although a loss of consequence to me, I readily endured, to prevent the impostor from procuring a second gormandizing feast at the expense, if not the ruin, of the poor people. As it was, the shamane got roaring drunk on the result of his mistake, and so I left him.

The horses did not return with the baggage till midnight, when one bag of my clothing was missing, as well as my pipe: the last, a serious

loss, as it was my friend, companion, comforter, and almost sole enjoyment. I could have mourned for it, like Sancho after his Dapple; but it was fruitless, and I accordingly wished the possessor the enjoyment of it for my sake. Next day, over a stubby heath, affording a fine view of the mountains to the south-east, we gained sixty miles. I observed on the lakes numerous parties fishing through the ice, who gave me a supply whenever I desired it. On the fourth day I reached Verchne Kolymsk late in the evening, suffering much from the loss of skin, which left my nose and lips bare. The whole distance was two hundred and fifty miles.

Verchne Kolymsk is considered a *large* village, having fifteen dwellings, with near two hundred inhabitants. It stands in a most bleak and exposed situation, on the right bank of the Yasashna, at about a mile from its junction with the Kolyma. It was at this place that the vessels for Captain Billings's expedition were built, the country to the southward abounding in fine timber; and yet it is considered, although only so far north as the latitude $60^{\circ} 30'$, to be one of the coldest places in Eastern Siberia, the thermometer falling as low as 43° of Reaumur. Verchne Kolymsk has nothing remarkable to boast of but a large cross erected by Billings, on which are cut out the names of the European people who composed his expedition—an expedition which performed nothing. I remained one day to change my Cossack, preferring rather to beat up for a volunteer than to take on the old one, but to no purpose. Whether from fear of me or the journey it is unnecessary to inquire, but the old one must go!

My route from the Kolyma was towards the

Koumoul Bolouktak, a lake so named from a fish which inhabits it. The first part of the journey was attended with a little snow, but I felt consoled by the number of pigeons and hares which increased our sea stores, for thus I may name them, since I had really more to do with water than with land. At length I reached the Zyzanka, and, at twenty miles farther, the last habitation of the Kolyma district. We halted on a rocky hill, and encountered some difficulty in bringing fire-wood for the night, from a distance of at least half a mile. The second day, with infinite labour, through deep and soft snow, we reached twenty miles farther, encamping at the foot of the mountains which I had before seen stretching from the south-east. The guide who, though a Yakut, spoke Russian well, proved a choice and jovial fellow ; while the Cossack, a dull and melancholy milk-sop, was browning every possible obstacle in my way, to induce me to take the other road, or return. This, appears from letters which I have since received, he was directed to do by a person holding an official situation ; an act which, if known at the government of Yakutsk, Irkutsk, or St Petersburg, would, I am sure, have been visited with severe punishment ; but commissaries in such places are usually both mean and worthless. Still along the banks of the Zyzanka we continued to the west, picking up at intervals partridges and which had fallen in the traps. The scenery is somewhat interesting, and the hills composed of slate.

The road I was now upon was that formerly the post from Yakutsk to the river Koumat is, by way of Okotsk, but discontinued in consequence of the difficulties which constantly

The reflection of the sun at first produced effects upon my eyes; but I met it with grace, as neither sun nor snow would give me. From the Zyzanka I entered a narrow valley betwixt which runs from east to west, the latter was my course. The southern ridge was bold and perpendicular, and consequently rocky. The northern branch, which was the south, rose into gentle and luxuriant expanse, affording a fine contrast to the desolation left. Our party continued to feed upon partridges and hares from the charity traps. The natives, beguiled by touching a small wooden figure representing a log or tree, which falls direct on the animal and causes instant death. These traps are numerous, that I have in a day got three brace of hares and partridges. They are the wandering Yakuti and Tongousi, of the world, with an understanding only the

I was gaining ground from habit and strength of constitution. The guide was blind, while the Cossack was afflicted with re diarrhoea arising from want of food, for me had failed us, and he was too much a to eat horse-meat. It was, however, his ult, for he always ate voraciously whenever asion offered. With these two invalids I ed the journey, prescribing for them, but t effect, and at noon was obliged again to ; they were unable to proceed. The heat sun by Fahrenheit was 80°, and the route d, ascending a perilous and laborious chain ated hills. The work which now devolved ne was so much more than ordinary, that I ot but feel it severely ; it was, however, my o assist those whom I had demanded to as-, and I could make no complaint.

snow was deep but soft ; the noon-day heat ; the surface, and the night's frost again g it, just sufficiently to bear a man with hoës ; so that, in addition to our other diffi- the horses began to fail. We nevertheless ed our route, gaining the Zyzanka, and lat- ossing the mountains which confine it. We itered the most dismal, dreary, and inhosp- valley I have ever seen ; not a blade of or moss, not a shrub, tree, nor even a mor- rift-wood, to be seen, but one tremendous ountain valley. We encamped on the of the stream, faring upon our frozen horse- id a little biscuit ; our stock of spirits was umed, and I longed to reach some habita- My poor Cossack now grew worse, having ree days without food, and so weak, that necessary to lash him to the horse. The

guide was almost blind, being unable even to bring the horses in from the pasture. I was thus compelled to perform the functions of ostler, wood-cutter, guide, doctor, cook, and traveller; regretting only the necessity that compelled me so to act, for otherwise I took so little heed of it, that I slept the sounder.

Leaving this desolate valley, our route lay over a few rugged hills, by a path which seemed to point itself out as the proper route. We soon entered upon the river Koulgall, and the romantic valley of Boulouktak, named from the lake, stream, and fish produced from it, the second of which enters the narrow defile in the elevated southern ranges. The prospect is most beautiful; tolerable sized wood occupies the fore-ground, with a small hill, which I ascended, to obtain a better view of the magnificent panorama. To describe it would require a far more able pen or pencil than mine. The southern range appeared much indented, and seemed to cast a shade over their otherwise milky appearance. Two yourtes on the borders of a lake were on the left, while, from the right, the river winded over the plain. The whole view occupied from south-west to east, and from west to north-east, so that the valley runs from east-north-east to west-south-west. The breadth of it is about twenty miles. I remained at a miserable yourte five days, to see what I could do in restoring the Cossack, but in vain, and departed with a Yakut, six feet high, and stout in proportion, the largest I have ever seen. He was, however, a mere brute, not knowing a word of the Russian language, a great glutton, stupid, obstinate, and immovably lazy.

It was with great reluctance I commenced the

road with him, but there was no alternative, he being the only person who knew any thing of the route towards the Omekon. At about fifteen miles, having passed three small lakes, we reached the base of the southern range of hills. We ascended them against wind and snow, and night closed in upon us as we had reached thirty miles, in the bosom of the mountains. It was impossible to keep in a fire from the driving of the snow; I therefore managed as well as I could, while my half-savage gigantic companion comforted himself with at least twenty pounds of frozen horse-meat. Next day I crossed with my companion the Kourouack mountains, at the base of which runs the little rapid river of this name, which we passed with difficulty, as it was giving way very fast to the warmth of the sun, the thermometer standing at 27° of Reaumur. The mountains now exhibit a constant and uniform succession of equilateral triangles, or pyramids, of stone slate, with layers of the same yellow earth, called stone-butter, which I have before noticed as being eaten by the aborigines. The next river was the Terachtack and Outachan-Taroun Oract, or large icy river, as it signifies in the Yakut dialect. Our route proved difficult, now over overflowed meadows and large rivers, or elevated mountains, well-wooded with larches, alder, and some pine. On the fifth day we ascended a stupendous path, which overlooks not only the surrounding country but also the other mountains; it is almost a bare rock, and was so slippery that the horses got very severe falls in the ascent, rolling back in one moment as much as it had taken ten minutes labour to achieve. I almost despaired of gaining the summit, but we at length succeeded, and then *the horses actually slid down the opposite*.

precipice of one hundred feet high, the rock being covered with frozen snow. For myself I considered it, as it really was, an ice mountain, and, desiring the guide to follow, passed down without any accident. I was now indeed in a desperate dilemma ; but Providence, which ever watches the wants of all creatures, sent to my assistance the sick Cossack, who, having got better, and being without baggage, had followed our track with a couple of horses. He came in time also to tell us that we had mistaken the route. His duty pointing out the necessity of seeing me safe to Okotsk, I did not feel so thankful as I else should, because I suspected that most of his illness was pretended, and that conscience had told him he was acting wrong, or he might not have returned, having already received permission from me to proceed to the Kolyma.

We passed the night in a dreary situation, without any fire. My tea and bread were both consumed ; nothing in short remained but horse-flesh, which I found very good. The Cossack had brought a few birds, but as I knew that such dainties were all he could, or would, eat, of course I gave them up to him. Next day we considered how to ascend the mountain ; the snow was solid and slippery, and there appeared no other mode than the one which we adopted—creeping up the side, and chopping the surface with a hatchet, at frequent intervals, to obtain some sort of footing. In this manner I and the Cossack ascended, and making all the leather thongs fast together, we hauled up the baggage and let it down on the opposite side ; thus placing ourselves between it and *the horses*. To get up the latter required more *management* ; for, accustomed as the horses are to

the most laborious and dangerous journeys, and with all their sagacity and tameness, I found they could not ascend above half the mountain, the fatigue was too great; in short they were compelled to give it up, and recoil once more to the base in a state of perfect agony. Thus passed the day! Our situation now seemed desperate; the horses had received no food for two days, with more than ordinary hard work, during which we had enjoyed no fire; yet still "neboice avoce lebo" (fear not—perhaps) were the rallying words, and these alone served us for supper. Our monster of a guide was quite insensible to our situation, and sat grumbling that he had not more than twenty pounds of meat a-day, with such hard work.

This night was passed even more miserably than the last, as we had not even the benefit of our bedding or clothing, both of which had been hurled down the opposite valley, without respect to whom they belonged. We rose, the third morning, prepared for hard work; and our first attempt was to haul the horses up the precipice. We in part succeeded, as the strongest were actually received, and cast adrift on the opposite side to feed. This occupied us all day, and the third night was passed with the cheering hopes of resuming our journey the following day; but these were frustrated, as it was not until late in the evening that we succeeded in passing all the horses we designed to keep; one we were obliged to kill and carry with us as food. Our bully-headed Yakut too became wonderfully alert on this occasion, knowing he should receive an extra allowance of meat, were it for no other reason than to lighten the other brutes. I, however, determined to make some reserve, and accordingly taking a quantity of the slaughtered animal, suffi-

cient to serve the Yakut on his return, I buried it in the snow, which I thought would continue unmelted for ten or twelve days, and marked the place with a cross. This precaution I considered was more than ordinarily necessary with my gigantic companion, who had infinitely less concern towards the prevention of future starvation, than to the support of present gluttony.

The only mode of passing the last three horses was by making a regular staircase up the hill, by means of axes, and strewing it with earth; myself and the Cossack, who were on the hill, holding a rope attached to the horse's head, while the guide behind, whose task it was to flog the beast, had no sinecure, as, from his immoderate size, he was almost himself incapable of moving. The result of the last five days was that we had lost five days' travelling, five days of the best season, and five days which were worth fifty of those which followed; the fault was not mine! The weather was still very cold, and I felt some relief in getting close to a cheerful fire. Next day I directed my course by a compass, for the guide knew nothing, about west-south-west, intending, if possible, to gain the river Indigirka. We crossed many hills, deep in snow, and left two horses dead, a circumstance which seemed to please the guide, whom I was consequently obliged to declare under martial law; being confident that he cared not if I and the Cossack perished. I was now compelled to put the little baggage we had left upon the spare horses, and we all continued the journey on foot, encamping for the night on the banks of the Kourdak, which we traversed the next day with tolerable ease, being clear of snow, with a fresh breeze right-aft. In *the evening* it turned to rain, the first real shower

since September, as we halted on the banks of the same stream, having walked about fifteen miles. We passed the night in a sort of growling way, and renewed our journey towards the Terachtack over a pleasant, pasture, and well-wooded country.

All the rivers which I had lately passed run into the Indigirka, and, although small, are rapid streams. My guide was now so negligent and useless, that I was compelled to desire the Cossack to flog him with his own whip, in a manner which, in England, would justly have been considered severe; but I am satisfied the necessity and danger of our situation justified the measure, for the fellow was really deceiving us, to say nothing of the risk, which was very great, unprovided as we were with nets or fire-arms. Leaving another horse to abide his fate, we continued on, dividing the extra baggage between us. We crossed the Ambardach and Chousgindrach, adding another walk to the fatigue we had undergone; and, being still eighty miles from the nearest habitation, we rested at a rich pasture two days for the sake of the horses, and on the third reached the rivers Andigizan, Intach, and Omekon. The country had now become gradually very agreeable and open, and the weather was very fine. Great quantities of game, as geese, ducks, partridges, and woodcocks, hovered over our heads, and we saw numerous traces of quadrupeds; as bears, wolves, foxes, rein-deer, and hares, with sometimes that of an elk. The last day of this journey, through an extra effort, induced by the hope of success, we reached the first habitation of the Omekon district; walking and swimming that day near thirty miles: I say swimming, for we were frequently obliged to wade across the rivers, and to swim over many yards of rapid

stream, which I accomplished for myself by means of a rope fastened to a horse's neck. I reached, all well, the Bolouvanach, and then the more considerable Nera, all rivers which unite with the Indigirka. I was received at a yourte, the most pleasant and hospitable, as I then thought, I had ever seen, where I procured two fresh horses to carry the baggage, and continued the route on foot, leading all the other horses, now reduced to five.

My overgrown guide was of course discharged. I could not even remain a moment to refresh, as the rivers were breaking up, and threatening to insulate me for some months from the rest of the world. The Omekon river was still distant one hundred and fifty miles, and I had scanty means of reaching it under four days, even supposing assistance given; but I pressed on, gratified to catch now and then in the distant horizon the sight of smoke, which I had not seen during the last journey of more than three hundred miles. Not one individual, stationary or wandering, had I met from the lake Boulouktak; but now we were, as may be termed, risen from the dead, renewed with fresh courage, and my Cossack particularly inspired with a regale of beef which had been given him at the first yourte. For myself, I preferred to partake of the old horse-meat I had still left; having a mind to shame the Cossack, and show him that he ought to eat any thing when necessity dictated. I had passed twelve days without any other food than the horse-meat we had brought, generally eaten in a raw state, and a small part of the animal we had killed; yet I was never in better health. In this state I reached the hospitable abode of the Prince Nicolai. Our journey had lain on the rivers Nera and Indigirka, the country sterile and dreary,

and as desolate as Zashiversk, lower down the latter river. The second day I again halted at the residence of a Yakut knez (prince), who presented me with half a rein-deer, and treated me with milk and meat, making me, as I thought, the happiest of men : which is the effect produced by present comforts and enjoyments upon past hardships.

Independent of the provisions given to me, I was obliged to receive two red foxes, as a tribute. They were presented to me by the hands of a tolerably good-looking Yakut girl, whose father, with two other princes, formed a part of my train to the residence of the prince of the Omekon, where we arrived the following day ; and I cannot help asserting, that I never saw a race of people more worthy of this honorary distinction ; *they* certainly commanded in their own breasts humanity, justice, and common sense.

The latter part of the journey changed for the better ; from rugged and sterile hills and marshy swamps, to beautiful rising and well-wooded eminences and fertile meadow lands ; from perfect desolation to comparative populousness. The first sight of so many smoking chimneys gladdened my heart in an unusual degree. I felt the value of life, never enjoyed it more than in the hospitable residence of Peter Gotossop, the Yakut prince of the Omekon. He had come thirty miles, in consequence of an express, to meet me. I need not say much I enjoyed a bed of rein-deer skins in his house, after lodging fifteen days, without intermission in the snow ; at times actually immersed in it, which proceeded either from the melting of the snow, the fall of the dew, or the warmth of our bodies upon a half-frozen surface of snow.

The valley of Omekon is indeed a romantic and

fertile spot. About five hundred individuals are reckoned within its principality, who are scattered about, wandering with the numerous droves of cattle, as the season and height of the river will permit or compel. The woods are very fine and large, consisting of birch, pine, larch, and cedar, the last producing a highly flavoured, though small, nut, which is exported to Okotsk and Kamtchatka.

The quantity of cattle in the valley is prodigious, no less than three thousand mares, and near two thousand cows, the property of the few rich Yakuti. The consumption of them is, however, not small, especially of horses, owing to the great demand made by the government, in forced levies, for Okotsk and the more northern districts. But so fond are the Yakuti of their horses, that, to avoid selling them, and sending them upon such a service, they drive a couple of young bullocks, as an exchange for a horse, to the first place, or will present another person with a young bullock for each horse that is supplied him to carry on the extra service. The duty thus performed by them is undertaken purely for gluttony. The substitute instantly makes a feast of the young bullock, and trusts to the strength of his horse to make good the duty imposed upon it; yet, strange to say, it is seldom that a respectable Yakut will either ride himself, or suffer others to ride, much less will he load, a good horse; indeed, they are kept rather for show, or for breed, than for use; thus the duty falls upon the poor ones. In the event of a horse falling on the road, the Yakut is of course obliged to buy or get another as he can. Sometimes he will exchange in time, by giving three for two, and five for two, according to the state they are in: generally, however, he will kill them, and employ other

people to perform the latter part of the journey, giving or promising a dead horse or two in payment, and himself returning on foot.

I remained three days at the Omekon, and was again obliged to leave my Cossack, from ill health and fatigue. Having procured in his stead a young lad, born in the valley of Omekon, with him, and four of the native princes in my train, I departed along the banks of the river, running along one of the most picturesque and finest valleys in the universe, yielding the best grass in the province, and abounding with animals of the chase. Having reached thirty miles, we put up at the yourte of a wealthy knez. In the passage of the river each horse was attended by four men, owing to the velocity of the stream; the men resisting it by means of stout poles thrust into the bed of the river on their leeward side. The passage was certainly dangerous, but necessary to be accomplished without delay, before the melting of the snow on the lofty and magnificent mountains all around rendered the river terrific and impassable. The Omekon uniting with the Indigirka not far from hence, constitutes the latter for a season a first-rate river in Siberia. Already the meadow lands on each side of the river represent innumerable lakes, which are swum over by the horses with much difficulty. At eighty miles we exchanged horses; here I had a difference with the Cossack and guide, as to which horse I should ride, both insisting on the one proposed to me being the most proper. As I did not like his appearance, I said I was not accustomed to take the best in their estimation, nor even in my own; therefore I would be content with that which was already saddled for the guide. The latter said it was a vicious one, that it stumbled,

startled, and, indeed, had all sorts of defects. I persisted, however; observing to the guide that I was accustomed to those matters, and therefore preferred giving him the best horse. My reason for persisting in this paradoxical argument is, that I know few people will ever recommend that which they consider as the best horse; they will rather retain it for themselves: certainly I have never been deceived when riding a horse which was intended for guide or Cossack.

Recourse was at length had to frighten me out of my determination to attempt the journey to Okotsk at such a season of the year. The princes proposed that I should remain with them three or four weeks, when the rivers would subside, and the journey would then be even agreeable. All, however, that they could get from me, was to go with horses one hundred miles farther, and then take rein-deer. Their excellent and clean *yourtes*, the hospitality of the people, the productions of the country, the quantity of partridges, ducks, geese, plovers, and fine beef, presented to me, the richness of the cream, and refreshing flavour of the wild berries; above all, the romantic scenery which abounds, and the happiness which reigns, in the valley of Omekon, might, indeed, have proved strong allurements with me to pass my life with them, but held not out sufficient charms to induce me to avoid a difficult journey. The weather was now very fine, but the nights and mornings were still cold. The princes continued to accompany me through their magnificent retirement, which is near five hundred miles from any other establishment, Okotsk and Boulouktak being the nearest. I had a long conversation with the prince about *yasack*, a tribute peculiar to Siberia. He said that

the quantity was nothing, but that the mode of collecting it was a serious evil. The tribute they would freely give to the Emperor, but it was what the commissaries took from them by force, and which they gave to avoid vexatious and litigious treatment, that was oppressive; and these commissaries have great power.

Whether yasack is or is not an impolitic tax, remains to be proved; and whether a direct tax upon certain articles consumed by the Yakuti, and all aborigines, would not yield a greater revenue, may be doubted: at all events, the present system is liable to the greatest injustice and robbery. I have no doubt that each commissary receives from the district he governs, more furs for himself than for the Emperor. The prince was not a little surprised when I told him that, comparatively, he paid little taxes, and that other countries paid more. Among many taxes, I told him that, in England, he could not shoot wild ducks without permission, and even if he did shoot them in his own garden, he must not take them up to eat. Finding him incredulous, I then told him that he could not have more than a certain number of windows to his house without paying a tax. These two samples sufficed to make him perfectly satisfied with his government, till I informed him, on the other hand, that no person in England could be compelled to carry government, or private goods, without being paid his own price. Every thing, however, which I told him to prove the evident superiority of England, as to the personal liberty of the subject, failed to weaken his natural preference of wandering over his native soil, to the visiting of strange lands. Thus we rode along the picturesque valley for twenty miles, when we crossed numerous lakes,

which, from their local situation, were not as yet melted. They are surrounded by opulent Yakuti establishments, during the summer season, for the fish which abounds in them.

We next crossed the mountains, and entered upon another fine pasture country, watered by the Torourack; and halted at the last yourte in the government of Yakutsk. It was a miserable place, although the kindness of its inhabitants procured me a quantity of game. In its vicinity I passed through a herd of rein-deer, attended by the wandering Tongousi I was in search of. Their chief was, however, forty miles distant, whither I repaired the next day, along a wide expanding valley, opening to the south-east, and reached at sunset the encampment of Prince Shoumieloff. Having previously sent a herald in advance, I was received by him, with his sword by his side, his medals suspended from the neck, and dressed in a rich suit of black velveteen, and a cocked hat. I could not help laughing at the grotesque appearance of the prince, while I pitied him, and despised the means which had been used to divest so ignorant a man of his property, by the lure of honours of this kind. I do not by these words mean to intimate that the necessity for such distinctions does not exist; but I do say, that the purposes for which they are conferred on an ignorant savage are of the most despicable nature. This man, Prince Shoumieloff, was formerly a rich Tongousian; now he is a poor one; he had as many thousands of rein-deer as he has now hundreds. But his free presents, added to extortions and exactions, to prevent the chance of forced, although useless services, have so reduced his property, that he is obliged to eat fish, which is considered by the rein-deer Tongousi as a hardship, and to send out his people to

maintain themselves in the woods with their bows and arrows. Powder is too dear, or not to be had, but by a present to the chief of more than its equivalent ; he having the power to deny it altogether. Shoumieloff now dreads going to Okotsk, even in search of moss for his rein-deer, preferring, as he says, to live a real Tongousian wanderer, than a servile tributary to chiefs, commissaries, and other officers, although he glories in paying what is just.

I found him an obliging sort of man, although too free a use of liquor had made him at times a quarrelsome one. We took a pipe and a glass of vodka together, and, as he spoke the Russian language, we descanted upon the means he had of accommodating me with rein-deer as far as Okotsk. He said, what was true, that he had only just left the vicinity of that place in search of northern pastures, and that although he might possibly be able to reach Okotsk, he would still lose the benefit of the pasturage ; as, by the time he could return, winter would have commenced. I felt the force of his reasoning, but the service was his in point of law, as the season for employing or calling out of horses had not yet commenced ; and therefore, over a fresh glass of vodka, which had been given to me, on the Omekon, by a retired Cossack, he consented to take me.

In the neighbourhood there are eighty-seven of his tribe under his command, over whom he holds considerable power, as I have frequently witnessed ; but they are in general a hard-working people. I was amused with their manner of catching rein-deer, as it reminded me of the hunting of wild bullocks I had seen in Mexico ; with this difference only, that there the man rides a horse fully trained, and here a rein-deer. They use a long line, which

is coiled up in their hands, as sailors handle a log line, and galloping past the intended victim, they with much dexterity throw the noose, at the end of the line, over the horns. In America it is more dangerous, and the horseman is sometimes obliged to seek safety in flight, unless he can run the bullock into a thick enclosure, where he becomes entangled by the length of the line.

Next day I paid the prince a formal visit at his principal tent. He received me again in his gala dress, presented me with tea, tobacco, and roasted rein-deer meat, and lastly, with the raw marrow of the fore legs; the last I esteemed most, and, when eaten in a frozen state, is, in my opinion, superior to any other luxury of the kind, except raw fish. He had purposely killed a rein-deer for me, and sent me half; I, of course, presented him with some tobacco and powder, and, upon the demand of his wife, with a bottle of spirits, in return for which she gave me two red foxes.

On the third day we departed with fifty head of rein-deer; his whole herd consisting of about two thousand: fifteen were put at my disposal, while the rest were retained for his own consumption and emergencies. The prince said, that, as none of his people knew the summer mountain route, he would accompany me. I took this as a good omen of his kindness to me, and his desire to forward me on my way; the result will, however, prove how far I was mistaken. At ten miles we halted in a pleasant valley in a violent snow storm. The Tongousi were not long before they pitched their tent: but I preferred the open pure air, with all the annoyance of the snow, to the harbour of such a close place, and with such a filthy set; I will, however, do the prince the justice to say,

that he begged I would take refuge in his tent, enlarging upon its comforts, &c. We continued our route thirty miles the next day ; the first half along the valley, and the other over the hills leading to the river Tourourack, which we had crossed before. The third day the laden rein-deer began to lag and droop ; the snow was very deep, and the nasten, or the melted and re-frozen snow, was not sufficient to bear the animals. A rein-deer cannot carry above one hundred pounds upon his back, but with that and good roads they may be able to go thirty or forty miles : otherwise six or seven miles a day, when heavily laden, is the average. We shot a few partridges, for the Tongousi in general have guns, and secured one wild rein-deer, which last was equally divided between his party and mine. The wild rein-deer are generally considered as of those who formerly belonged to them, but had strayed away. By some little trickery they are decoyed into their camps ; otherwise wild and tame rein-deer have a natural aversion to one another.

The fourth and fifth days we made but little progress, the weather was bad, and the rein-deer dropping off, for we had already lost four by fatigue. The prince grew angry, and threatened either to leave me or carry me back ; to which, as on the one hand I felt no way inclined to submit, I was careful, on the other, not to compel him by provoking or abusive conduct, well knowing the character of the Tongousi. We reached an elevated pass in the mountains, which leads to the vicinity of Idgiga, but were unable to cross it, owing to the state of the snow. The sixth day we renewed the attempt upon the passage, but were again compelled to give up, *three laden rein-deer being dead,*

and the rest so weak as to be unable to convey the carcasses or the baggage. The former was a sad loss to the poor man, but I could only pity him. We remained for three days to recruit the reindeer, and then determined again to make for the Omekon, and attempt the long passage with horses. The reasons which influenced us to turn back appeared to me sufficiently strong ; and as the prince complained that he had not force sufficient to take my baggage, I was obliged to destroy the greater part. The moment Mr Shoumieloff saw what I was about, he remonstrated upon the crime ; asking why I did not give the things to him, as he could take them away for himself, although he would not for me. I said, I would make him a present of nearly all the baggage I had, if he would show me the way to Okotsk by the 20th of May. He declined, and I persisted in burning my clothing and bedding, for I felt convinced he had been duping me, compelling me, as he thought, to forsake my baggage, that he might reap the benefit ; nor was the destruction of my wardrobe of little import, rigged out as I had been by Baron Wrangel and the generous inhabitants of the Kolyma. Finding I was not to be outwitted nor dissuaded, he brought forward the image of the virgin and the saint he was named after, saying that I must be a heretic, and no priest of any country—he spit, swore, stamped, and crossed himself like a madman. I merely laughed at him, and although I should have had a laborious task to retrace my steps alone to the Omekon, I was determined to run the risk, and complete the desolation by burning every thing I had which he would not carry, and which was not actually necessary to the season of the year. At length he told me it had been previously ar-

ranged that I should return to the Omekon ; and there in fact I re-arrived on the eighteenth day, re-crossing the Tourourack and Boulabot rivers with much difficulty. The country over which I had lately wandered was barren, but presented some fine scenery ; numerous lakes are seen, and the wood is thick and tall. It is a favourite resort of the Tongousi, where they get fine moss for the deer, good fishing, and plenty of squirrels and foxes ; the latter alone serving to pay the yasack, as well as to purchase the few articles of necessity and luxury which they require, at the annual fair, held at Okotsk, in the month of June or July, according to the season.

Upon leaving the Prince Shoumieloff, I purchased a fine rein-deer of him for the last of my tobacco which I had bought at the Omekon. The deer might weigh about one hundred and fifty pounds, which I thought a sufficient quantity of meat to enable me to reach Okotsk. The Tongousian again wished to steal a march upon me, insisting that he had not sold me the skin, but the meat. As I had no bed, I was not disposed to be so easily outwitted, and therefore replied, that I was not obliged to kill the rein-deer until I thought proper ; but that when I did he should have the skin, provided he would accompany me for that purpose. Poor Shoumieloff felt much annoyed at being thus matched, especially as the knife was ready to sacrifice the poor animal, from which I, however, designed to secure myself a bed.

Fresh horses having been procured for me, I left for ever the Omekon ; receiving from my old friend Gotosop a quarter of a young bullock, and a dead horse for the use of the Yakuti ; besides a pood and a half, or *sixty pounds*, of rye flour, and at

least ten poods, or four hundred pounds, of butter and sour milk. The first day we halted at ten miles, on the banks of the Koudouson, at present a large and rapid river full of floating ice, which rendered the passage of it on the following day highly dangerous, though we had a small canoe, which served to tow a horse over each time; as it was, the poor animals suffered much. On reaching the other side, my medical skill was called into requisition. I had got the credit of curing asthma, palsy, sore eyes, and the like, and as this was done gratis I got many patients. Had I possessed a medical book I might probably have done some good.

From the Koudouson the country was quite overflowed for twenty miles, exhibiting numerous habitations perfectly insulated; indeed, many of the people do ply about in canoes, keeping them for this case of emergency. My next route was on the right bank of the Kourounaksouta, which, like the other rivers in this valley, unites with the Omekon. In the evening I had prepared for my supper what is termed *salamatt*, a mixture which I found very palatable. It is rye flour boiled in butter, and reduced in thickness, when boiling, to a substance like burgoo, or hasty pudding, not unlike what I had eaten when going down the Volga. The two following days we got on very well, making near sixty miles over low marshy swamps; a brace of ducks were shot, and we passed the evening comfortably.

Having re-crossed the Koudouson, we reached the Konkuy, also uniting with the Omekon, where a chain of mountains commence, running to the south-east and south-west. Our horses began now to suffer from want of food, as the pastures are

better suited for rein-deer. There are hence, from the Konkuy, two roads to Okotsk, one by the west, the other by the east, bank of the Okota; the former requires seven, the latter ten days to reach, without casualties. The former is over a level but continual swamp, the latter over high and rugged stony mountains. I preferred the former, though with the chance of being detained from the rapidity of the river or the quantity of loose ice, being willing to assist the horses of the poor Yakuti, as the mountain route affords but bad pasture and a worse road.

We made thirty miles along a valley, bounded by high peaked mountains. In a romantic spot, and near a rapid of the Koudousou, which makes much noise, I observed a neat tomb, with a cross over it, to the memory of a Lamut, or Tongousian prince, who had died here a few years ago, while wandering with his rein-deer.

We were now much annoyed with a considerable fall of rain, and passed a bad night in consequence. Next day there was every appearance of the rain continuing, and I reduced the allowance of meat one-half, not knowing how long we might be detained. A hurricane coming on, we were obliged to halt, and were most unpleasantly off in our wet leather clothes. As soon as possible, however, we resumed our journey along an elevated valley, where the snow was soft and dangerously deep, presenting nothing for a fire or for the support of the horses, nor a shrub of any description to be seen. I have scarcely ever seen a place where the horses could not, by scraping with their feet, reach the earth in search of food; here, however, the thing was impossible from the depth of the snow; and indeed *the poor animals* seemed to

know it, as they would not waste their strength in the attempt. The Yakuti put on long faces at the obstructions we met with, never having witnessed such deep and difficult roads, for, in ordinary times, good pasturage is to be had in this part of the valley.

The horses having to contend with such difficulties, our journey was continued on foot. My snow-shoes I gave up to one of the guides, in consideration of his being very heavy, while, for myself, with a quick motion, my weight was not sufficient to permit my sinking in the snow;—in case I had, the guide with snow-shoes was near to render me assistance. We were now frequently compelled to wander about on the borders of precipices, directing our route by the shade or appearance of the snow; habit having accustomed me, as well as the people of the country, to a pretty accurate calculation whether or not the snow would bear me. I have even seen the horses refuse to proceed, their sagacity in that case being equal to man's; nor will the leading dog of a narte, if he is good, run the vehicle into a track where there is deep snow or water.

The third terrible day brought us to a solitary tree, from which many horsehair offerings were suspended. Having overcome this abominable route, no less than sixty miles, in the evening we reached a fertile spot, and halted on the banks of a lake, from which, it is said, the rivers Okota and Koudousou, running in counter directions, have their source; a circumstance which recalled to my recollection those words in an able work by Mr Barrow upon rivers, where it is said, that "*although it is not a physical impossibility that two rivers should flow in opposite, or indeed in any*

direction, out of the same lake, yet the contrary approaches so near to an axiom in geography, that no instance is perhaps known of such an occurrence ;" nor is it unworthy of remark, that, while I was writing this, I read in the Literary Gazette of a similar circumstance having been reported by the Esquimaux ; indeed, from charts which *I have since seen* of that part of the world, I have no doubt of the fact. Query, do not several rivers emanate from the Baikal and Caspian Seas, or *Lakes* ?

We had now only one day's meat left, but were fortunate in shooting a couple of partridges, which the guides brought me. We had still some rye flour and butter, and with that hoped to cross the river and reach our destination, without any subsequent difficulty. At four in the morning we had 3° of frost by Reaumur, and at noon 73° of heat of Fahrenheit. After forty miles of severe travelling, we at length reached the river which was to close this terrible journey, and which was full of shoals and rapids, and may be declared useless. The islands in it abound with birches, larches, and Alders, as also with the poplar, and a few pines. There is also an abundance of wild berries of a fine flavour ; and the pastures are exceedingly rich. The scenery was, in many places, highly beautiful ; and the river afforded a novel spectacle, being confined by the most beautiful natural quays of crystal ice, while the river actually roared from the velocity of its current.

As we continued our melancholy route, we fell in with two white bears bound to the north, but far, probably, on either side, kept us apart. Still along the Okota, we reached twenty-five miles, the horses enjoying very fine pastures, but our provisions entirely at an end. The rains had again

overtaken us, and were rapidly swelling the rivers. Of the last of the rein-deer, the flesh was so far gone that I could not eat it ; the Yakuti, however, are so fond of putrid meat, termed in England game, for indeed it was nothing else, that they finished it, regretting only that it was so little in quantity. The second day without food, and in a torrent of rain, we made near fifty miles, the horses swimming and wading through thirty or forty little rapid streams. These are formed by the rains, and the melting of the snow from the eastern range of elevated mountains ; they subside and dry up about the month of September. We lost one horse, which was carried by the stream into the Okota.

At length, by great labour, we reached the fording place at the Okota. It was, however, impossible to attempt it, the guides observing that the horses might pass the river, but not loaded. We therefore halted, and next morning found a place where there was a canoe on the opposite bank. Thereupon unloading the horses, we turned them into the river, and they all reached the opposite bank in safety. The question then was how to get the canoe over ; I was the only person who could swim, but the water was still so cold that I felt no preference to that mode. Necessity at last compelled me, and having procured a short stout piece of drift wood, which was very buoyant, I crossed at a narrow part of the stream, with a leather thong fast to my waist. The rapidity of the stream carried me down above a hundred yards, but the Yakuti, keeping, by a sort of run, in a parallel line, were ready to haul me back, if necessary. I, however, reached in safety ; and, instantly throwing off my clothes, took violent exercise. *The breadth of the swimming part might only have*

been fifteen or twenty yards, and across the strength of the stream possibly not more than four or five yards ; yet I barely accomplished it. The feat was thankfully acknowledged by the astonished Yakuti when I returned with an excellent canoe.

Lord Byron swam the Hellespont, and John Cochrane the Okota. Of the two feats, mine was surely the most difficult ; his lordship was neither fatigued, hungry, nor cold, nor compelled to his undertaking ; while I had each and all of those evils to contend with.

By perseverance we reached twenty miles farther, halting at one of the fishermen's summer villages. I broke open all the cellars in search of fish, but was not so fortunate as to find any. The evening proving fine, we aired and dried our clothes in lieu of supper, and next day, over a rugged but well-wooded country, walked and rode twenty miles, encamping upon the left bank of the Modon ; one solitary partridge being the day's food for four people. The Okota here becomes formidable from the waters of the Nater and Modon, which enter it from opposite points. The former river inconvenienced us much, we being obliged to ford it three times in the short space of seven miles, and with no inconsiderable risk. After the passage of the Nater, ascending an elevated and rugged mountain, whence we enjoyed a fine view of the surrounding country, we descended and entered upon a swampy overflowed country, covered with fallen trees which impeded our progress terribly. A desolated forest was our companion for many miles ; here and there we found a few berries, especially of the moroshka (*rubris chamaemorus*), a yellow berry, about the size of a strawberry ; there were also *some bilberries*. We halted on

an island where the remains of a post-house are to be seen. It rained during the night, and we had some heavy thunder, a sound become unusual to me.

The next day, about one mile farther, we reached the junction of the Arka and Okota, but they had swollen so much from the rains, that we were again detained. I therefore went in search of game with our Yakut's gun, but unhappily, the powder, which had been kept in a rag, was so wet as to be entirely useless; we had, therefore, nothing but patience left, independent of four fat horses, which my finances would not allow me to sacrifice. The poor Yakuti would willingly have allowed it, but I could not think of permitting them, upon my account, to suffer so great a loss, and therefore determined to let them act as for their own welfare, knowing, as I did, that none of their nation would deem it necessary to kill a good horse, till his owner had been nine days without animal food.

The number of islands in the river increased to an astonishing degree the velocity of the stream in the channel, which brings down with it immense masses of ice and trees; and even had I been possessed of a canoe, or had the river been more tranquil, it appeared impossible for the horses to ascend the quays on the opposite bank, which run into the river in a shelving manner, eight or ten feet out of the water. Now and then a mass of ice, or a tree, would strike the quay, and tearing away the shelving part, would leave a perpendicular spot of some yards. I walked along the banks of the river in search of a place to cross, but in vain; we therefore began to fell timber, to be employed in the formation of a raft if necessary. More rain came in the evening, and we passed an unpleasant night.

ly watching the rise or fall of the river. I eaten nothing for two days, and only aries on the two preceding them. At noon following day I had completed the raft, and extremely hungry, determined to attempt age of the river with one Yakut and the . The other Yakut I left with the horses, uld not possibly perish for want of food, eared only anxious for the necessity which compel him to knock one of the animals e head,—that is, that the nine days should

To starve on one side of the river, be l in it, or die upon the other side, appeared me ; and I accordingly embarked our lit-age upon the raft, composed of ten logs of out fifteen feet long, crossed by five others, n crossed by two more, to form a seat for ion taking charge of the baggage, which ed to the raft. The spars were lashed to-y leather thongs, and two or three leather re cut up to increase their length. Each s also connected to the one on each side three grummets, formed out of the green s of the trees on the banks of the river ; raft appeared to me strong enough to re-vere concussion. We also provided our-ith drift spars, formed into oars, to serve and assist in gaining the shore should an happen. My papers and journals were round my body, and I took my station in , in order that I might avoid danger, and the centre of the river.

s with difficulty we moved our vessel into a channel, from the number of eddies ; but nce reached it, we descended in a most ing manner, *sometimes* actually making the

head giddy as we passed the branches of trees, rocks, or islands. No accident happening, and the river widening, I began to congratulate my companions on the probability of breakfasting the next day in Okotsk; but as yet I had not got upon the proper side of the stream, the islands and shoals perpetually turning us off. The Cossack and Yakut continued in a state of alarm, not entirely without cause, for, upon rounding a point of land, we observed a large tree jutting into the river, with a tremendous and rapid surf running over it, the branches of the tree preventing the raft from passing over the body of it, which was so deep in the water as to preclude a hope of escaping with life,—it was at least impossible to avoid being wrecked. The Cossack and Yakut crossed themselves, while I was quietly awaiting the result in the bow. We struck, and such was the force of the rebound, that I was in hopes we should have been thrown outside the shaft in the subsequent approach. I was, however, disappointed, for the forepart of the raft was actually sucked under the tree, and the afterpart rose so high out of the water, that it completely turned over, bringing the baggage under water; the whole then, with the Yakut and Cossack, proceeded down the stream, and fortunately brought up upon an island about one hundred yards below. In the meanwhile my situation was dangerous; being in the bow, I could not hold on the raft as my companions had been able to do, for fear of being jammed in between the raft and the tree. I therefore quitted my hold, and, with infinite difficulty, clung to the outer branches on the rapid side of the tree; my body was sucked under, and no part of me was out of the water but my head and arms. I could not long remain in such a state;

making, therefore, one vigorous effort, on the basis of which it was clear my life depended, I climbed to the top of the tree. I was throwing off my park, when the branch gave way, and I fell head down, half drowning, to the island. It was a fortunate circumstance that the raft upset, otherwise it could not have brought up at the surface; which it did in consequence of the baggage being so deep in the water.

In my situation, notwithstanding, upon the island, my lot was by no means pleasant. On either side of us lay a rapid channel, and I was as far as ever from accomplishing the object I had in view, which was to get upon the right bank of the river; when I might expect to reach some habitation, being none upon the left bank nearer than a hundred miles, half way to Idgiga. My first business was to change my wet clothes, and warm myself by exercise; the next was to unlash and land my baggage, and to save as much of the raft as possible, our deliverance depending upon it. By dint of work we accomplished it ere the sun had set; when it soon began to be very cold. The advance of the night was unfavourable, as it added rain; it would therefore have been high-discreet to remain longer than necessary, as the storm might, in one night, so increase as to cover the land.

To launch a raft into the channel I could not attempt, as by that time it would be dark, and we should certainly meet with the same accident, and with only worse results. I therefore walked towards the head of the island, till I came opposite to a large rock which had fallen from the continent nearly half across the narrowest part of the channel, which was but about fifty or sixty feet. To swim through

the central part of it was impossible; but it appeared to me probable, with the help of nautical ingenuity, to save not only ourselves, but also the baggage; and this I accomplished in a true sailor-like fashion.

The baggage and spars were first removed from the place of wreck to that we purposed departing from. These spars were, as I have said, about fifteen feet long, a length which would not more than one-third reach to the tree, allowing a proportion to be within the beach. I therefore placed the heaviest baggage in the water, consisting of four bags lashed together, to which I lashed the inner ends of two of the stoutest spars, keeping a line fast to the outer ends, to prevent the strength of the stream from carrying them down. I should say, that the place where I sunk the baggage was past the parallel of the tree, to which I desired to get, five or six feet, in order that the last of the studding sail booms which I should rig out might come on the rapid side of the tree, and thus form a bridge. I then carried out two more spars, and lashed their *centres* to the *outer* ends of the *two* first spars, while the *inner* ends were lashed to the *centre* of the two inner spars; the second two spars had also a guy fastened to their outer ends, as a support. I had now reached within eight or nine feet of the tree, a space including the most rapid part of the stream. I accordingly sent *one* more spar, dropping it between the others in such a manner that it should fall *tides-way* of, and two or three feet beyond, the nearest part of the tree. Of course it required *no* guy, and but one inner lashing, as it could not get adrift or fall to leeward, unless the tree gave way. My reason for sending one spar at last, was to prevent, as much as possible, an extra surf; for, as it

great difficulty in reaching the tree. The
 allowed in safety ; but of course I could
 the Yakut to attempt it ; the bare idea
 to him. I therefore returned, and ma-
 a long line out of leather strips from two
 ing it over to the Cossack, keeping one
 the island. My bridge thus appeared

le me to ferry over my Yakut, the bag-
 lastly, myself, I converted the bridge
 which had a line fast to it from each
 river, the Cossack hauling it to his side,
 again. When it came to my turn, I had
 advantage of a check line, for there was no
 like it fast to. The consequence was, in
 the tree, the raft upset, and I got a severe
 held on, however, and was pulled ashore
 state, from the effects of the cold, that
 became like a firm casing of ice. Not-
 ing, I could not but be thankful for two
 as ; the last of which, I suppose, occur-
 o'clock at night.
 immediately *had recourse* to flint and steel,

veloped in flames, and we were obliged to prevent its being fatal to us.

This immense fire raging round us, effected of inducing the other guide to swim across the river to our relief, either as we were there, or that other assistance was at hand : a service which must have formed with no small difficulty or peril on the part of the Yakuti, it was a happy accident, from the general want of food, and from the distance of their home, it was impossible for them to have returned without a fresh supply. Not far from the right bank of the river Okota, we were assisted in twenty-four hours. The boat had arrived, by the winding of the river, at a distance of sixteen miles ; but in a direct line from the mouth of the Arka and Okota, not more than ten miles ; so that the fire was readily distinguished by the Yakut I had left with the horses. He was much delighted with his good conduct in

The third day without any food had now passed; and the fifth, with only a few berries to keep our spirits up, had arrived, when, on the dawn of the sixth (18th June), we again took to the horses, crossed the Rounar, and passing over a mountainous and sterile country, for near forty miles, arrived at the habitation of a Yakut prince, called Gregory Semoff, upon an island in the Okota. My host was neither civil nor hospitable; but by a sort of bribe I got some horse-meat from him, and which was considered, at that time, a great delicacy, added some bread which I procured from the sailors' carpenters employed in felling timber for the wharfe-yard of Okotsk. Fresh horses were given to me at this station, and I proceeded on to Okotsk. The route lay through some fine park-like scenery, and then over a sandy forest of tall pine-trees; the weather was most unfavourable, as it rained hard. At length we reached the eastern sea-coast, that is, the North Ocean, and was compelled to halt at a miserable hut, affording scarcely a shelter from the elements. The following morning, to assist the natives who begged of me to leave their horses in my care, I paddled along the stream to the old

town of Okotsk ; and calling on the police-master, was by him, in the government boat, carried over, with all the formality and respect due to my rank, to the abode of the chief of Okotsk, Vladimir Ushinsky, than whom I have never found a better man, or one who possesses more real goodness of heart under the most severe and forbidding countenance.

I was provided with quarters at the abode of the police-master, whose brother had that day been drowned in floating a raft down the Okota, not far from where I was wrecked. I waited upon the chief of Okotsk as soon as I could put on a clean dress, afforded me through the kindness of a Mr Gardner, a Bostonian, settled in Okotsk as an agent or retail trader. The chief felt much surprised at my haggard and miserable appearance. My face was completely frosted, and bore the effects of exposure to the wind in no ordinary degree. My long red beard, longer red locks, and almost frightful aspect, now suggested to me the propriety of shaving myself as well as of getting my hair cut, neither of which I had permitted for fifteen months. To this measure, however, I did not consent, till I had determined, in consequence of the information I received, and the general circumstances attending my situation, to return to Europe. I did, however, shave in the forenoon, and had my hair also cut ; and receiving as a present a surtout and pair of blue trowsers, I became once more a genteel dressed man.

Through the hospitality and kindness of Captain Ushinsky, I was enabled to pass a most pleasant day in the agreeable company of the officers both of the naval and civil service of Okotsk. The chief had long been expecting me, and continued so to ex-

pect, until he heard of my departure *from* Yakutsk *for* the Kolyma ; when, to use his own expression, “ *he gave me up for lost.*” I do, however, say that whatever are his, and may be others’, opinions, I feel certain, that one half the difficulties, and nearly all the dangers and exposures, to which travellers, *in any climate*, are most commonly subjected, and of which they so much complain, are the result of either their own physical incompetency, or want of prudential foresight. I certainly do not understand making much ado about nothing, nor writing expensive quartos upon a subject which might be compressed into a duodecimo, so far as regards the value of the information ; but this I do understand, that were a similar, and apparently a difficult journey, left open for *me* to perform, which could in the least tend to the benefit of mankind, and, in the event of *success*, to my own advantage, I would no more think of refusing to undertake such a journey, than I would that of exploring Africa to-morrow ; for which purpose, and with slender means, I am ready in six hours. I did utter these sentiments at Okotsk ; I have now again uttered them in England, conscious that my plan is economical, prudential, and feasible.

CHAPTER IX.

Reasons for determining to return to Europe—Description of Okotsk—Observations on the navigation of the Amour—Kurile Islands—St Peter and St Paul's—Captains Vasilieff's and Kotzebue's Expeditions.

THE circumstances which induced me to determine upon a return to Europe, previously visiting Kamtchatka, I will beg to lay before my readers, in the words of part of a letter I addressed to the same purport, to the governor-general of Siberia. It is as follows :

“ Okotsk, July 8, 1821.

“ MOST EXCELLENT SIR,

“ From the river Kolyma I had last the honour of addressing your excellency ; since when I have come over a large tract of desolate country, nearly two thousand miles, with great labour and some peril. The difficulties I have had to contend with surpass every thing of the kind I have before seen, and required every exertion of mine to conquer ; which I did not do under seventy-five days of hard labour. My route lay along the Kolyma, Zyzanka, Indigirka, Omekon, and Okota ; all of which are, at this season of the year, large, rapid, dangerous, and almost impassable rivers. Besides these, there

are numerous other streams, as well as lofty mountains of frozen snow, large overflowed marshes, crowded and decayed forests, and half-frozen lakes, which present themselves in every part of this journey ; suffering at the same time cold, rain, hunger, and fatigue, with forty-five nights' exposure to the snow ; at times without fire in a frost of thirty degrees ; and, latterly, five days being passed without food ; never having seen an individual during four hundred miles, and but one habitation in the extent of one thousand ; being frequently bewildered and lost in the snow mountains ;—all these circumstances tend to weary and dispirit a traveller upon a like journey, and render him incapable of addressing your excellency in a proper style. But I am unwilling to allow a post to escape, without communicating my past and future movements.

“ I was induced to undertake the late journey, in order that I might reach Okotsk in time to proceed to America or Kamtchatka, as circumstances should render most desirable or necessary ; otherwise the proper route from the Kolyma to Okotsk is viâ Yakutsk, the route of the Omekon having been discontinued thirty years, in consequence of the difficulties and perils which ever attend it.

“ I waited upon the chief of Okotsk, who received me with distinguished hospitality and friendship, and who informed me that there was no vessel of any description lying in the port bound to America ; and although two vessels were expected to arrive in the course of the summer, it was by no means certain, or probable, that either of them would return to the opposite continent during the same season. Such being the case, the chief of Okotsk, agreeable to a request I made, has consented to my *embarking in the imperial transport,*

bound to Kamtchatka : there I purpose passing the remainder of the summer in travelling about the peninsula, and propose to return to this place by way of Idgiga, during the early part of the winter, and thence to Europe, where I hope to arrive in the fall of the ensuing year, passing through such places in Siberia as I could not visit upon my outward journey.

“ The circumstances which have arisen since my last letter to your excellency, are such as to render useless my proceeding to America, even if a conveyance offered ; but, as no opportunity does exist, I must remain a long time in Okotsk if I persist in my plan. Thus I hope that your excellency and the imperial government will not feel displeased with me, in consideration of the reasons I have given for retracing my steps, in preference to proceeding beyond the peninsula of Kamtchatka.

“ Your excellency is well aware, that the object I had in view, when I undertook this long and painful journey, was first to ascertain the situation of Shelatskoi Noss, then to cross from Asia to America, at Behring's Straits, and trace the latter continent as far as possible to the north-east.

“ The first problem is entirely solved by the fortunate issue of Baron Wrangel's expedition. The north-east boundary of Asia being thus established beyond all doubt, I could no longer have any reason for remaining in the vicinity of the Kolyma, which place I accordingly quitted the moment the fair held with the Tchuktchi upon the Aniuy was finished.

“ My original desire, or intention, of proceeding to America, is now become as delicate as was my situation on the Kolyma, as a naval expedition is there also, having the same object in view that

I have. I cannot be allowed to act with them, for the reasons before assigned : I will not act against them ; and, therefore, I cannot act at all. It would be madness and presumption in me to attempt a task of the kind while an expedition is there. I cannot get to Behring's Straits but with their assistance, or that of the Tchuktchi, and thus I cannot get there at all, and can only wish for a successful termination of Captain Vassilieff's exertions. Should that officer withdraw entirely, I will hereafter undertake the same journey, and may possibly do that by good fortune, which even more zeal and talents cannot execute !

“ Had I known, when in Europe, of the expeditions on the Kolyma and in Behring's Straits, I do not think I should have taken this route to employ and improve myself. I shall, however, remember my journey with gratitude, pleasure, and pride. I confess to your excellency, that I do not see the necessity for continuing my journey merely for the sake of consistency. I am not afraid of the task, and I am as happy in a wild desert as in a proud capital ; but I conceive I can better employ myself, more improve myself, and possibly do better altogether. I have much to see and learn during the ensuing fifteen months which I shall pass in Siberia, and, therefore, I hope I am about to adopt that line of conduct which, under all the circumstances of the case, appears most proper, however much I regret the *necessity* of retracing my steps. I have the honour to be,” &c.

Such were the ideas suggested to me, and such was the conduct I felt it necessary to adopt, in consequence of the conversation I had with the chief of Okotsk, and the head of the American Company, *who told me that he had no idea of any*

vessels offering this year for the opposite continent. No other vessel could offer, as the ports of Okotsk and Kamtchatka had become shut to all strangers since I had left St Petersburg, thus, in fact, compelling me to adopt the most proper line of conduct, as will hereafter appear, upon my arrival at Kamtchatka. I will therefore abstain from touching any more upon that point until I reach that peninsula, and content myself with viewing the wonders of Okotsk.

Okotsk is situated in the north-east part of a bay formed by the rivers Okota and Kouktui, and is approaching to more respect and consideration than it ever did before, owing, I believe, principally to the active and honest exertions of the present chief. The town was formerly situated on a low sandy beach close to the sea-side. Its exposure and inconvenience were never pointed out till by the late chief, now commanding at Yakutsk, who was, in consequence, ordered to transfer the town from the old to the new site, which is on the left bank of the Okota, as the old one was on the right. The order for the removal has been issued several years, yet little was done till lately : even at present the new site contains but the government buildings, and those belonging to a few of the Cossacks and sailors. The more considerable part, which are erecting by the American Company, will, it is said, be transferred hither in the ensuing winter. The plan upon which the town is building is good, and, when finished, will be, after Barnaoule, the neatest place in Siberia, although upon a small scale, for there are not more than fifteen or sixteen hundred people in it. The country round Okotsk is highly productive of fine timber, in consequence of which a dock-yard has been

made, and some fine vessels have been built, to enable the government to transport provisions to Idgiga and Kamtchatka.

The chief of Okotsk is generally a captain of the navy of the second rank, and subject only to the orders of the governor-general of Siberia, although the governor of Irkutsk has some power in civil cases. At present the establishment consists of three captains and four lieutenants, with corresponding officers of all classes, and nearly six hundred seamen and artificers; the allowance for maintaining and paying whom is less than two thousand pounds per annum, independent of their bread, which is about eight thousand bushels. The people are employed in building vessels and storehouses, in rigging and sailing the former, and filling the latter with flour and stores. The receiving and sending away of flour is a serious and laborious duty, and open to much abuse and pilfering. Besides these works there is a salt concern, under the charge of an officer who commands the convicts, at present ninety in number, the maintenance of whom, including provisions, clothing, and pocket-money, is about a thousand pounds per annum. These extraordinary expenses are occasioned by the allowance of double rations, in consideration of their hard work. The allowance to a convict is as follows;—Eighty pounds of rye flour for each man per month, one hundred and twenty pounds of the same flour for each man who has a wife, and forty pounds in addition for each child, male or female. Each man is also allowed ten pounds of oatmeal, or rice, and twenty pounds of butter per month. They are also allowed two complete suits of clothing, and about twenty shillings per annum in money. Such an allowance of provi-

sions is commendable and liberal; indeed it is so great, that the poor wretches are enabled to sell one-half of the bread for the purchase of tea, sugar, and meat; and of the latter there is not so much necessity, when the superabundant quantity of fish is taken into consideration, which is so great that I believe from twelve to fifteen hundred dogs are fed with it during the greater part of the year.

The quantity of salt made by the convicts is about two thousand five hundred poods, or one thousand six hundred bushels, which is sold alike to rich and poor, at the rate of three shillings a bushel, equal to two hundred and fifty pounds for sixteen hundred bushels; so that the salt, although a necessary, is a losing establishment of seventy-five per cent. The liberality and consideration of the Emperor upon this head cannot, therefore, but be duly appreciated.

There are also at Okotsk fifty Cossacks, whose allowance of flour is thirty poods, or one thousand two hundred pounds weight, per annum, and oatmeal and butter in proportion. The children have half that allowance, and widows and orphans are considered as entitled to the same, thus bringing the establishment of Okotsk to about two hundred and fifty thousand roubles, or ten thousand pounds, per annum. To meet this, the yasack, or tribute, paid by Yakuti and Tongousi is two thousand eight hundred and twenty-eight roubles, or less than one hundred and twenty pounds, and the duties upon imported goods amounted, in three years, to less than seven hundred pounds. These are the only sources of revenue to Okotsk, if I except that arising from the American Company, who are supposed to pay a tenth of their imports to the crown at St Petersburg, as also a tenth of

ers imported from Kamtchatka; neither of payments take place, I believe, in so correct manner as they should.

the expenses of building and fitting out a port brig of one hundred and sixty to one hundred eighty tons, I have the account, which is at less than two thousand pounds; the brig was one-half the amount of the stores, their transport from Irkutsk the other half. the whole, however, the vessels are eminent, and worth the money. The art of shipping has considerably improved, if I may judge by the different samples lying in Okotsk; three have been built within the last three years, ought to last at least twenty.

These are the official returns of Okotsk. Of the life of society little can be said, no merchants reside in it, and the chief being the only married man belonging to the navy, and but three or four, have wives, that belong to the civil service; but, there is very little society, and less education, although a school has been established by the present chief, which may hereafter do well if military discipline be kept up. There are sixteen boys in it, who cost nothing either to the empire or their families, being supported on what is called, *economy money*, i. e. the money saved from the sums allowed by government for the maintenance of the equipage, which savings the present governor, much to his honour and credit, devotes for the education and other benefit of the town.

Such credit is also due to the exertions of Captain Ushinsky, in having redressed many of the wrongs under which the aborigines laboured, and all as the abuses in the public departments.

Formerly when an officer wanted money, he had only to go to the dock-yard and take such things from it as he could sell to raise it ; and so recently has this abuse been exercised, that an officer, high in rank, did, even in the last year, take articles to a considerable amount from one of the storehouses; not in a shy or shamefaced manner, but openly, as an act justified by habit and long usage, and not at all questionable. I can see no reason why such conduct should be practised here, as all officers receive double pay and extra provisions, besides being always considered as regular traders ; indeed it has, since my return from Siberia, been sanctioned by authority, that officers in certain departments or situations may trade. The consequences will be most fatal to the poor aborigines, and most destructive to the interest of the fair trader, who is taxed to an amount of at least ten per cent per annum, upon the capital he professes to trade with.

The abuses under which this persecuted race of aborigines have existed, I shall forbear to mention. I will, however, give two samples of the manner in which an avaricious chief may make his fortune.

A Yakut applied to the orderly Cossack of the present chief, who spoke the language of the Yakuti, stating that he wished to speak to the chief in private. The poor fellow was admitted, when he beckoned the interpreter to withdraw. This, however, was impossible, as the man, who kept his hand in his breast, could not speak a word of Russian. The chief demanded what he wanted ; still he declined answering in the presence of the Cossack. At last, after many entreaties, he pulled out a paper from his bosom, and gave it to the chief, at the same time kissing his knee ; and observing that he was a poor man, and had never been

Okotsk before. The paper was opened, and found to contain a hundred roubles, nearly five pounds. The chief demanded the purpose of the money ; and by reasoning with and threatening the poor fellow, he at last got out the truth, which was,—that an old custom prevailed among the Yakuti, in order to enable the chief of Okotsk to live well and support his station, that every Yakut should pay, upon his first entry into Okotsk, a sort of poll-tax to the chief ; and that he, the Yakut, in common with the rest, had now only to continue the custom, and to express his regret that he was so poor a man as not to be able to do more. I need not say the money was returned, the man made to understand that such practices were abolished, and a message sent to the princes of the Yakuti, to say, that should such conduct be again attempted with the present chief, a severe punishment would be inflicted upon the party offending. When the number of Yakuti who annually go to Okotsk are considered as not falling short of three or four thousand, it may be very readily guessed what the average receipts of a chief were, and might still be, upon the score of privilege and extortion. The harm of bribery and corruption is, however, now so decidedly broken at Okotsk, that I feel certain no place in Siberia will thrive more, although its chief will always be unpopular.

I will mention one instance more of the prevalence of corruption in this part of the world, and of the truth of which I can myself testify. A decent dressed woman called upon the present chief of Okotsk, with a petition that her husband should have his fetters taken off, and be allowed a total respite from the public services, in consequence of his age and infirmities. Upon inquiry, her hus-

band proved to be a convict, and, still more, one of the very worst. The woman was desired to call again, and was then told that the chief was sorry that the conduct of her husband was such, as prevented the chief's considering it necessary that he should be excused from the public works ; and that his health, his age, and circumstances were such, that no extra consideration of his case was necessary, and therefore he must continue to work in his fetters. The woman then put a letter into the hand of the chief, which, on opening, was found to contain bank notes to the amount of three hundred roubles, a sum equal to fifteen pounds. This was her last resort ; the money was returned, the former opinion was confirmed, and the chief, for having done his duty, and for having honourably refused the bribe, was denounced as the most arbitrary and tyrannical, insomuch that a parallel was drawn between his conduct and that of his predecessors, by whom it seems such things were practised.

These are in no way extraordinary cases, nor are they by any means the most grievous. Those arising from the oppressive acts of the commissaries, or tax-gatherers, are the worst. I feel confident that no real redress can be granted until the yasack is done away with entirely ; and this step, I hope and believe, will, ere long, be taken. The sacrifice would be small ; it might even be done with great advantage to the empire, and to the increase of the population as well as of the revenue ; but I have done, and am really tired of being under the necessity of telling such true tales.

During the latter part of my stay at Okotsk, two vessels arrived there from America, one of which was very valuable, worth about seventy

thousand pounds, the other about thirty thousand. They were brigs, and loaded with sea-otters, beavers, sea-cats, martins, river-otters, and various other less valuable skins. The vessels appeared well manned, and tolerably managed, which is more than I can believe is the case with the government transports; but as I am going in one, and shall have a fair opportunity of judging, I will, for the present, abstain from further remark. I remained in Okotsk a considerable time, and felt highly gratified with the attentions shown to me by the chief, his amiable lady, and the officers. Every thing that could tend to my comfort was done for me. I did not, however, receive from the American Company's representatives those attentions to which my situation might seem to entitle me, in consequence, I believe, of what had taken place at St Petersburg. One circumstance in particular occurred to me, which was calculated to lower them and the concern in my estimation. One of their brigs was to be examined,—visited for the purpose of ascertaining if the provisions were good, if the people were satisfied, and if the furniture of the vessel, in spare sails, &c. was as is directed by law. The chief and officers were invited. This was at a feast given by the chief, at which I was present, and where he was requested to bring me with him; I even heard the invitation, but I naturally considered that, if they *really* wished me to partake of the *déjeûne* to be given on board, they could as well have invited me upon the spot, as desire a second person to bring me. The day the survey was to take place, all the individuals expected repaired to the scene of action except myself; a boat was dispatched after me, but I declined the invitation *in toto*, conscious as I was that something existed which,

probably in obedience to directions, I ought not to see, and knowing, as they must, that I would expose, if I discovered it. I neither have nor had any hostility towards the American Company; on the contrary, I say, that I think their establishment in Okotsk is upon the most liberal scale, probably too liberal, and that there are fewer faults in the concern in Okotsk, than in any other of theirs that I have seen.

The prices of provisions and labour will conclude these remarks upon Okotsk. Bread is twelve roubles a-pood, and meat from four to five roubles the same quantity; that is, bread is sold by government at nine shillings for thirty-six pounds, while meat is four shillings and sixpence for the same quantity. Fish, from its abundance, is not vended. Tobacco, cottons, and earthenware, cutlery, and such articles as a poor people can want, are not exorbitant; while a common working man can earn four, five, and six shillings a-day, which are, however, sure to be spent at the kabak, or grog-shop. Wine of an infamous quality, the worst of spirits, and a sort of provincial naleefka, and fructovka (a spirit of the flavour of cherry-brandy) are most exorbitantly dear. Those who have industry, strength, or talent, cannot fail of making their situation comfortable in Okotsk, if they be so disposed. The place is generally considered healthy, yet for invalids there is a good hospital, with plenty of attendants. The gardens produce some vegetables, but commonly of an inferior growth; mushrooms are most abundant, and very fine. In other respects the government of Okotsk can only be termed an immense dreary waste, extending from the river Uda to Idgiga and Anadyr, and the whole population is less than four thousand souls. In spite of the

attentions and hospitality heaped upon me by the inhabitants of Okotsk, I could not regret my departure. It has such a sameness—so little to be seen—so little to interest—and what was worse than all, so much scandal circulating there, that every thing done in Irkutsk and St Petersburg was sure to be known in a very short time.

It was on the twenty-fourth of August that I embarked on board the imperial transport brig, Michael, to proceed to Kamtchatka. She was commanded by a lieutenant of the navy, and had on board thirty-two people, besides passengers. I mention the number, because it is considered in this part of the world that such a number falls far short of what is necessary to work a vessel in a case of emergency.

Our destination was St Peter and St Paul's in Kamtchatka : we cast off our lashings about noon, and were soon in the centre of the tremendous tides-way, which makes in and out of Okotsk every six hours. In attempting to cross the bar, she struck, and, as the vessel was rather late, the ebb-tide having made, of course she continued to strike, and in fact beat so hard, that it was necessary to get down the lower yards and topmasts, and even to prepare to discharge the cargo. Every exertion, but in vain, was made in the two following tides to get her off from the bank which received Captain Billings' vessel, the *Good Intent*—she was left so truly dry at low water, that I walked on shore to communicate with the chief.

On the afternoon of the twenty-sixth, by main force, we hove the brig into deep water upon the rising of the tide ; and as no damage had been apparently done to the vessel, of course resumed the voyage. We may be considered as fortunate ; the

surf is at times so terrific as to prevent the possibility not only of a boat, but of any vessel, outriding it many minutes. The shallowness of the water, a long way off from the entrance of the harbour, the rapidity of the tides, and the cross-setting of them at the harbour's mouth, preclude the possibility of Okotsk becoming an easily accessible port, except for a small merchant vessel. Necessity alone, resulting from the loss of the *Amour*, can induce the Russian government to keep it, at such an expense, and under such circumstances. If the *Amour* had not been sacrificed through the bad generalship of the count, whose name I do not recollect, or the superior duplicity of the Chinese, all the productions of the Pacific might have entered and ascended that river, nearly to the fortress of Kiakhtha; but in the present state of the limitation of the Chinese and Russian empires, the produce of the Pacific is necessarily sent to Okotsk, as there is no other eligible place.

The produce arriving at Okotsk has to choose betwixt the dangers of a bad roadstead, and of a very difficult port. From Okotsk to Irkutsk and Kiakhtha, are near three thousand miles of the most difficult and dangerous land-carriage in the world; a journey which cannot be accomplished during the season in which the vessels generally arrive at Okotsk; consequently one year's interest of the money is sunk, besides the exposure of the goods to the ignorance and negligence of warehouse-keepers, and the dampness of the atmosphere.

The only period in which the port of Okotsk can be approached or departed from, is between the months of July and October, or only four months. The general period for vessels arriving is the latter part of July or beginning of August; too late in

the season to admit of their cargoes being forwarded to Yakutsk in time to take the winter road, and reach the fair of Kiakhta during the same season, as the fair commences in February. Were the American Company to dispatch their vessels from the continent of America in the month of May, they would always arrive at Okotsk before the 1st July ; their cargoes might be transported to Yakutsk by the end of August, at a cheap rate, by means of the return horses, and then to Irkutsk by water, previous to the winter setting in, and so be ready for disposal at Kiakhta in January. The furs would arrive in a better state, and of course fetch a better price. What incalculable advantages would result to the American Company and to merchants in general, to say nothing of its convenience to the government, from the employ of steam-engines upon the rivers Lena, Angara, Selenga, and Baikal lake ! What country in the world has such advantages for the employment of team as Siberia ; and what a relief would it not give to the aborigines, in saving them at least *fifty thousand* horses every year, which are now, through fatigue, cold, hunger, and being overladen, left to perish !

The value of the Amour is, however, so generally known, and its loss so sensibly felt, that it is needless to point out the benefits which would result from the purchase of it ; all that surprises me is that the Russians have not attempted to open a trade even for the privilege of navigating the river ; then the direct trade between Irkutsk and Khabarovka, Japan, and the Pacific in general, would be astonishing, while now it is at best inconceivable.

return to the voyage, which occupied us four-

teen days, with mild and favourable weather, and but little fog; on the seventh day we passed the Kurile Islands in safety, and on the tenth made the Avatcha Peak. Strong north winds, and a still stronger and perpetual south-east current, together with the want of practical knowledge in the commanders of the vessels in this part of the world, retarded our progress, so that we did not anchor until the fifteenth day, when I was received under the roof of the amiable and hospitable chief, Captain Rikord—the gentleman, as will be remembered, who rescued Captain Golovnin from the hands of the Japanese. I arrived in time to partake of the feast given in honour of the saint after whom the lady of the chief is named. It was attended by all the youth, beauty, and fashion of the town of St Peter and St Paul's.

During our passage across the sea, little of interest was excited. I had occasion, during calm weather, to witness the struggles of the whale, and listen to its groans, when attacked by the *kasatki*, a species of sword-fish. We had frequent opportunities of ascertaining the state of the currents, which were invariably found setting to the S.E. at the rate of two and three miles per hour. In one of these excursions, and when I was in a small punt-boat, with a deep sea-lead down for an anchor, the laziness of the crew got the better of their prudence, and nearly prevented my now relating the tale. Although in a small punt, the crew persisted in pulling towards the brig, with the deep-sea-lead down; the consequences were, as might be expected, the moment we ceased rowing, to enable us to take hold of a rope thrown to us, that moment, of course, the punt got sternway, and continued it until the lead was brought up and down;

but although the boat was nearly swamped by this unsailorlike conduct, yet, in spite of remonstrance, was it again fruitlessly attempted. Whether this conduct proceeded from obstinacy, ignorance, or fearlessness, I leave the reader to judge. At length the crew took my advice, and we gained the brig. I had also an opportunity of establishing the latitude of Povorotnoi Noss, and which is correctly laid down in the old chart of Admiral Saretcheff, while the more modern one of Admiral Kruzenstern is incorrect by nineteen miles. The longitudes of Nishney Kolymask, of Okotsk, and of the island of Eon, have, however, 3° of error in the former admiral's chart; this may probably have proceeded from inadvertency, and not from error of calculation, as Captain Billings used English books to calculate by, while Admiral Saretcheff must have used French;—the former only understood his own English, and of course used the meridian of London; the latter, most likely, used the meridian of Paris, as he did not understand English. I mention the circumstance of exculpation, because the errors are known to exist. Three degrees must be added to the longitude of the place according to the charts extant; in short, it ought to be about 146° east of London. In passing the Kurile islands, the general line of them appeared to be well laid down, with the exception of the second and fourth islands, which, with Cape Lopatka, should be placed farther to the east, to bring them upon a north-east line with the islands to the southward of them; or the southern islands should be placed more to the westward, to bring them upon a south-west line from Cape Lopatka, for that is their exact direction, although the charts lay them down otherwise. I had *no other means than half-a-dozen*

compasses of ascertaining where the fault lies. The islands and peninsula are elevated, bold, and very accessible; passages may be run for during the night in spite of the fogs, and there is no danger anywhere but in the Lopatka channel, where a strong south-east current always sets. The average temperature of the atmosphere was 15° of heat.

In the harbour of St Peter and St Paul's, I found the Russian expedition under the orders of Captain Vassilieff, who had returned from a fruitless attempt to get round the American continent. They rounded Icy Cape about thirty miles beyond Captain Cook, although they fell short of him on the Asiatic side by two degrees. Little increase of knowledge will be gained to the world by this expedition; the most valuable is the having ascertained that a strong current runs round Icy Cape to the north-east and east,—so strong that it was with great difficulty Captain Vassilieff could get back his fast-sailing sloop. She certainly was not provided with the means, nor was she a fit vessel, for wintering on the American coast, separated from her consort, a large transport of six hundred tons. What would Captain Parry have given for such a *fair current*? Had the state of Captain Vassilieff's ship permitted his running for the accomplishment of the voyage in general, he certainly had the fairest opportunity that ever man had, for the result of Captain Parry's first voyage was known at Kamtchatka, as a correct chart of that voyage, and the situation of Melville Island, had been forwarded, and had actually reached there a few days after Captain Vassilieff arrived. Little or no doubt can exist that he could have reached Melville Island;—that there was an open sea to

it, and a current of three knots per hour, I reason to know. Unfortunately, however, the expedition was not in a fit state to make the attempt again ; but what may be done by Captain Bering, time alone will show ; though I believe the resources are so limited, that he is not to attempt the passage, but to survey the sound named Behring, and protect the Russian commerce in the north of the world. I am, however, free to say that the passage by Behring's Straits is the best. Should Captain Kotzebue be determined to attempt the passage round Icy Cape, he will, no doubt, find a place for wintering ; or he may winter in the sound called after, and re-discovered by him, as it has been known to the Russians more than a hundred years. The winter may be employed to great advantage, as there are natives in the country, with dogs and rein-deer ; and I should think, with proper caution and people qualified for the task, the coast as far as M'Kenzie's river might be surveyed in one winter. Dogs to assist the party should also be procured at Kamtchatka.

And also in St Peter and St Paul's, a brig of Portuguese colours, as well as one from the Sandwich Islands. The former brought a cargo of goods from Macao, the other a cargo of salt sent to the Emperor from the sable Majesty of the islands, and in return received as a present such things as seemed most desirable ; among these some animals, with a view of propagating the species ; though it may be doubted whether the introduction of bears, which they also received, would be so beneficial or acceptable. The Sandwich is a fine American vessel, officered by three Americans, and entirely manned by natives. The policy of the executive here towards the Sand-

wichers was flattering ; and it is not a little singular that the first voyage undertaken by them should be to Kamtchatka, almost the least known part of the world. What with the expedition, transports, and foreigners, this place had, at one time, as many as eight vessels in it ;—the largest number it ever counted before.

It may readily be believed that I felt great pleasure in meeting with three Englishmen, independent of three on board of the Sandwich vessel, in such a distant part of the world. One was the Russian consul-general to the Pacific Ocean, Peter Dobell, Esq., formerly a merchant of Canton, residing in Manilla, whither he had returned after escaping the dreadful massacre in that place. I found him, during the long stay I had in Kamtchatka, a polite, hospitable, and finished gentleman, a sincere friend, and, in short, a *real Irishman*. He had some few years ago been so fortunate as to contribute to the safety of a Russian frigate, under the command of Captain Krusenstern, which ship was upon the point of being seized by the Chinese authorities at Canton. Secret intelligence communicated to Mr Dobell, was as readily given to the captain, and reported to the Court of St Petersburg, when the Emperor Alexander, ever alive to reward the meritorious, presented him with a valuable brilliant ring, and gave him his present situation ; which last was the more acceptable, as he was compelled to quit Canton, and forfeit his business. A second was a plain, good, honest Bostonian, encumbered with six children and a wife, else a man who ought to return to his native land, where his circumstances are good ; I experienced much civility and kindness from him. The last was a cockney, who had

been exiled from Moscow for forgery ; and, although he had been flogged, knouted, &c. was still well received in every house. I know not how such things are managed in this country, but no doubt can exist that in Siberia, and probably in Botany Bay, the convicts are well received, that is, if their situation in life was formerly respectable. For my own part, I could only pity him, and rejoice that the punishment inflicted was so merciful ; had he been a Russian, the case would have been different.

Time rolled away in the agreeable society of the chief and his amiable lady, together with the very fine young men who composed the officers belonging to the expedition and to the port. I felt anxious to get away from the perpetual course of balls, routs, dinners, and masquerades, which were alternately given by the chiefs of Kamtchatka and the expedition, as well as by the officers of them. Nor did the representative of his sable majesty of the Sandwich Islands fail to honour all individuals of rank and fashion with a splendid *dejeune*. The last fête given was by the author of this narrative, when the British flag, for the first time, waved over the land of Kamtchatka. However much the chief felt inclined to grant me the means of departing, it was impossible until the expedition had quitted the bay ; only one post could be sent, and that I desired to accompany. Two months passed in this manner before the expedition departed, when I was left to the free enjoyment of a passion which was crowned with the reward of marriage ;—so much then for my travellership. However, I had no alternative, and the day that Captain Vassilieff left the harbour of St Peter and St Paul's, I put the question. My

airy phantoms, my bold desires, and my eccentric turn, being thus dissipated by one woman, I prepared to make a tour of the peninsula before I led my intended bride to the altar.

ALL being prepared for me, I quitted the port of St Peter and St Paul's, accompanied by seventeen nartes, driven by the officers and principal inhabitants, and for two miles by the ladies, one of them, at parting, imprinting upon me a kiss, which was

Speaking silence, dumb confession,
Passion's birth, and infant's play,
Dove-like fondness, chaste concession,
Glowing dawn of brighter day!

It was not long before I reached Avatcha, where I found all the officers awaiting me, with tea and other refreshments. The distance we had come was eight miles, along the beach, and over a few little hillocks covered with some stunted birch. At eight in the evening of the 20th November, O. S. I proceeded upon my journey, with a Cossack and four natives; not that such a number was necessary to stow away *my* baggage, for it would not even fill the portmanteau of Sterne's Sentimental Traveller, although my pantaloons were of leather, while the others were of silk, and consequently more easy to stow away.

From Avatcha the path lies along the river, under its own name, which impeded our progress, and was otherwise unpleasant, as wetting me a good deal. The scenery was very dull, and I was so absorbed in contemplation, that I could hardly see the right side of any thing. At midnight I reached the ostrog of Koraki, forty miles from the port, where are a few fishing hamlets in tolerable condition. At one of them I fell in with an old shipmate, who had come in the same transport from Okotsk. He had departed from the port three days before me, but a too frequent use of brandy had induced the Kamtschadales to deny him drink in hopes of getting a portion of it.

The Cossack did not arrive at the halting place until eight in the morning, and then in such a state as to render him a fit companion for my old shipmate. By noon, however, I got away, and proceeded towards Nachiekin, thirty miles. The country was so deep in snow, that it was midnight before we arrived. We passed numerous half-frozen streams, the dogs suffering a good deal, and whenever I walked to relieve them, I was sure of

ving my feet severely wetted. At Nachiekin I had to combat with a drunken postilion, bad dogs, a saucy toion, and my old friend too much annoyed me. Patience was my only resource for some hours, after which, on a beautiful frosty moon-light morning, I resumed the journey over a picturesque and mountainous country, well wooded and watered. Late at night we reached a small place called Apachinsk, forty-five miles. Ere we arrived, we had to cross the river called Bolshaya in a canoe, the river not being frozen, a circumstance at this time of the year very rarely known. Thirty miles farther we reached the ancient capital of Kamtchatka, Bolcheretzka, now a small village, containing fourteen dwellings, one hundred and sixteen inhabitants, and about thirty balagans, *i. e.* sheds for drying fish. The path to it was over a flat level along the river. I was myself the driver towards the abode of my now father-in-law, whose homely manners, numerous, healthy, smiling children, and hearty breakfast, made ample amends for the fatigues of the last two days.

Bolcheretzka stands on the river of its own name, about fifteen miles from the sea of Okotsk, and has little to boast of at present but the affectionate remembrance the inhabitants bear to the memory of Major Behm, so highly spoken of by Captain King. I heard, also, strange stories of the celebrated Benjofsky, who made his escape hence to Canton, having previously murdered some people and fomented an insurrection. I heard nothing in his favour, although an old lady, afterwards my aunt, was a companion of his. I found Bolcheretzka to be inhabited by a civil people, all Russians; but were it otherwise, it might be expected I should speak

highly of it, as the first place where my wife saw the light of day.

I could not fail of being a welcome guest at such a place, where neither tobacco, tea, nor spirits, had been tasted for the last three months by any individual. Of course, I left a small quantity of each article with my friends, making them, as it were, roll in luxuries, in return for which I received several sables and foxes as presents. The state of the river was such as to prevent my proceeding upon my journey in less than two days, which period I passed very happily, wandering over the extensive site of this ancient place; it is said to have formerly contained to the number of five hundred inhabitants, which have been reduced, partly by the removal of the seat of government, and partly by disease. Ineligible as it is for a seat of government, I considered it as superior to St Peter and St Paul's; here there is unlimited pasture and an abundance of wood; there, neither the one nor the other. The advantage of the harbour of St Peter and St Paul's is, no doubt, a great thing; but the river Bolshaya is by no means inappropriate for the small transports from Okotsk; to say nothing of the greater number and more safe voyages which could be made, compared with those actually performed to the present capital.

Canoes being provided, I resumed my journey in a heavy fall of snow, and crossing three branches of the river, entered upon a trackless maze of snow six and eight feet deep; so difficult to pass, that it was three o'clock the following morning before I reached Utka ostrog, having been twenty hours in going fifteen miles. The route was along the sea-coast, having far to the right an elevated range of mountains. Three miserable dwellings, in an ex-

situation, but with fine meadow lands, and of game and fish, are all it can boast of. If game was absent, hunting, and, as I could not have fresh dogs, I remained six hours to rest before I had brought, and then proceeded upon my journey, reaching, by midnight, Kickchick, twenty miles from the place of equal wretchedness with the last, a place, containing but fourteen or fifteen inhabitants, most of whom are disabled from work by rheumatism. With the same dogs I reached Kotsk, thirty miles along the sea-coast, upon which a tremendous surf was roaring, with a north-west wind. There are in the neighbourhood several fine lakes, which never freeze, and produce trout and salmon peal of a fine flavour throughout the whole of the winter. Deer, mountain-goats, and game of every description that is found on the peninsula, abound in the mountains and forests, and fine meadow lands everywhere skirt the coast.

I remained to take tea with the old toion, whom I found to be a fiddler and a scholar, and departed for Vorofisky ostrog, forty miles. The mountains approached nearer to the sea-coast, and presented some beautiful scenery. I put up at the house of a wealthy Russian farmer, and felt highly gratified in observing a small but fat herd of reindeer.

This is considered a rich spot, boasting, I was told, of forty head of oxen; yet it contains but few dwellings with about forty inhabitants, not enough to keep up the chase. The place is situated on the Vorofskaya river, about twenty miles from the sea. There is a snug harbour at the mouth of the river, where the transports formerly visited, and the river is navigable to the village, which retains the vestiges of a former

of a small fortress. The meadow lands about it are at once extensive and-luxuriant. The inhabitants provided me with frozen fish, a delicacy I had so much enjoyed on the Kolyma, with ducks and rein-deer meat, as also with dogs to resume the journey, which carried me to Kolpakofskoi ostrog, thirty miles, along a dreary sea beach. The village contains six dwellings, and twenty people, who furnished me with dogs to Kroutogorova, thirty miles further, a beautiful situation near the extremity of the almost level plain reaching from hence to Bolcheretzsk. The famous sopka, i. e. burning mountain, near Itchinsk, here becomes visible, and, although the country is so rich, not a head of cattle is to be met with from Vorofakaya.

To Itchinsk are thirty miles of superior country, yet so deep in snow that we were obliged to take it by turns to go a-head with snow shoes ; at other times, the government of a narte was thrown upon me, which I at first made but a bungling hand of. Itchinsk has twelve dwellings ; it is, consequently, a considerable place !—there are also two priests, brothers, whom I found drinking a decoction of dried herb instead of tea. I felt angry with the toion, who had let slip eight dogs intended for me, and declined entering his dwelling, the strongest mark of displeasure which can be shown to these simple people. The poor fellow felt the slight so severely as he saw me entering another yours, that I could not help regretting the determination I had made. To Soposhna it is thirty-five miles, which I travelled in company with the reverend pedlars, for every body here is a merchant. I made them happy by a pound of tea, a few pounds of tobacco, and a bottle of spirits. The road was very fine, and the weather had much increased in cold ; so

, that the thermometer stood at 25° , which
ever before seen in Kamtchatka above 18° .
to Morososhna, thirty miles of a good road.
t-named village may be termed large, con-
eighteen dwellings and a hundred inhabi-
the enjoyment of many luxuries, yet with-
le. Thence the road lay along the foot of
mountains, the scenery of which gives a relief
ye, as it is, in general, uninteresting all the
from Bolcheretzk, except at a few places.
The road to Belagolofsk ostrog, thirty-five
got twice upset into the river, without the
of drying or changing my clothes, and suf-
ficient, in consequence, in my feet. I had a
view of the magnificent Itchinskaya sopka, or
mountain, which continued visible until I reached
Zovva, forty miles, the road to which is in
good, though there are some parts dan-
gerous in the night-time. The ice, from the rapidity
of the current, frequently sunk under us; but, from
the rapidity of movement, no accident happened.
At midnight I continued on for Kovranskoy
twenty-two miles. There is a law in Kamt-
chatka obliging the toions to have a path made
within twenty-four hours after every snow storm.
If he had failed in his duty in this particular,
he subsequently was obliged to go before upon
snow shoes; and such was his diligence, from
reprehension, that he not only arrived be-
fore, but arrived in five hours, a very short time
to accomplish such a journey upon snow shoes. I
saw the most miserable place I had seen for a
long period, reminding me of Zashiversk in nor-
thern Siberia. The brows of the hills are covered
with larch-wood, with little other appearance of

*From hence to Uskolofskoy ostrog are
five miles, which I was obliged to do by*

walking and alternately driving a narte, and can not say which of the two is the most fatiguing. The diseases prevalent in the place prevented almost any assistance being rendered us. There are no cattle, yet fine meadow lands. Fish and game are abundant. At this place I met with another old shipmate, in the person of the brandy contractor, who accompanied me to the next station, Napanas, a village with six dwellings and forty people. The road leading to it is considered dangerous, owing to a large tundra, or swampy desert, which must be crossed : the distance is forty miles. We passed the desert in a slight fall of snow, which had not been sufficient to obliterate the marks of the track, else we must have been compelled to halt whenever the snow overtook us. I did not arrive until two o'clock in the morning, having been previously hurled down a snowy declivity of one hundred feet in depth : at the bottom of which, I, guide, dogs, and narte, all lay huddled together ; however vexed I felt inclined to be, I could not help laughing. The guide could hardly have intended a performance of the kind, which might have caused serious consequences. It is true, he was a little in liquor, but that was my fault rather than his.

The velocity and facility with which we had descended the declivity, was more than equalled by the difficulty we had in ascending from it. To drag me and the narte from the abyss, required all the dogs of the other vehicles, as well as the help of all the drivers, yet we succeeded at length ; when, upon replacing the baggage, my pocket-book, containing passports and other papers relative to my journey, was missing ; this, though perhaps an imaginary evil, would have been severely felt by me. For a long time we searched in vain, turning ~~we~~

7, and, at last, I gave it up for lost. Such never did, nor probably ever will, happen to a person, as the papers which formed it are not likely to be again granted. The man was the picture of despair, and vowed to die if he could only recover them, which at length effected through the exertions of the brandy he arrived thence all well, and fared heartily.

The village contains eight dwellings and an excellent inn which induced the people under his command to give me the national dance. The poor fellows were obliged to me, showing the improvements they had made upon the practice of bears, or perhaps, on that of goats. The dance consists of a variety of distortions of features and of actions, doubtless, derived from the ridiculous and customs of their ancestors. The dance of the bears is equally bad, if not worse; yet I have seen it often practised, at Yakutsk, by females who would have known better. The woman, who is the principal performer, commences the dance with her handkerchief extended by the hands, somewhat as in our own shawl dances; now used to hide her face from one, then from another, but always the object of singling out him whom she most desires as a partner. In a most unbecoming posture she approaches the favourite from the centre of the room; now dropping her head, with a penon alternately upon each breast or shoulder, her hands are employed in committing out-of-door decorum. The man, having taken hold of her handkerchief, joins the dance; the woman instantly affecting to quit, appears again as if to rejoin him; this sort of antic motion is continued, till, at length, the woman sinks, as from exhaustion, upon her knees, and in the act of falling,

is dexterously recovered by the man; and thus the dance closes. The agility and imitative powers of these wild Asiatics are really surprising; and I make no doubt, that, were they to have an opportunity of seeing the modern improvement in the art of dancing, as *exhibited* now-a-days in various public theatres, they would be found capable of imitating, not only *bears* and *goats*, but *geese* also.

From Napanas I proceeded down the river of its own name to its junction with the Tygilek; having previously sent the Cossack, with the post and my baggage, straight on to the fortress. I reached the haven, where the brig Paul was laid up in the ice, with her lower rigging over the mast-head, I suppose to become frost-bitten. She belongs to the government, and makes *one voyage annually to Okotsk*, with bread, stores, &c.; carrying back the furs which have been collected. A brig, of one hundred and twenty tons, is thus kept in commission to carry bread, for a few people, a distance of three hundred miles. Its commander, officers, and about twenty-five people, paid and fed the whole year! I never knew a more shameful instance of inconsiderateness, on the part of the officers in any place, in any country. This brig, on an average, is not more than fifteen days at sea in the course of the year, and ought, if proper exertions were made, and proper encouragement given, to supply Idgiga, Tygil, and Yamsk with provisions; instead of which, each of these places keeps a similar vessel. Tolerably good barracks and store-houses have been built by the steersman, or commander, who has charge of the brig. The distance of the haven to the sea is ten miles, and below the fortress twenty; which last place I reached in time to dine with its commandant, a lieutenant

perial navy, a young man, who had held station near five years, but who will now leave it, that being the period allotted for duration in service.

stands on the river of its own name, at miles from the sea. The country round it somewhat of the picturesque during the summer, its situation in winter is exposed and

A range of mountains, from the N.E. to the S.W., defend it, in some degree, from the cold winds; yet it is, on the whole, but a poor place. There are, at present, twenty-seven dwellings, and about a hundred and fifty inhabitants, and it is denominated a fortress; formerly, it may actually have been so, but, at present, will be best appreciated for its strength, by a reference to George's Traubner; who, speaking of fortresses or castles, the latter word comprehending Siberian fortresses, says, "It would be dangerous to attempt to take them, for whoever wanted to mount the assault, and only bulwark, a wooden paling, would probably come to the ground with the whole about him." Such, I am certain, is the state of Tygil: and which, with its half-ruined walls, can only be held *in terrorem* over the neighbouring Koriaks: the Kamtchatdales are a people numerically or physically strong enough to create a disturbance.

The inhabitants of Tygil are all Russians; they have lately got the walls of a church as well as of a bell tower erected; when they are to be covered with snow, though shortly, I hope, for they are wanted. The ravages of a certain disease, at this place, are indeed dreadful, and, I should ought to call forth the attention of the government, so far as to induce them to export doc-

tors to, and import priests from, Kamtchatka. I mean no disrespect to those reverend gentlemen, but just to hint, as my opinion, that, instead of the soul only, it would be better to take care of the soul and body at the same time. The average number of people annually admitted to the hospital books, is three hundred and fifty, nearly twice its whole population, who are chiefly employed in fishing and trading with the neighbouring Koriaks or Kamtchatdales. The place also serves to keep up the winter communication with Okotsk. For the Koriaks will not furnish rein-deer or dogs to carry the post, unless they are remunerated by a present of tobacco, spirits, &c.

From what I have seen of the Koriaks, both in Tygil, and in their encampments to the southward, I have no doubt of their being of the same tribe as the Tchuktchi; they have the same features, manners, and customs, and the same language—the same love of independence, and are, in truth, less scrupulous of giving offence to the Russians than their northern neighbours, for they frequently break out in hostility with the inhabitants of Tygil, unless a supply of spirits and tobacco is sent to them, for which, however, they barter rein-deer and fur.

The climate of Tygil is cold; already had the thermometer passed 28° of Reaumur. The Cossacks, however, contrive to raise a few vegetables, as potatoes, cabbages, turnips, and radishes; but the two former never arrive at complete maturity, the one being waxy, and the other without a head. The famous antiscorbutic, cheremsha, or wild garlic, abounds; as does a small but delicious root, in flavour somewhat resembling a sweet potato, called, in the language of the country, kimtchiga. There is also an abundance of wild berries in the

hood of Tygil, yet their chief support is rein-deer, of both which I partook at the table of the commander of the fortress. After an expiration of four days I departed, having had so long to recover my feet, which had severely frost-bitten from wet.

I was accompanied by the commander of the fort lying in the haven : he was what is termed, though a droll, fellow ; and I was gratified by his society. Our route lay at first up the river, which, from its source to near the town, was through an interesting country. At midnight we reached Sedanka, a small village, containing a few huts. From thence to Bolcheretzk is called the Tygil coast, which, generally speaking, is flat, the sea-coast being from thirty to forty miles from the mountains. The villages through which we had come, were all of them upon the banks of small streams, which, in most cases, rise from the mountains ; but sometimes they emanate from lakes, which are numerous. The rivers are apprehended to be more than the melting of snow and rain which descend from the eternally snow-capped peaks. The quantity of horned cattle on the coast is so small as not to merit notice, but the pastures are extensive, and fertile enough to feed millions.

At Sedanka we procured dogs to enable us to ascend the mountains to the next station, a distance of a hundred miles. Early in the morning we left the camp of the Koriaks, and continued our journey along the Sedanka river for forty miles, when we reached the Rasoshna. We encamped for the night in the snow, placing ourselves between the fire and the wind ; we passed, on the whole, a pleasant night, although my feet were still in a bad

state, owing probably to their late want of pedestrian exercise. The following day we crossed numerous elevated lakes, and then over mountains and a well-wooded country. On our way we fell in with a caravan of eleven nartes, from the town of Cliutchie, bound to Tygil. We continued until we reached an elevated desert of ten miles long, which we crossed in a continual storm of wind and snow, called in this country *purga*; we halted in a miserable place, having come about thirty miles. I can hardly imagine how the poor dogs found their way, or how they managed to drag us along. There are times when these *purgas* are so tremendous, that mountains of snow are levelled, immense valleys filled, whirlpools formed of snow not only stopping the farther progress of the traveller, but absolutely burying him and his dogs: nothing can exceed the devastation, or be compared to it, but the effects of the wind on sandy deserts or mountains. I have known instances of people detained for twenty and thirty days in this tremendous pass; and it is seldom that it is crossed without a gale. And yet all this difficulty and danger might be obviated, simply by the erection of crosses or mounds, as in the northern parts of Siberia, where I have seen in the distance of thirty or forty miles, a small mound of earth, with a white and black chequered cross, placed at every one hundred and fifty yards.

The night was exceedingly cold, and the snow and wind prevented our even enjoying the luxury of a cup of tea, for no fire could be lighted. Crossing a second tundra, desert, of seven miles wide, with infinite labour to the dogs as well as ourselves, we entered upon a most magnificent country. Lofty, straight, and stout firs lined the right of the valley, while the dwarfish larch, and alder,

mixed with birch, stood upon the left in all their bandied and crooked shapes. The contrast was extremely pleasing, as we glided along the milky valleys at a rapid rate. Immediately upon clearing the desert, the snow and wind ceased, and we hailed the return of fine cold weather. Not long after, we overtook a caravan of nartes in great distress, having been detained ten days in the mountains by the weather. The dogs had been without food for three days, and were, from fatigue, evidently in the last stage. In the early part of the evening we reached the Yelofka river, which unites not far hence with the Kamtchatka, running in a picturesque manner through the country. At seven we reached the ostrog of Yelofka, fortunate in having crossed the mountains so safely.

Yelofka is a pleasant village of eight dwellings and forty-six people; the country round it is elevated and well wooded. We remained only a few hours to refresh ourselves, and then continued the journey along the river of its own name, the banks of which afford some beautiful scenery for about fifteen miles. We then came to a desert, which we crossed in a purga, fortunately not very heavy. At forty miles we reached the village of Khartchina, of five dwellings and thirty inhabitants. I was welcomed to it by a respectable-looking old man, a priest, son to the highly eulogized priest of Paratounka. The son perfectly well remembered Captains Cook and Clerk; he having been, at that time, a young man, living with his father at the village of Paratounka. Several uninteresting anecdotes were related of them, as also of Perouse, in their rambles, of shooting or chasing the wild animals. I had at Yakutsk been recalled to the remembrance of Captain Cook, by a silver watch,

which now belongs to Captain Minitsky, of the Russian navy, and which, I think, is spoken of somewhere, as having been given away by that great navigator, to some individual merchant. He probably disposed of it, and thus at last it has fallen into the hands of the present holder, who, though I feel assured he appreciates it highly, yet would not retain it, should relations, or others more nearly concerned, express a desire to be possessed of so valuable a memorial.

From Khartchina the route lies over a large lake, and thence over a fine open country, abounding with some of the finest fir-trees I have ever seen, reaching to the height of sixty and eighty feet. At twenty miles we reached the ostrog of Kamenny, on the right bank of the Kamtchatka, and, changing dogs, proceeded twelve miles farther to Kamakie, over numerous lakes near the river. The country here abounds with red foxes, and is certainly one of the most picturesque parts of the peninsula. The beautiful view of the sopka, or peak, of Cliutchie, was hid in the clouds. I moved on towards Nishney Kamtchatsk, also an ancient capital in the peninsula, a far more eligible place than the present site. The weather had now become very mild, no less than 3° of heat of Reaumur. We made good about seven miles of our journey, through very deep snow, by the ensuing morning. For three hours we did not move forward more than one mile. A heavy fall of snow had taken place, and it was found impossible to proceed, owing to the extraordinary heat of the weather. No track or scent offered to the dogs, otherwise I would have persisted in the prosecution of my journey. The drivers, however, with snow shoes, actually sunk eighteen inches deep in the snow, and I was

re compelled to return. We soon regained
rog we had left, and there we passed the
ritnessing such a scene of riot and drunken-
is quite beyond my pen to describe. Had
een for the previous knowledge of the cha-
f the Kamtchatdales which I entertained,
inoffensive although boisterous conduct, I
have feared some unhappy result. My com-
had parted with a few bottles of spirits un-
ted, which, when they had operated, indu-
again to launch out adulterated spirits, re-
of course, a sable for each bottle. I was
hly convinced, from this circumstance, that
atka should not be supplied with spirits.
mortified at not visiting the town of Nish-
mtchatsk, and its port; but may say that
er contains twenty-two dwellings and one
l and fifty inhabitants, and the latter an
le port, but much feared for want of be-
uented. Formerly, when the seat of go-
nt was held there, vessels annually went to
r and St Paul's for provisions; but this is
longer the case. Timber abounds in such
es, and of such a quality, as should induce
ernment to fell and to export it to the pre-
ital, where it is much wanted. I reached
ie at midnight, having come over a few
d a half-frozen river. Cliutchie is a Russian
s' village, containing one hundred and eighty
nts. It is pleasantly situated upon the right
the Kamtchatka, at the foot of the eastern
tion of the lofty peak, which is not far from
is peak is said to be the most elevated in
insula, being about fifteen thousand feet
he level of the sea. It has frequently emit-
es, lava, and dust; but its summit was not

visible during my stay in this respectable village of Christians. After the grand eruption which I had witnessed in the island of St Vincent's, in 1812, I could feel no regret at not being able to see one in Kamtchatka. It is true that little or no mischief arises from the volcanoes of this peninsula, and they may therefore be more innocently and placidly seen and contemplated.

The amount of tribute paid by the peasants is about ten shillings—formerly it was twenty, being reduced one half at the time the Kamtchatdale yasack was reduced from two to one sable. The country is in every respect most luxuriant and beautiful; and were there a sufficiency of inhabitants, as well as of horned cattle, it would no doubt make one of the most desirable abodes in the world: certainly an abode I should rejoice to have within my reach, although separated from fortune, family, friends, and luxuries,—nay, almost denied the comforts of life: to a contemplative mind I have always deemed the necessaries of life quite sufficient, and these are eminently abundant in Kamtchatka. Wood of the first growth, fish in most abundant quantity, game of the finest flavour, and of various species; pastures inconsumable; a chase which yields foxes, sables, river-otters, bears, wolves, &c. of the finest specimens,—are what Cliutchie has to boast. Vegetables are raised with greater facility than in any other part of the peninsula. Wild berries are very abundant, and some little rye flour is produced, though not of so ripe a quality as to be of much use. Such are, in short, the claims of Cliutchie, that it should undoubtedly be made the capital of the peninsula; and I am only astonished *it is not so*, considering how well its central situation is adapted for that purpose. A neat church

ately been erected at the expense of the inhabitants, who are in general disliked by the chiefs and officers, owing to their resisting the payment of individual yasack, or presents. This is surely an enhancement of their character.

I quitted the village of Cliutchie, perfectly satisfied with the character and conduct of its inhabitants. They preserve a great tenaciousness of rights, and detestation of the injustice shown and advantage taken of, their neighbours, the Russians. To prove this assertion, I need but mention that, with these Cliutchie peasants, I was obliged to pay in money for the hire of the dogs which drew me; a circumstance which had happened to me nowhere else, and therefore carries the most undoubted proof of exactions, extortions, cruelty, exercised upon the most innocent and defenceless people in the world. My route lay from Cliutchie at first over some small lakes, and then along the banks of the Kamtchatka, which at this time of the year, 14th December, O.S., is but frozen. At twenty-five miles I reached the village called Krestova, having three yourtes and twenty-four inhabitants, nearly all of whom are afflicted by disease. I continued on with the same route to Oushkielova, thirty miles further, having twenty habitations and twenty individuals, most of whom are also debilitated; indeed, it is extraordinary what havoc the introduction of the small-pox, another distemper, made at the ostrogs on the shores of the Kamtchatka. Remarkably fine and fertile meadow lands attended the traveller all the way from Cliutchie to Kozeroofsky, as well as extensive forests of timber; and there are seasons when cattle might maintain themselves during the whole of the winter, the snow being then of no great

depth; yet there are but few heads of these necessary animals. The scenery to the southward, along the banks of the river, is also of the most picturesque and sublime appearance. The magnificent peak, soaring to the clouds, has a fine effect when viewed from the bed of the river.

Kozerofsky, forty miles beyond Oushkielova, contains five dwellings and thirty-six people, and is pleasantly situated. I continued along the river Kamtchatka for twelve miles, and then along that of the Tolbatchinsk, to an ostrog of the same name, for thirty miles more. The latter part of the journey was through a crowded forest, and a thick fog, which occasioned me some serious blows, as the dogs made their rapid progress, now and then starting at the scent of a fox or sable. Tolbatchinsk is a pretty little village with thirty inhabitants, and appears to be on the improvement; the establishment is a new one, and almost secluded from the world. Stchappinat was the next village I came to. It is upon the Kamtchatka, at a deep and narrow part of the river, which was not yet frozen enough to bear the uartes. I crossed two other small rivers by bridges for that reason. The scenery was very beautiful; a lofty range of mountains lay to the east, with a good deal of fine timber, while the flat country is one fine uninterrupted meadow, without a single cow to feed upon it. Stchappinat has seven dwellings and fifty-two inhabitants, and, it is said, the finest fish in the peninsula, though but few are actually procured from it. They are considered so delicious, that the inhabitants send them to the seat of government as presents to the chiefs and officers. The causes of their comparative scarcity are probably the depth and rapidity of the river, as well as the smallness

lets ; for unless the river be actually swarming with fish, it is seldom that the inhabitants can provide themselves with a sufficient supply, so little are they instructed in those arts which alone can insure their preservation.

Massura are forty miles of a well-wooded country, and fine meadows upon the banks of the river.

I almost flew the distance, being scarcely weary in performing it. There are ten dwellings and sixty people, civil and hospitable to a stranger. A considerable quantity of cattle are in the neighbourhood, feeding on a rich pasture, which I saw at Kirgannick, twenty-five miles further, I got sight of the magnificent mountain scenery overhanging Verchney Kamtchatsk. One (peak) is especially remarkable. Milkova, a Russian peasant village, ten miles distant, consists of fifteen houses, and one hundred and twenty inhabitants, received me next; a neat place, abundant in cattle, if thirty or forty of them may constitute an abundance. There are, however, no animals for the chase. A handsome church has of late been erected under the auspices of Captain Godeffroy, the second in command of the peninsula, to whom I found expecting my arrival, with friendship and preparation of comfort which Kamtchatka may be said to boast, viz. a cup of glass of punch, and a pipe of tobacco. Having received these, I continued for Verchney Kamtchatsk, also a peasant village; but was obliged to return, owing to the inefficiency of the boat, although distant only eight miles. I at length found it much fatigued, having come through a narrow place called Stchegatchik, where some Cosaks are stationed to take care of a few heads of cattle, and four or five horses, which be-

long to the government. The situation is beautiful, on a branch of the Kamtchatka, which makes a semicircular indentation into the land, just opposite to Verchney Kamtchatsk, forming an island opposite to the junction of the Gatchick and Milkova.

I procured fresh dogs at Verchney, a place on the decline, and proceeded towards Cherom, twenty miles, situated in one of the most romantic and enchanting valleys in the peninsula. I there met with the ispravnick and eighteen nartes, engaged for the collection of the yasacks, public and private; as well as for trade. I felt gratified to meet them, as I received good news of my affairs at the seat of government; and learnt also that there was a road before me to cross the desert, lying towards Mal-ka. The ispravnick had been detained fourteen days in a storm, and he and all the party, men and dogs, were nearly perishing of hunger, having partaken of nothing but youkola (dried fish) for five days. Having exchanged dogs with another narte, I continued on for Poustchin, twenty miles, and arrived before noon. The toion and I had a difference of opinion which I shall ever regret, as it arose from my ignorance of the proper character of the Kamtchatdales. The poor man had heard of my coming, and had actually provided a good dinner for me, which I did not partake of, in consequence of his not inviting me. Another poor man actually did invite me, and I entered his more humble dwelling. The toion was much surprised, and more vexed, at this slight, which tended to lower him in the opinion of his subjects. The fact proved to be, that the toion is really one of the oldest Kamtchatdales, and was only complying with the ancient custom of the country, which is *not to invite a stranger into his dwelling, consider-*

ing that such stranger has the right not only to take it, but even to eject its owners. I left him with great regret that I could not stay another day to make him amends ; I did, nowever, all I could, with this view.

Ganal, forty-five miles from Poustchin, a romantic country, we passed in high glee at the near prospect of finishing my journey. The elevated ranges of mountains which form the Ganal Valley have all flat summits. To the valley succeeds a level plain, very subject to storms and heavy falls of snow. I reached the place at nine in the evening. The inhabitants, amounting to thirty-two, live in four yourtes, and are all afflicted with the disease so common to the peninsula ; and the contagion and want of medicine have been so great, that even the children are equally afflicted, and the complaint of scrofula is become hereditary. In this part of the peninsula the chase is scarce, and the inhabitants mostly subsist upon fish ; a few mountain-sheep, and wild rein-deer, being the only meat they taste from one end of the year to the other. The situation is fine, and highly productive in fish ; but at this moment there is not a sufficiency of people to transact the ordinary business ; a circumstance which calls aloud for the compassion of the chief.

From Ganal to Malka are thirty miles, the first ten of which are over a sterile, mountainous country, which is more than compensated by the succeeding richness of a valley eighteen miles in length. I crossed several times the Bistra, a rapid stream, uniting with the Bolshaya Reka, and was again obliged to become pilot, chief, and dog-master ; however, I managed very well, and arrived early. Malka is deserving of little notice, yet is

said to be celebrated for its baths ! The situation is magnificently grand ; the hospital stands in the bosom of a lofty chain of elevated mountains, at two miles from the village. I was welcomed by two old acquaintances, both of whom are doctors. Having refreshed myself, I proceeded to examine the hospitals and baths, all of which I found in a disgraceful state of filthiness and decay. There are two hospitals ; one for the Kamtchatdales, and a smaller one for the accommodation of the officers. There are also two baths, both ill contrived, and in want of every necessary and convenience which persons who have recourse to them require. The hospitals are without medicines, and the baths without flannel gowns, blankets, sheets, or towels ; nor is there even a warm passage for the patient from the bath to the hospital ; he must come from a place where the atmosphere is equal to 25° of heat, and pass through a current of air where there may be 15° or 20° of frost. There never was a place where more could and ought to be, or where so little has been done, for the benefit of so wretched a people. The late chief doctor was five years in the command of this hospital, during which period he did nothing but keep his patients increasing in disease ; indeed, it may be considered a fortunate circumstance for the Kamtchatdales, that the governor was obliged to send him as surgeon of Captain Vassilieff's ship, in lieu of the proper surgeon, who remained behind at sick quarters. Not even the most common vegetables have been raised ; and but for a few cows, the benevolent present of Captain Rikord, the chief, I hardly know what there would be of the really useful for this establishment, which certainly owes nothing either

the industry or humanity of the doctor before alluded to.

The state of some of those miserable creatures whom I saw in the hospital, was such as absolutely to prevent the doctor from dressing their wounds ; of course, I am incapable of describing them. They are allowed by the Emperor one pound of bread and half a pound of meat per day. They have also fish in abundance ; and wild berries are to be found everywhere round the place. The patients, being all afflicted with one disease, are cramped up into one small space, never to go out but at their own desire, nor do any work, though they might raise an unlimited quantity of vegetables from the grounds covered with the warm vapour. In short, instead of being, as it is, a place calculated to engender and nourish disease almost to pestilence, it might be, at a trifling expense, and with proper care on the part of the head doctor, one of the most humane and efficient establishments on the face of the globe.

With respect to the nature and quality of the baths, they had a strong smell of sulphur, and an unpleasant taste. The hot and cold springs are used at the baths, and it is a strange circumstance, that the one should always be boiling hot in 25° of heat, while the other, at 30° of heat, is always below the freezing point. These were the only remarks I made on my short stay, in the month of December, which enabled me to make. I should, however, in addition observe, that the present head doctor, if it be Gramatin, who was my shipmate in the *Urt* from Okotsk, is a man of great talents, industry, and industry ; and had, previous to leaving the peninsula, seven months after my departure and visit to the hospital, cleared the place

of three-fourths of the patients, and sent them to their homes quite cured. He had no remedy but surgical operations, and succeeded in first putting the patient to sleep, and then cutting out all the afflicted parts. To the truth of this statement, extraordinary as it will doubtless appear in Russia, I beg leave to add the attestation of Dr Zaerzerfskey, who was with me at the hospital at the time to which I allude. Dr Gramatin is also celebrated as a poet; some of his invocations to the Muses have already found their way from Kamtchatka to St Petersburg.

My route from Malka to St Peter and St Paul's was over a highly picturesque valley, and in beautiful weather. I soon reached Nachikin and Keraki, and, changing dogs, proceeded very pleasantly, till midnight damped our satisfaction a little with a fall of snow. We halted to refresh the dogs, and lay down till the peep of dawn enabled us to proceed, and we reached Avatcha by noon. But no dogs were to be procured there except three, which carried my little baggage; I therefore proceeded on foot, and reached the haven at about three o'clock. My entry, alone and unperceived, was widely different from my departure:—my sensations were correspondent. In melancholy mood, leaving my betrothed for the sake of wandering over a long and painful journey; returning delighted to have done so before I should be made most happy, by finding that betrothed true, and all that I could desire,—but no more of this.

Having thus completed the tour of the Peninsula, it will be proper in this place to enter on its description, with that of its inhabitants, their manners, customs, &c.

CHAPTER II.

General Observations on the Peninsula of Kamtchatka.

KAMTCHATKA is a large peninsula of an elliptical figure, extending from the latitude of 59° to 61° N.; the breadth is inconsiderable. A magnificent chain of mountains, with numerous sopkas or peaks, extend from north to south, the whole length of the peninsula; from which mountains numerous rivers, large and small, find their way into the ocean. Of these the Kamtchatka is the only navigable one, admitting vessels of one hundred tons as far as one hundred and fifty miles up the stream. All the rivers are, however, crowded with fish of superior flavour. There are also lakes of considerable size, and so numerous, that all intercourse between the several parts of the peninsula during spring, summer, and autumn, effectually excluded.

The productions of the country are few, but valuable. There is an abundance of wood, as fit for building as for general use. The finest timber is found on the banks of the Kamtchatka, Yeso, and eastern coast; but the climate is such as to induce me to believe that neither corn nor vegetables will ever attain to great perfection, the ground, all seasons, at the depth of twenty-four to thirty inches, being frozen. Potatoes never ripen,

cabbages never come to a head, and peas only flower; but turnips and radishes thrive amazingly. Grass of the most nutritious quality is found in the greatest abundance, as well in the numerous meadows as in the forests. It grows to the height of between five and six feet, and in some places three crops are produced within the year.

Winter may be said to occupy near one half of the year,—spring and summer the other half. The winters are mild when compared to those of Siberia; the thermometer never descending, in the southern parts of the peninsula, below 20° of Reaumur, and seldom below 12° and 15° . Spring is the most agreeable time, just when the leaves put forth, and it is then the fishing commences. The summer is the most disagreeable portion of the year, owing to the heavy rains and heavier fogs which come from the eternally snow-clad mountains. The greatest heat is in July, when the thermometer is at 27° and 28° of Reaumur. The snow lying upon the ground seven and eight months, will sufficiently account for the want of cultivation; but, indeed, the remaining four can hardly be considered as equal to more than two months in other places; for the sun at St Peter and St Paul's has no effect upon the earth during more than four hours of the day; and, from the immense height of the mountains, it is only from ten o'clock until two that any heat is felt.

This absence of heat, and these changes of climate, with the very heavy fogs, which account for the sterility of the soil, operate also to prevent the inhabitants from laying in a sufficient store of winter provisions, which, as they consist of fish, are exposed to the air to dry, and in a short time become so rotten and maggoty, that but a small quantity

made serviceable for the consumption of the ; the rest is retained for the dogs. Salt is sent issued, but not in sufficient quantities ; that article more liberally distributed, the might in some years prepare fish to last several successive ones. From the quantity applied by the king of the Sandwich islands, to be hoped that the first productive season is taken advantage of.

wild vegetables, some of which are mixed the bark of trees for the fare of the inhabitants there is an abundance in Kamtchatka, and no doubt that greens, turnips, and radishes, with a little trouble, be everywhere produced. Wild berries and wild garlic abound ; the is exported to Okotsk and Yakutsk. This is one of the finest antiscorbutics known, but peculiarly offensive smell.

The principal riches of Kamtchatka may be said consist in the animals of the chase, of which is so prodigious a number, that there are not enough inhabitants to take them. The most valuable are foxes of various colours, a few sea and river otters, with an immense number of sables. Bears, wolves, rein-deer, and mountain-sheep, sometimes a few lynxes, are also to be found. A number of skins annually exported and consumed in the peninsula may be about thirty thousand of which sables and foxes form the principal part. The sables are considered at once the warmest and the coarsest known ; the foxes, however, especially the fiery red, are of the finest species. Next to these furs, the dogs of Kamtchatka may be considered as forming a great part of their riches. These faithful and useful animals are employed to hunt fish, supply the house with water, the

cattle with hay,—in short, to do all the work that horses perform in England. They are fed as circumstances may dictate, being always left to shift for themselves from June to October. They are of a coarse appearance, in shape resembling a common house-dog, but endued with great sagacity; and it is to be regretted that they are not relieved a little by the importation of horses.

Independent of fish and wild animals, the Kamtchatdales derive also a considerable benefit from the surprising quantities of geese, ducks, swans, snipes, and wild cocks. They are preserved by dipping them in water, which freezing, they will be good as long as winter continues; at other times they are salted. The ducks and snipes are most excellent: but the geese, swans, and wild sheep are considered venison, and of the most delicious kind too, by those who are termed epicures; for myself, although I have frequently partaken of them, I never could relish their flesh. The Kamtchatdales also derive great benefit from the whales, which are numerous, and which, being encountered by the kasatka, for the sake of the tongue, as is supposed, are killed and cast ashore. Upon the whole, therefore, there are no people at whose disposition Providence has placed more of the necessities of life, than the inhabitants of Kamtchatka. For their direct subsistence they have fish, flesh, and fowl, wild berries and roots in great variety and abundance, sufficient, doubtless, to maintain a large population; while for clothing, they have immense quantities of furs of the warmest and most durable kind; and for firing and building, wood is everywhere to be had in the utmost profusion. Such being the case, it becomes a matter of speculation, what could induce the aborigines to

that filthy and famished condition which ly characterised them. Was it from an over-ant population, or the want of means to possess themselves of food—such as guns, nets, and

That they had means to entrap game and a certain proportion of the inhabitants, there no doubt ; but whether sufficient for a large tion, is very questionable.

the people in general, I can only say they amiable and honest as ever. They are now shed in villages, all built in the old Russian which are clean and comfortable. During summer, or fishing season, they leave their residences for the balagans, or places which use for drying their fish. Thus the summer employed in preparing food against the winter, latter is taken up in the chase. Beyond this, kamtchatdale is still the same lazy, drunken, animal as formerly. Their ancient language forgotten, but is so far out of use, that there w who do not speak Russian. Most of the ines are baptised, and may be said to live as assians do. The number of real Kamtchat-who retain their ancient usages is small. They on the northern coasts beyond Tygil and ey Kamtchatsk. Hospitality is the most stri-eature in their character ; but they are also quished by their strict adherence to truth, and onesty is proverbial. Without being forward plain of ill treatment, they will fearlessly re-it when questioned. They are in part go-l by their own toions or chiefs, but an an-isit is made to each village by the ispravnick, ef judge, as well for the purpose of collect-oles, as of administering justice and deciding la.

Their dress is the same as formerly, that for the winter season being made of the skins of beasts; but in summer they wear nankeens, and at present there is hardly a Kamtchatdale who does not wear a shirt. The women have also adopted the Russian head-dress, the articles for which are procured from the pedlars at a most exorbitant rate. It is surprising that this people, who have now been feeling the extreme of oppression from neglect and mal-administration for one hundred and twenty years, should not have become wiser and more economical in their habits; on the contrary, one might suppose they were a people but yesterday discovered. They will part with the most valuable furs for a trifling article or a glass of spirits.

I need say nothing of their superstitions, as they are nearly at an end. They now place as much reliance upon the efforts of the priests, as they formerly did on their shamanes, with this difference only,—that to the former they give many furs, while to the latter they only gave a hearty meal.

Of laws they have but few of their own, their motto being something like that of the Chinese, “to return evil for evil, and good for good.” At present they await the arrival of the chief, of an officer, or of a commissary, with a great deal of ceremony, giving him the best lodging, and acknowledging, if I may so say, his supremacy. Formerly, it appears, they lived in a perfect state of equality and independence of each other, age and expertness in hunting alone being held in estimation or respect.

The Kamtchatdales are now supplied with culinary utensils, and every thing they can require, by the Russians; and as they live exactly in the same manner, and in the same description of houses

the latter, I need only refer my readers to an account of a Russian village ; in their outward appearance there is no difference whatever. They are a race disburdened of all care and consideration for the future, and entirely resigned to any which may await them, whether it be oppression, starvation, or disease.

In my opinion, and I speak it most sincerely, the natives have not derived much benefit from the conquest of their country by the Russians, as their conversion to Christianity has done little good, than entitled them to the name of Christians. The great number of priests and deacons (twenty-six in number) would, I presume, create an expectation of more learning and piety in this part of the world than in any other semi-barbarous places ; but really I have never seen any effects from the labours of these reverend men. Certainly there is no population corresponding to the number of ecclesiastics, as will appear on considering that the whole Kamtchatka population does not exceed, male and female, one thousand seven hundred and sixty, while their number amounts to two thousand two hundred and thirty. The number of Russians is one thousand one hundred and sixty. The inhabitants north of Ustka and Nishney Kamtchatsk, are four hundred and ninety-eight, while in the Koriak villages there are one hundred souls ; making a population of four thousand and five hundred and seventy-four, men, women, and children, Russians, Kamtchatkians, and Koriaks. Whether the original population has not been reduced in a surprising degree, is a question I cannot answer, farther than by reminding my readers that, at the discovery of Kamtchatka, we read in the Russian history, that no less than

one hundred and sixteen villages were on the banks of the river Kamtchatka. The small-pox, and its rival distemper, with other diseases, and above all, the spirit of persecution, which has been unremittingly practised towards these poor people, have been the several causes of the depopulation. Of late, however, I can with certainty say, the population has not decreased; this may be owing to the benefits arising from vaccination, as well as somewhat better medical attendants. But although population has of late kept its maximum, it may be a question whether the aborigines have not decreased in the same ratio that the Russians and convicts have increased. At present there are several Yakut as well as Russian exiles in the peninsula, neither of whom can be of much benefit; but both assisting to persecute and plunder the Kamtchatdales.

Of the history and origin of the Kamtchatdales little positive has ever been known, and that only for the last one hundred and thirty years. Kamtchatka is supposed to have been visited by some Russians in 1649, when one of the traveller Deshneff's vessels was wrecked on its coast. Those Russians lived with them in peace for a considerable period of time; but, quarrelling among themselves, were murdered. Nothing more is known of the place, until Vladimir Atlassof discovered the peninsula in his excursions from the Anadyr; from which time a constant petty warfare continued between the Russians and natives, until the general revolt and massacre in 1731. Since this period, the peninsula has not been greatly troubled with either conspiracies or massacres. Little doubt can exist that the Kamtchatdales are of Asiatic origin: of this, their features and customs, as well as their

ish size, are evident tokens. I have read dissertations upon the subject, but disagree most of them. My own opinion is formed by ocular demonstration alone, and not from a consideration of the circumstances under which they labour.

Their having progressed from America is a ridiculous idea; and their having learnt secrets, as causing fire by friction, &c. from the inhabitants of the opposite continent, is just as plausible as the other sagacious notions, that they are the teachers. How, in either case, could it pass that formerly ferocious and warlike race the Chuktschi? Or if they had come from the north, from Siberia, from Irkutsk or Yakutsk by Okotsk or Kamtsadgiga, how did they pass the still more fierce and barbarous Koriaks? The idea is absurd; and the only one I can for a moment entertain is, that they were a Mongole tribe, who were driven down the coast, and, passing along the Kurile Isles, reached Kamtchatka. A few of the same race are the inhabitants of those isles, with a dialect of the same language, originating from the Mongols; and the only difference between them and the Kamtschadales is, that they are a more manly, and consequently a more independent, race; for, of all the people at present existing, I believe the natives of the peninsula to be the most affable and hospitable; but, at the same time, the most cowardly and insensible. I never saw, in any part of the country, a people more abused, under the sanction of a proverb, now become almost a principle, "God is far off, and the Emperor far off." Their modes of fishing and hunting, and such other customs of the country as I have not noticed, are found in Cook's and other travels. I will now proceed to compare the present happiness

of the people of this peninsula, with that which they formerly enjoyed. In the first place, as to their possessions in horses and horned cattle.—It appears by the last census, that there are but one hundred and nine of the former, and nine hundred and sixty-eight of the latter, in the whole peninsula; two-thirds of which are in the hands of the Russians, and but three hundred and ninety-three head of cattle in the possession of three thousand four hundred Kamtchatdales and Koriaks. It is to be regretted that the flattering prospects held out by Captain King have not been realized. The introduction of horses and horned cattle would much tend to ameliorate the condition of the people, were they once imported upon a large scale. The dogs, like the aborigines, are on the decline, and probably twenty or thirty years more will leave nothing in Kamtchatka but the Russians and animals of the chase. When it is recollected that Kamtchatka has such magnificent and extensive meadows, and that the climate is not severe; and when it is considered with what facility government might send, each year, two or three thousand heads of young cattle, by the annual transports, to Tygil,—it may be naturally supposed that the different chiefs have been attending more to their personal concerns than to those of the peninsula. That the place might be made even to flourish, there can be no reasonable doubt.

The expenses of the colony have been very great to Russia, and must continue so, as long as the present plan is persisted in. The yasack amounts to a less sum of money than the single maintenance of a chief. Five hundred heads of foxes, or sables, worth six thousand roubles, or three hundred pounds, is the amount; while the expenses of the

cannot fall short of two hundred thousand
 roubles, or ten thousand pounds.

The depopulated state of this peninsula is also attributed to other causes. Their continual wars and insurrections greatly thinned them ; and were followed by the introduction of the small-pox, which, in the year 1768, carried off no less than six thousand persons ; and twenty thousand are supposed to have fallen victims to it within a short period. Yet at this moment there is a want of vaccinating matter ; nor is it a question of assertion, that the quality of medicines, in the peninsula, is shamefully adulterated, and the quantity small. The present worthy chief has, however, ordered an inquiry to be made upon this subject, and the result has been transmitted to government. It is not the small-pox alone that the arrival of the Russians introduced into this place ; the disorder before alluded to has made, and continues to make, the most dreadful ravages in every part of the peninsula, very few families being free from the taint, and no part of the world can show more miserable effects of its fury. The whole race, indeed, looks as if it were better qualified to extinguish than to propagate the human species ; nor is this surprising, considering their present state, almost without hospitals, medicines, or attendants, save that wretched house at Malka.

Besides these two diseases, the inhabitants of Kamtchatka are subject to all those which make common in countries where the people are ordinarily naked, ill-clothed, and liable to famine. The last vessel frequently visited this peninsula, more from a want of people than of food ; for fish is not always had upon both sides of the peninsula at the same time, and they have not the means of trans-

porting the superabundant quantity to the opposite coast.

Another great cause of this ravage in population has arisen from the introduction of spirits: a Kamtchatdale will sell his last sable or fox for a glass of it, though he is not physically strong enough to drink any thing of the kind. When it is considered that sixteen thousand bottles of this trash are consumed in the short period of three or four months, by six or seven hundred people, we may well feel pity and surprise,—pity for the poor women and children, and surprise at the means of getting either the money or sables. Such a quantity of spirit ought to sell for fifty thousand roubles, which is one hundred per cent upon the price at Okotsk; but it is, in reality, sold for twice that sum. When it is recollected that officers, soldiers, sailors, merchants, and priests, travel round the peninsula for the purpose of trade, it will be less wonderful when I assert, that each bottle of spirits sold to the Kamtchatdales, produces the value of ten and twelve shillings. Now, allowing half the quantity imported (eight thousand bottles) to be consumed by the aborigines, this would produce from eighty to one hundred thousand roubles; while the cost is, in Okotsk, only twenty-five thousand. I have seen a bottle of spirits sold for a sable, and afterwards, when the party was drunk, a bottle of adulterated liquor has fetched the same price: in short, I have seen three and even four sables given for two bottles of spirits.

Allowing seven hundred and fifty families of the Koriaks and Kamtchatdales, which is five to each family, and that half the quantity of imported spirit is consumed by them, it will appear that each family consumes, at least, twelve bottles in four

months. By this plan, the poor purchaser is drunk for days together, and for the rest of the year can get nothing to cheer him under his depression. The cost of that spirit, to the Kamtchatdales, is one hundred and fifty or two hundred roubles ; a prodigious sum for a poor family to expend upon an article so pernicious in its moral and physical effects. Such a sum of money, in Kamtchatka, would produce near six or eight hundred pounds weight of flour ; enough to support a small family during a whole year : or such a sum would enable them to purchase proper clothing, culinary utensils, nets, twine, tobacco, axes, and knives. The evil of these grog-shops is carried to so ruinous an extent, that the children of the natives are left for three and four days without any food, save youkola (dried fish), doled out to them once or twice within that time. I have known instances of mothers and children being left without any means of support, in consequence of the retailing of such trash being allowed. The youkola and the bark of trees is, in such cases, almost the only nourishment the women and children can procure for several days. If they happen to be possessed of a cow, they are considered very fortunate. It needs little philosophy to prove, that it is only by taking care of the young generation that the stock itself can be preserved, which will not long be possible, if spirit continue to be transported and retailed out as it now is.—While making these reflections in England, I am aware that the Russian government have abstained from this trade ; but this is only the worse for the Kamtchatdales, inasmuch as the pedlars demand an extra quantity, and demand a most exorbitant price for a spirit infinitely inferior : the only

effectual check is indiscriminate prohibition; a prohibition which ought also to extend to Okotsk.

The abuses arising from the collection of the yasack are most cruel. The yasack itself is inconsiderable, but, from the arbitrary manner in which it is collected, it is rendered odious and oppressive. The tribute is levied in kind, at any low or capricious valuation; and it has not unfrequently happened that the toion of a village, who does not properly compliment the chief, or other officer, upon the annual visit, has so small a price put upon his furs, in payment of their tribute, that they sustain a loss of two, three, and even four hundred per cent. I have seen sables valued at half-a-crown, for which the merchants present would have given twelve shillings. Independent of the yasack, each Kamtchatdale has to pay seventy copecs, or seven pence, as a sort of capitation or poll-tax; upon failure of which, the ispravnick may have recourse to the most arbitrary and unjust measures. Any property may be seized and sold on the moment,—such as axes, knives, nets, guns, kettles, or the clothing of the family; and it has often happened that a poor family have been ruined through the cruel and oppressive conduct of these tax-gatherers, not from a deficiency of the *legal* dues, but of *illegal* dues. The mode of taxation in each ostrog is also highly objectionable, and sometimes rendered cruel. They are not taxed as a people, but as a place; and it not unfrequently happens that the village which formerly contained forty or fifty able people, and was taxed as such, does not the following year contain more than twenty or twenty-five, in consequence of illness or removals. There is, however, no remedy; the yasack of the whole must be paid by the few. It is also not a little

singular that each ostrog is taxed in money, and yet money cannot be received: the duplicity of this act is too apparent to be mentioned, yet it would seem that the government must be unacquainted with a fact of the kind, for the difference, in the amount of the tribute, would not equal one hundred pounds. Instead of the sum of money at which each village is rated, the inhabitants are obliged to pay furs, at one-fourth the value. Sables of the finest quality, and worth forty shillings a pair, are never averaged at more than ten. It would be more honest to increase the nominal tribute of money, or put a specific tax on furs, which would be felt less severely, because an appearance of candour would accompany it.

The next galling tax is that levied for the tax-gatherer himself; and this is a greater grievance than that levied on behalf of the Emperor, and under more humiliating circumstances. Each ostrog, and each toion or chief of it, is also compelled to pay the same tribute to his actual chief as to the Emperor himself; so that the yasack is *de facto* paid at least five times over.

Nor is the impolitic system of collecting the tribute more injurious than that arising from forced or gratuitous services, such as the forwarding of the post, the transport of flour and salt, and the issuing of padvodies, or forced levies of horses or dogs, to officers and favourites. This is, indeed, an intolerable abuse, and calls loudly for redress. There can be no doubt but that, if the proprietors of dogs were rewarded at a proper time, and in a proper manner, they would as much court the employment as they now abhor it. According to the present plan, the natives lose their time, their dogs, their health, and their provisions. Any favourite

or officer, who may wish to trade, is furnished with one of these free billets, which authorizes him, upon the plea of public duty, to call out men and dogs ; while the manner of the officer or favourite seems to intimate, that he confers an obligation upon the chief of the village by his acceptance of a couple of sables as a present. Nor is this all : not content with the present, the party travelling has the privilege of trading, and buying just as many more sables as the poor aboriginal may have caught, and which are invariably sold for just such a consideration as the officer may incline to give.

If a governor or officer be compelled to travel upon public service, and if he receives from the Crown a sum of money to pay travelling expenses, it seems very strange that such money is not paid to these poor people. As little can I understand why a post should travel gratis : surely the poorest and most distant part of the Russian empire should not be oppressed in such a manner. It is true, the sum paid by the government to officers when travelling is small, as well as that paid to the postilion when in charge of the post ; but small as it is in itself, it would be acceptable to those to whom it would appear much. As to officers' travelling, for which there is no public necessity, they can at best but reap the advantages belonging to the fair trader, who is not inconsiderably taxed. I have heard an officer of high rank assert, that every voyage from Kamtchatka to Okotsk and back again was worth ten thousand roubles, or five hundred pounds ; and I believe he spoke the truth.

With respect to the pedlars, here denominated merchants, they, in truth, ought to be taxed severely, as well in regard to the goods they bring as the price at which they are sold, the articles be-

ing such as are of light burden, or will return the greatest profit. The ignorance of the aborigines is such, and their thoughtlessness of the future so great, that they prefer present luxuries to future necessities. The quantity of articles hawked about by the merchants consists of tobacco, spirits, silks, tea, sugar, nankeen, and cotton handkerchiefs. Every Kamtchatdale keeps open house, and, upon the arrival of a Russian, his door is held open, the owner standing by it uncovered, and awaiting the entry of his noble guest, who, making an obeisance to the *kasaika*, or landlady, passes on to the most comfortable part of the dwelling, and divesting himself of the unwieldy clothing so necessary in this part of the world, calls aloud for dinner or supper, as the time may be, orders food for his dogs, eats and drinks well, has a bed prepared for him, and takes breakfast, consisting of fine game, fish, and the like. The intermediate time is employed in extorting three or four hundred per cent profit for his goods, and the only remuneration to his host is a glass of spirits, or a leaf of tobacco; in some cases not even a "thank ye," although stress of weather has, unfortunately for them, detained him to partake of their hospitality for a week or more.

Were the merchants compelled to take more woollens and linens, some flour or oatmeal, with a sufficient quantity of axes, knives, kettles, twine, nets, and other implements of great necessity, there would be less objection to their proceeding round the peninsula, and less inducement for officers to do so. Tobacco, it is true, is an article of great demand as well as of great necessity; tea and sugar are also in considerable demand, though, probably, too much money is lavished upon both these

articles by the Kamtchatdales ; as also upon silks, nankeens, and fine cottons. A great benefit would arise from the establishment of a general fair in Kamtchatka, to be held at St Peter and St Paul's, as well as from two or three provincial fairs, to be held upon a certain day at certain places. Among the people who also travel round the peninsula of Kamtchatka, are doctors and parsons. They are both extremely troublesome : for while the one affects to prepare the soul, and the other the body, both, I believe, are more concerned in fleecing the thoughtless aboriginal, and in depriving him of the means of support.

The quantity of convicts sent amongst a people so susceptible of imposition, is also a serious grievance. The convicts, as Russians, have an indirect ascendancy over the Kamtchatdales, which is exercised in a most intolerant and infamous manner. The convicts frequently desert, and commit every species of villainy and outrage, even to the fomenting of insurrections. This was the case during my stay in the peninsula ; nor are the Kamtchatdales so dull, but that they remember Count Benjofsky with horror. If the government of Russia really feel interested in the prosperity of Kamtchatka, and I do not doubt it, they have an easy mode of effecting it, by transplanting thither two or three thousand Yakuti, with their cattle. They are an industrious, ingenious, and peaceable people ; and, being excellent herdsmen, they could not, of course, but thrive in a country of such extensive and rich pastures.

I cannot refrain from mentioning what appears to me a most desirable plan of administering a direct, and yet inexpensive, relief to these poor people :—Let the yasack be totally abolished, and

let each family of the aborigines be compelled to take from the government one pood of flour per month, at the price, say, of a sable or fox-skin. The result would be, that government would issue an extra six thousand poods of flour, at an expense of sixty thousand roubles ; in return for which they would receive six thousand skins, worth at least ninety thousand roubles ; leaving a gross profit of four times the price of the present yasack, and actually assisting the Kamtchatdales by the abandonment of a direct tax of half the amount—to say nothing of the benefits which would accrue from such a measure to the females and children, who are now left for many days without tasting any other food than bad fish, or the bark of trees. I do not know what effect a poll-tax may have upon the animal frame, but it appears to be no incitement to procreation. In Kamtchatka it is the same as in Mexico ; a single man pays a heavy tax, a married man a heavier, and a father the heaviest of all. Such conduct is bad policy on the part of government, and carries with it more the appearance of a wish to extinguish than to increase the population of Siberia.

I have already commented upon the evil effects arising from forced levies and forced services ; of the transport of flour, salt, spirits, the post, as well as officers, from one place to another, without any remuneration to the inhabitants. Of the conduct of these travelling gentlemen, high and low, it will be sufficient to give a specimen. The officer, upon arriving at a village, is received by the toion, or chief, and conducted to the warmest and cleanest part of the yourta. His upper garments are taken from him, cleared of the snow, and put out in the open air for the night ; it being understood that

the colder the dress is put on in a cold country, the warmer it ultimately becomes. The landlady, or *toionsha*, is also engaged in scraping the boots of the travellers, to prevent the heat of the room from melting the snow which adheres to them. The best provisions are then got ready as fast as possible, either for dinner or supper, as the time may suit. The *toion* then comes in with a reluctant smile and a pair of handsome sables, and, bowing to the officer, places them upon the table for his acceptance. Dinner being at length served up, the officer may be considerate enough to give the *toion* a glass of spirits, as also to permit the family to partake of the tea-leavings. Having finished his dinner, the officer asks the *toion* if the chase has been good, and how many sables he has got.—probably two, four, or six,—which he accordingly takes for as many handkerchiefs, pieces of nankeen, pounds of tobacco, or a small quantity of tea and sugar. The dogs of the village are at last ordered out, and the officer departs, in perfect complacency with his conduct and condescending demeanour.

I have never been able to ascertain the exact number of animals annually caught in the peninsula, but suppose they cannot fall short of thirty thousand, worth at least two hundred thousand roubles. One out of every forty is supposed to be paid to the Emperor upon their arrival at *Okotak*; but it is very difficult to insure any payment of such a tax, except from the regular traders, and they also manage to defraud the government of the proper dues. The value of the furs varies; a sea-otter, is worth thirty-five pounds; a river otter, two pounds; a black fox, twenty pounds; black and white fox, ten pounds; brown fox, two

pounds ; a common fox, twelve shillings ; and a white or blue fox, as little as two shillings and sixpence ; sables vary from eight to twelve shillings. For these bread is bartered at eight shillings the pood ; tea at twelve shillings the pound ; sugar four shillings, and tobacco three shillings, the pound. In short, no article is sold for less than four hundred per cent profit upon the actual expense of fetching it from Canton ; with the advantage, in that case, of procuring all sorts of coarse cottons, nankeens, and handkerchiefs, besides iron utensils.

The American Company might, and ought to contract with the government for supplying flour to Okotsk, Idgiga, and Kamtchatka, for which about forty thousand poods are annually required. Their abundance of unemployed vessels would also enable them to furnish the aborigines with every thing they require, at a cheap, and yet a profitable rate. But such is the pertinacity and jealousy of those composing that body, that they will do nothing, even to benefit themselves, if it be also of benefit to others ; and thus a trade with Manilla, Canton, the South Sea islands, California, Calcutta, and Japan, as well as the establishment of a whale fishery, are sacrificed ; and the eastern frontiers of the Russian empire, remain in their original barren, impoverished, and savage state, instead of boasting of a flourishing trade, carried on by a civilized, organized, and friendly population. The produce of the above mentioned places might be warehoused in Kamtchatka, and in the ensuing summer be transported to Okotsk, and thence over all Siberia.

The drying and salting of fish, the felling of timber for furniture, and the countenancing of agricultural pursuits, could not fail of benefiting Kamtchatka ; but the whale fishery would, above all

things, redound to the honour and interest of Russia. It may not be amiss to add, that the importation of foreign corn would much assist the Yakuti; its immediate effect would be to save the lives of twenty thousand horses, which are annually sacrificed by hard work or famine. Formerly, when the horses were more numerous, from eighty to one hundred thousand were annually employed between Okotsk and Yakutsk by the merchants, the American Company, and the government; at present, there are not more than thirty thousand. Of these at least one half are sacrificed, and the remainder rendered unfit for a second trip. The whole number of horses annually sacrificed in Siberia does not, it is said, fall short of fifty thousand; so that, ere long, they will also be extinct, and, with them, the very being of the Yakuti, who are even now going down in an equal ratio.

Much benefit has been derived to the colony from the exertions of the present chief, Captain Rikord. The rule of never allowing a cow to be killed until she is past calving, is in itself excellent; but the stock on hand is so small that a century would elapse before what can be termed herds of cattle could be seen wandering and feasting upon the almost unbounded pastures of the peninsula. What the different chiefs have been doing for the last fifty years, Heaven alone knows! When Captains King and Clarke were here, they seem to have taken it for granted, or to have been informed, that cattle of all descriptions were in a flourishing state. From the proximity of Okotsk to Tygil, a couple of transports might, in one summer, transport at least one thousand head of cattle, which, repeated for ten years, would place the peninsula in an absolutely enviable situation. This act of humanity

d be attended with no expense to the government; on the contrary, it might be made advantageous to the government as well as the Kamtchales, who would willingly pay the value in skins, and the result would be, that no part of the Russian empire would be richer, or better provided with food of various descriptions, than the present province of Kamtchatka.

Even on the banks of the Kamtchatka, where the soil lies distant from the salt water, and sheltered by the mountains from the east winds, as well as on those banks which have been enriched by the eruptions emitted by the volcanoes,—barley, oats, and wheat have been produced; but, in no instance, with much success as to pay the labour. The productions, it is true, have been a little more varied, a little riper, but rarely consumable. In spite of this fact, the gazettes of St Petersburg formally and officially announce this year, that a quarter of wheat produced nine quarters, and that the size of a common potatoe was three quarters of an ounce. Three quarters of an ounce would be a sufficient tax upon credulity. I have no hesitation in saying, that both these reports are fabulous in every sense of the word, for I have never seen a potatoe in the whole province either ripe, or larger than a hen's egg.

Large herds of cattle were distributed on the banks of the Kamtchatka, and other favoured spots, with the benefit of manure, agricultural improvements, and knowledge, no doubt the soil might be made to answer the purpose. I certainly cannot conceive the climate of Kamtchatka to be such in itself, to preclude the pursuit of agriculture in any one of its minor branches, as I consider the soil

no enclosure is to be found upon the

Before entirely closing these rem
Kamtchatka and its grievances, I r
to one or two points not hitherto
children of the natives receive no
the children of the Russians but litt
certainly is a school existing in S
Paul's governed by a priest and

precept. They are very numerous ; I know not what so many do in so poor a place, there being no congregations to employ so great a number. The revenue received by these reverend gentlemen is far from inconsiderable, and, although it is done under the disguise of voluntary contribution, still it presses heavy upon the people ; and heavier still, when it is considered that they do little work of any kind besides trade. Surely their capacities are such that they are qualified to become schoolmasters ; yet never but in one instance have I seen moral or intellectual instruction given to the children, and, in that instance, the party was paid. I do not know how laborious the duty of a Russian priest may be in a large congregation, or whether it is the same as in a small one ; but this I do know, that in such a place as Kamtchatka, they do not occupy themselves for the benefit of the public three hours in twenty-four ; the remaining twenty-one are occupied (besides sleeping) in trading, hunting, &c. Of late the Emperor has given them an allowance of flour as well as a regular salary, and it may therefore be hoped that the natives will, at least, be so far benefited as to have fewer of their visits, except on their spiritual concerns.

Whether the Russian government will pay any attention to the serious and deplorable situation of the peninsula of Kamtchatka is of no personal consequence to me, though I may well feel a strong interest concerning a place in which I resided for more than a year, and where I married. The ceremony was attended with much more pomp and parade than if it had been celebrated in England. It took place on the 8th of January ; and I certainly am the first Englishman that ever married a Kamtchatdale, and my wife is undoubtedly the

first native of that peninsula that every visited happy Britain.

The winter was passed in a constant round of hospitality and comfort, and hardly any thing remarkable occurred to call for observation. Three shocks of earthquakes were felt, two of them very severe ; one threw the sand up from the banks of the river Kamtchatka, and quite annihilated the snow ; the Cliutchefska sopka also emitted flames and lava. The snow began to disappear at St Peter and St Paul's in the beginning of May. By the middle of the month one of the transports sailed from the port to Nishney Kamtchatsk, reaching it in five days ; and, by the latter end of May, the snow had entirely disappeared, and spring, in the course of a few days, made her welcome appearance ; wild flowers and vegetables were every where springing up, and enlivening the dreariness of the last seven months. Even the rigging of the transport which was to carry me back, excited my interest, and reminded me of former times. The attention of the inhabitants was sufficiently engaged by the accession of fish, as herrings in the inner harbour, cod in the outer haven, and seals every where. Some among them proceeded to the islands at the mouth of the haven, and brought in some thousands of eggs ; while others were out on shooting parties, sending us in snipes, wild ducks, and partridges. The wild garlick made its first appearance at Cape Garlick so early as the 15th of May.

Only a few individuals died in the hospital, most of them with the scurvy ; the remainder were soon restored to sound health by spring and fresh fish. Our evening walks were sometimes extended to the summits of the hills, where we took our va-

smoked a cigar; but latterly the little place—I cannot call it a town—became overflowed from the melting of the snow, and it was with difficulty we could move about. In the month of June a vessel arrived from Canton and Manilla, in ballast, having failed in procuring a cargo of flour. By that vessel I received a most friendly letter from Mr Urmston, the chief of the British factory, together with a file of English newspapers, magazines, &c. which employed me till the 1st of July, when we were ready to sail.

St Peter and St Paul's, the chief city of the peninsula of Kamtchatka, contains forty-two dwellings, besides fifteen edifices belonging to the government, an old church, and the foundation of a new one. Among the public buildings are to be reckoned magazines for bread, for powder, for sailors, for convicts, for wine, and for arms; a guard-house, smithy, hospital, chancery school, and a building for the chief and his assistant. All, however, with the exception of the hospital, sailors' barracks, and school, are, at best, like the rest of the city, but emblems of misery and wretchedness. I have never seen, even on the banks of the Frozen Sea, so contemptible a place, hardly meriting the name of a village, much less that of a city; yet such is the place which has been so eulogized from one end of the world to the other. The erection of hospitals, of schools, of churches, and the diffusion of happiness and knowledge, have been extravagantly vaunted of in magazines and reviews, in defiance of the most lamentable facts of a very opposite description.

I cannot imagine what a governor has to do in such a place; a civil commissary would surely have been enough. The only people, in my opinion,

who can be called happy, are the Koriaks, because they are independent. The Russians complain of being sent to such a vile place, utterly destitute of society; the Creoles of their being kept in a state of poverty; while the Kamtchatdales bitterly lament the association with either the one or the other. It has been observed that St Peter and St Paul's can never be a good town, owing to its want of wood. It may be asked, why then was the seat of government removed from a more eligible place, Nishney Kamtchatsk? or why was it not removed to the centre of agriculture and population, so far as either can be said to exist? It has been already changed three times, and is, I believe, destined to another removal. Kamtchatka neither can nor will thrive so long as its chiefs are sent for five years only; such a short period scarcely allows them the time of doing good, however well disposed they may be. The general mode of occupying the allotted term, may be thus described:—The first year is employed in looking about and forming plans for the improvement of the country, the amelioration of the condition of the aborigines, &c.; the second year is passed in making reports, stating opinions, &c.; the third year brings the reply of the government, directing or authorizing the mode of administration; the fourth is employed in preparing, or at most in acting upon such orders; while the fifth and last year is generally employed in preparing to return to Europe, and levying a parting contribution; and thus the whole five years are, more or less, taking up in trading and accumulating as much money as possible. The very shortest term of a chief's command at Kamtchatka should be ten years; let him then only be liberally paid, and I will venture to say, that many suitable characters

found, who will prefer to administer justice with leniency and honour, to the degrading of their officers by a mean and derogatory traffic. If an increase of rank, double pay and provisions, an extension, and the most unlimited powers, are not sufficient to insure a just discharge of the duties, besides conscience ever can induce it?

the Kurile Islands, though they are not now under the government of Kamtchatka, having been ceded

by the emperor in property to the American Company. I shall make but a very few remarks, and then close my observations on Kamtchatka. This chain of islands is divided between the Russian and Japanese empires; of those belonging to the former empire, but few are inhabited. The Kurile, situate at sixty-five miles from Cape Kamtschatka, has three *yourtes*, with four males and six females, nominally paying as tribute six sea-otter and twelve roubles in money; but, as no sea-otters are found, and the islands abound in foxes, of these are received in lieu of them. There is on the island a tolerable roadstead for small craft on the N.W. side. Immense quantities of waterfowl, such as ducks, geese, and swans, frequent the place; from the skins and feathers the inhabitants make their parkas and all their warm clothing, which are also exceedingly comfortable and beautiful. The climate of the islands resembles that of St. Peter and St. Paul's. The soil is generally good, producing fine pastures. On the first isle there was formerly an abundance of cattle, but now only two remain.

A second island, about ninety miles from the first, has seven *yourtes*, with thirty-five males and two females, paying tribute for itself and the ninth isle, nominally, thirty-five sea-otters;

that is, twenty-three foxes, and one hundred and fifty roubles. The fourteenth isle has three yourtes, fifteen males and seventeen females. Of the intermediate islands, and those beyond the fourteenth, I could obtain but very little information; the whole are evidently volcanic productions, and are supposed to have been separated by some violent convulsion of nature from the peninsula of Kamtchatka. The islands, which are lofty and bold, are said to be without rivers, nor are there any harbours known. It is to be remembered, however, that they have been but very imperfectly surveyed. The inhabitants are supposed to be of the same origin as those of Kamtchatka, though they differ in the custom of wearing long beards, which was probably introduced among them by the Russians. Their dialect is the same with that of the inhabitants near Cape Lopatka; from whence baidares are frequently sent to the first and second isle, to bring the tribute and furs. Foxes are said to be the only animals of the chase, and here they abound in all colours. Sea-otters were also formerly taken, and still, at intervals, visit some of the islands. Excepting those caught near Nishney Kamtchatk, they are considered the most valuable of the species.

 l observations on the Yakuti, and on their Metro-
 s.

REMAINED in Kamtchatka eleven months, en-
 g that hospitality and kindness which the chief,
 ain Rikord, so eminently possesses the means
 manner of conferring. The vessel in which
 repared to return to Okotsk, was the same
 1 brought me to Kamtchatka ; but, although
 was ready in June, it was not until the 5th of
 1822, that the anchor was weighed, and, with
 it northern breeze, we bade adieu to Kamt-
 a. As we steered along shore, the coast of-
 a lively verdant appearance, no snow being
 e except on the elevated peaks. In five days
 reached the latitude of Cape Lopatka, bearing
 ten leagues. At the close of the day, when
 situated, and with a light air from the S.E.
 ky assumed an unusual fiery red, while the
 ful tinge on the dark fleeting clouds, present-

ed a most sublime aspect, though it evidently foreboded something awful. The constant changes in the appearance of the heavens over the high lands of Kamtchatka and the islands, reminded us of an Aurora Borealis, as this, as in the real Aurora, had its fiery meteors moving about. By midnight the wind veered to S.W. by W., and ultimately settled in a heavy gale from the N.W.; the last being the scene of the most glowing part of the sky. An immense cloud of smoke had also been visible for a couple of days in the N.N.W. direction. Before our arrival at Okotsk, it had been ascertained that a great part of the immense forests north of the bay of Avatcha had been destroyed, and that a severe concussion of the earth had taken place upon the day of the gale. Fortunately for us it was an off-shore wind, or our destruction would have been inevitable. During the forty-eight hours that we were lying-to under bare poles, we were driven to the S.E. about one hundred and fifty miles, owing partly to the heavy sea which drove through the Kurile passages, and partly to a strong current which continually sets to the S.E. through the Lopatka Straits. It is this current which renders the passage to and from Okotsk much more tedious than it otherwise would be. The first, or Lopatka Channel, is now seldom or never attempted, owing to the repeated accidents which have happened to the transports: indeed, there is now an order from the Admiralty to the contrary, throwing the ~~onus~~ upon the officer in charge. The channel, as far as I am able to judge, is not half so dangerous nor so narrow as that of the Needles at the Isle of Wight. The whole of this hemisphere demands a surveying expedition, as well as practical sailors to ~~traverse~~

it; for, till then, imaginary dangers will be shunned, while real ones remain unknown.

Driven to the S.E. 4° of latitude as well as of longitude, we awaited at S.E. a gale, when we were enabled, with good management, to run within a quarter of a mile of the breakers, though in the greatest danger of suffering shipwreck, which would, in such circumstances, have left no one alive to tell the dismal tale. The vessel was crowded with live lumber,—men, women, and children, all with horror depicted upon their countenances. The situation we were in was by no means pleasant. Our course was west; a heavy Kurilian fog attended us; we had already passed what appeared two islands, but which, in fact, were two hills on one island. Land was observable a-head, and we hauled up S.W., going eight knots, and the spray, at this time, from the breakers, within fifty yards of us. The gale veered to N.E.—observed the land again from S.S.W. to W.—hauled up S.S.E. land still a-head, when from a hard gale and heavy sea it fell, almost miraculously, calm, and we found ourselves in smooth water. Fourteen feet were gained by the lead, and the anchor was thrown out with success. The night proved rainy, dark, and dismal, but we held on, in perfect ignorance of our situation; latterly, even the land was not visible, though the breakers were. A small rock lay N. by E., and a reef S. by E., extending to S.W. The surf from the island extended to W.N.W., leaving us only a west course in the event of any accident to our cables. After a night of great anxiety and constant attention to the lead, the watches, or lookout, being equally divided between the commander and myself, we hailed the break of the following morn with great pleasure: a cloudless sky dis-

covered our situation to have been such, that nothing but the intervention of Providence could have saved a single life on board the vessel, if the gale had continued. We had no alternative betwixt struggling through breakers, or being dashed to pieces against rocky precipices.

The large bay into which we had been thus driven, is no where described in any chart; which is the more extraordinary, as it lies near the principal Kurile channel. It is to this hour unknown, for we did not survey it, although it has been passed within a few miles by the annual transports for the last hundred years. Our situation proved to be on the S.E. of the third island, and S. of a large bay-in the centre of it. Four small rocky isles bore from N. to N.E. $\frac{1}{2}$ N. about a mile distant; a long reef had its extreme east point E.N.E. about nine miles; the hollow in the centre of the isle bore N.N.W., and the eastern extreme of the southern shore S.E. $\frac{1}{2}$ S.; while a sunken rock and bank were, from us, S. by E. about half a mile distant; consequently the main-land ran from N.E. to S.E. round by the W. There was plenty of water for our vessel all round us: a clear channel lay round the rock to the S. by E., and another to the west of the northern reef, distant from the main-land three miles. As we had come in, there must necessarily be a passage out; and that passage I proposed as the most certain by which to get safely out. The latitude at noon was $50^{\circ} 26'$, and the proper entrance to the bay is in that latitude, between the long reef, nine miles from the brig's then station, and the islands, hauling up to the south, and thus it may be made a safe bay.

We hove short the anchor, and drove close to the breakers; let go a second anchor under foot,

length, by casting the right way, made sail away. The S.E. current, and the tardiness of the crew, were still to be borne with, as we stood parallel to the reef at fifty or sixty yards. We continued an offing, and continued to beat about the twentieth day from our leaving Avatcha : the next day we passed the third channel, but light easterly winds detained us till the twenty-fifth. On the thirty-third day we made the port of Okotsk, and reached the anchorage of the outer bay. On the thirty-fourth I landed in a tremendous surf, at risk of my life. Feeling anxious to get ashore, and in spite of recalls and signals I passed safely through the surf, which swallowed up six out of twelve of a boat that also subsequently attempted it ; finding myself near me, I continued straight on, while the boat attempted to turn, and reaped the disastrous consequences. The chief of Kamtchatka, his family and my wife, landed the following morning upon the outer beach ; and the brig, on the next day, reached the harbour in safety.

From this relation of my voyage, I should feel very pleased if I could draw the attention of the Russian government to the propriety and necessity of surveying generally the Kurile Islands, but particularly those extending from Cape Kamtchatka to the latitude of 46° . It is within that space that the transports, from and to Okotsk and Kamtchatka, pass the Kurile straits. I had occasion last year to notice what I considered an error in the geographical position of the third and fourth Kurile islands ; this year I repeated my observations with somewhat more precision, in consequence of the light winds and calms which attended us for some time. The latitude of the fifth

island is certainly wrong : at noon, on the 24th July, O.S., we were in latitude $49^{\circ} 33'$, at which time the most northern part of the island bore W. by N. at about four leagues ; at the same time that the island lying to the westward of it was one point open to the north. This could not have been the case if the charts had been correct : every allowance for the error in Admiral Kruzensterne's chart may, however, be passed over in silence, as he did not survey this part, nor, indeed, any so far north.

The second channel is certainly the preferable one, when bound from Okotsk into the Eastern Ocean, because, although it is formed by four islands, and is generally attended by fogs, it can always be run for, as a fair wind is a clear wind. Going, however, from Kamtchatka to Okotsk, the third channel is the better, as it is formed by two lofty, though small, islands, and has considerably less fog and current. Calms or gales, heavy fogs, strong and changeable currents, prevail in these seas, and render the navigation, in the hands of those generally employed, tedious and perilous; indecision and incapacity marking every act. The government deserve credit for their late liberality in settling the establishment of Okotsk : still, however, much remains to be done. The encouragement held out to young officers, to induce them to serve in this part of the world, is generous ; but there is yet wanting encouragement to officers who are already initiated into the practical, as well as theoretical, part of a seaman's duty. As the case is, none but boys from the college are sent ; who getting the command of a vessel before they have even been afloat, are obliged to confide in the order officers, and all subordination ceases, except that which is enforced by hasty punishment.

tarting has found its way from the navy of England to that of the Eastern Ocean.

Having once more reached the continental part of Asia, I began to prepare for my journey to Yakutsk. In the mean time, every attention and kindness was renewed to me by my old friend, the chief of Okotsk, and his amiable lady. Many considerable additions and improvements to the town and port had been made during my absence. The buildings belonging to the American Company had been transported from the ground on which they were constructed, to the new town, having been framed and prepared at the old town, on account of the proximity of the workmen, as well as the difficulty and danger in crossing the mouth of the harbour during summer. A new brig had been repaired, and was now ready to launch. Two large flats had been built for transporting flour across the bay. A sort of custom and warehouse had been erected, for the use of the merchants, the receipts of which are given to the support of the poor; and two magnificent magazines, a post-house, and other buildings, together with five thousand large trees in the dock-yard, have been added, through the activity of Captain Ushinsky. I may confidently say, that were the same industry and knowledge to be continued in operation for five years longer, Okotsk would not cede in regularity, cleanliness, or durability of buildings, to any wooden town in Siberia, except Barnaoule.

It is a pity that a dry dock is not formed for drying up the transports during the winter. The means are ample, the rise and fall of the regular tide very considerable, and the ultimate advantages incalculable. The duty at the port is heavy, owing to a want of officers, artificers, and sailors.

The correspondence with Irkutsk is enough for a government, much more for so small a place. Two vessels belonging to the American Company arrived during my stay in Okotsk,—one in ballast, and the other almost empty, having but two thousand river-otters on board. It is incomprehensible why this body do not fit out small craft for the purpose of taking seals on and round the Isle of Ayon ; its distance from Okotsk is about one hundred and fifty miles, and the interval would, no doubt, be the most thriving scene of their adventures. Who is the director of the concern I know not ; but I am quite certain, that, by visiting the establishment once in three years, he might do much good, and prevent more robbery.

Being fully prepared for my journey to Yakutsk, distant, in a direct line, seven or eight hundred miles, we departed on the evening of the 27th of August, a very late period of the year, crossing the Great Bay, and encamping for the night at Bulgeine, near the remains of an old hospital, then in a fine situation, but lately removed to a worse one in the town. It ought at least to be still used for those who are in a convalescent state, having the advantage of a better air, some vegetables, and plenty of milk. The following morning our caravan amounted to near two hundred horses. I had thirteen, besides a couple of tents, one for my guides and Cossack, the other for myself. Provisions were laid in for six weeks, as nothing is to be procured upon the road except flesh meat. My present situation upon leaving Okotsk was too different from the last to escape my observation. Then, I was wandering about alone, careless of the past, unconcerned for the future, and, like the brute creation, alive only to the present hour. Now, it

a young wife to protect through an execrable journey on horseback, and exposed to the severity of winter, I felt, and felt deeply, that prudence and foresight were peculiarly necessary. She, who had only seen three or four horses in her life, was consequently not a little terrified; but what will not perseverance overcome? The difficulties she encountered, ⁱ this and the subsequent journeys, were such as would have shaken the most robust, and bore very hard upon her delicate frame; yet it is but justice and truth to say, that in no part of our journey did she express a murmur; on the contrary, the more real or apparent the difficulties to contend with, the more willing and reconciled I found her to brave them.

From Bulgeine we made ten miles, halting on the banks of the Okota. Our route thence lay over a well-wooded, but swampy, country. At thirty miles we parted from the amiable chief of Kamitchatka, who was about to return to the peninsula, in company with his successor, agreeably to orders from St Petersburg; which enact, "that no governor nor other officer shall quit his post until his successor shall have arrived." This is a regulation which will have a very salutary effect over Siberia. It is, however, to be regretted that the Siberian law, which forbids "father and son, uncles and nephews, or brothers, serving together," is in no way attended to; at least, where high rank is concerned. The late governors of Irkutsk and Yakutsk were father and son, the latter holding both Yakutsk and Okotsk; the late governor-general of Siberia and the governor of Tobolsk were also brothers; and although I do not mean the smallest imputation against their characters, *still I maintain that a beneficial regulation*

is injudiciously set aside.—To return to my journey: the third day we reached Meta on the Okota, and I enjoyed highly the very fine scenery about it. On the fourth day, what with rising late and halting early, for the accommodation of the ladies, of whom there were six in our caravan, we made but twenty miles, and encamped upon the banks of the Urak, which I shall remember equally with the Arko; the former for endangering the life of my wife, and the latter, of my own. My wife had a good horse, but had imprudently exchanged it to try a second, and a worse. She was thrown with such violence as to lie for twelve hours senseless and speechless; but, thanks to Providence and to two sons of Æsculapius, who were journeying with us, she recovered in a great degree, though she has ever since been liable to a pain in the right temple. The next forenoon we resumed our journey along a picturesque valley, watered by the Urak, which we forded nine times in a distance of forty miles. The country, like the numerous islands in the river, was well covered with poplars and birches, intermixed with larches. The number of rivers and branches of rivers that are forded and passed upon the journey from Yakutsk to Okotsk, is quite inconceivable. Captain Minin told me there were not less than a thousand; many of them requiring much presence of mind, and a spirit accustomed to danger, on the part of the traveller, to enable him to attempt what we were daily compelled to undertake, or pass our lives in Eastern Siberia—rather a hard lot, whatever I may think of the enjoyments to be had in Central or Western Siberia.

We now got into the land of wild berries, especially of currants; the tracks of bears and wolves

were also discernible. We passed the half-way-house to Krestova, and following a route through a forest of fine timber, pitched our tents, and received the first real salutation of winter in a heavy fall of snow ; this was on the 2d of September, O. S. Thus, in one short night, from the beauties of autumn, we were involved in the dreariness of winter. The following, a tremendous stormy day, we made, with great difficulty, twenty miles, and reached a halting place half frozen, and more than half drowned, from the frequent necessity of fording lakes and rivers. Our halting place was near a deep swamp, which was perilously waded by the whole party. The weather next day was such, that we remained in our tents, and employed ourselves in drying our clothes, &c. after which we bade adieu to the Urak, which rises not far hence, and falls into the sea of Okotsk, not far south of the city, at the salt work establishment. We reached, in a hard frost, the river Udoma, where we were detained, owing to the late snows and rains having swollen the river to an unusual size. I had succeeded in crossing, but my horse not being in a condition to take me back, I could not return, and was thus cut off from the rest of the party for the night. An axe being always suspended from my saddle, and a flint and steel being always round my waist, I made a good fire, and passed the night as well as could be expected. At the halting place, we met with a priest going to Okotsk ; he had been forty-six days upon the road, owing to the overflowed state of the country. There are times when seventy and eighty days are necessary to perform the journey, the rate of progress being confined to five and six miles a-day.

With much labour, and considerable apprehen-

sion on the part of the women, we next day crossed Udoma, my wife being towed over the stream on horseback by two Yakut guides. Seven miles beyond, we reached Udoma Cross, where an under officer of the Cossacks resides, with a few Yakuti; the station serves for a post-house, has also a magazine of flour, and the person in charge has the command of a great number of Yakuti. Its situation is bleak and exposed, but is advantageous on account of the fish and game, as well as from having the most beautiful pastures in its neighbourhood. From Udoma Cross there is a water communication to Yakutsk, by means of the Udoma, which falls into the Aldan; the latter of which ultimately enters the Lena. This aquatic communication is not so much attended to as formerly, when all the stores for Captains Behring's and Billings' expeditions were thus forwarded with success. It would seem that the Russian government are not now so forward as formerly in patronising water communications; indeed, the only person in the Russian empire who has persisted in applying the power of steam, is an Englishman at St Petersburg; and he has a ten years' exclusive privilege on all rivers, lakes, canals, &c. It is to be hoped, when Mr Baird's time shall have expired, the government will undertake it on the most liberal and extensive scale. The whole distance from Yakutsk to Okotsk might be accomplished by large canoes, except the passage of one chain of mountains, which confine the Arko, a large stream uniting with the Okota. The whole distance from hence to the Aldan by the Udoma is six hundred miles, while the direct course is about one hundred and eighty; the voyage is, however, performed in five or six days.

We procured at Udoma a supply of fresh meat and wild berries ; and having fed the horses well, and rested them for a couple of days, we resumed the journey towards Alack Youna, a distance of one hundred and thirty miles, part of which lay over half-frozen rivers and swamps, along a picturesque valley. The first day our party lost three horses by excess of fatigue, and from the ice giving way under them. The country was well wooded, and, as we continued, some tall firs were seen mixed with the larches and alders. We continued along the valley, making from fifteen to thirty-five miles per day. The cold had increased to 6° of Reaumur. The fifteenth day we reached the Outchakan. Our halting-place commanded a most magnificent panorama of mountain scenery ; the river branched out into numerous shallow channels, whose rippling, joined to the murmur of the wind against the trees, adds a pensive air to the sublimity of the scene. The hills rise one above another in a regular succession, to a great height, and the whole appears one of the most secluded and desolate spots I have ever witnessed. In so cold a place I never saw so much and such fine timber, which, lying at the foot of the hills on the north side of the numerous valleys, and gradually diminishing as they reach the more exposed places, give an air of picturesque beauty, seldom to be met with in so high a latitude. All was still save the murmur of the waters and of the trees ; not a voice was to be heard, nor a creature to be seen, but of our own party ; no fire, not even a charity yourte—in short, nothing to greet the arrival of the weary traveller in a spot where eternal winter reigns. A cold north wind for ever sweeps through the valley, destroying almost every *species* of vegetation ; and such is the

ALACK YOUNA.

extreme rigour of the climate, that solid massive ice was to be seen even in the months of July and August. When we crossed the centre of the valley and the river, the thermometer stood at 16° below zero, and the ice-banks on the river were twenty and twenty-four inches thick. To the religious or philosophic mind this may be a safe proof the caves of the world being certainly far removed from it, as during nine months in the year, nothing but a monthly post-Cossack comes within some miles of it. We lost four horses from the effects of the frost, and resumed the journey as we could, along a succession of valleys, for twenty miles when we halted at the foot of a tremendous range, formed by two high mountainous precipices. We lost five more horses, though good pasture was to be had, every thing bearing the most wintry appearance.

Henceforth our progress became tedious, uncertain, and very laborious, as the remaining horses were so heavily laden. We entered the next day on the valley and river of Anchekon amidst much snow, but in warmer weather. On the 13th (25th) September, we crossed an elevated chain of hills, whose precipitous or steep ascents gave us much trouble: these hills separate the two governments of Yakutsk and Okotsk. We reached the river Atchan, which falls into the YOUNA, receiving also the Anchekon, and ultimately all uniting in the Aldan, Lena, and Frozen Sea. It was late when we reached the post station, called Alack YOUNA, having come twenty-five miles of most execrable road.

The country now assumed a more lively and picturesque appearance. Lofty ranges of table land bordered the conical or triangular mountains.

pasture plain lay before us, and abundance of corn and hay-stacks was every where to be seen.

This is, indeed, an eligible place for a post, which is established on the left, or south, bank of the river. We had staid two days to rest man and beast, and on the 15th (27th) reached fifteen miles, a narrow defile, where we ascended and descended six steep and dangerous passes, after which we halted on the banks of the Konkui, which also unites with the Aldan. Rising the following morning, we made thirty miles, half of which were along a narrow and deep river, and the other half over three steep and mountain-passes, the summits of which afforded most extensive, but dreary, prospect. The thermometer, at the most elevated point, stood at 10° below frost. Having crossed the mountains, we entered the land of evergreens—the pine and fir—affording a welcome relief to eyes which had so long dwelt on nothing but desolation.

Following the Konkui to the right, along the banks of which is the proper route, we crossed, at ten miles, an elevated mountain range. We had adopted this route in consequence of the lateness of the season, as there are in that river forty-six places where horses are forded, a task which our horses, in their present state, could not perform. We made near thirty miles, but the baggage did not arrive until the next night, twenty-three horses being knocked up, and six more having dropped dead on the road. I cannot but pity the distress of the poor Yakuti, being thus compelled to forsake their favourite mode of transport, which would not have been so severely felt, if they could have taken away the carcasses for provision; many of these horses were in a good state,

but became frozen in the morasses, and were dead by morning.

We met the post from Yakutsk, and, in the course of an hour more, we were overtaken by that from Okotsk; the latter had been encountered by a bear, which had destroyed most of the letters and papers. The Journal of Captain Vassilieff's Expedition, in particular, had suffered much. There was also a considerable sum of paper money in the post, but this happily escaped injury. We reached Tchornoi Liess, or Black Wood, the following day. The road was at first along the little river Chakdalka, and then on the White River, both uniting with the Aldon, until we reached Chekonoi, or the Weeping Country, so called from the Yakut losing so many horses in its swampy and half-frozen marshes; out of my thirteen, four were knocked up. The pasture is good, but the horses treading it are embayed in the deep swampy part so long, that the frost fastening on and penetrating their feet, causes their certain death. The stench from the dead carcasses is, at times, distinctly perceptible; and the carcasses of the numerous horses thus frozen attract many bears to the place. At Black Wood, there is a post-house, magazine for flour, and three yourtes, in an open country, fifty miles from the Aldan.

From this great loss of horses, I was obliged to forward my wife on in charge of the Cossack, and remain to bring up the baggage, and buy or exchange horses as could best be done, for the benefit of my Yakuti. I remained for thirty-six hours bargaining, and, at length, having procured three fresh horses, overtook the party before they reached the Aldan. The last twenty-five miles are over a continual wooden causeway, in many places

wretched a condition, that it is dangerous for horses to go by it; the country was a most dreary, low, swampy, and brush-wood place. A good ferry the next day took us across the Aldan, at a part which is three quarters of a mile broad. Afterwards, over a well-wooded and picturesque country, we reached a most comfortable yourte, twenty-five miles beyond the river. We now began to feel the effects of fatigue and cold, and continual exposure to the open air. When I say we, I should except myself, for I never was better or more contented; but I considered the situation of the females on horseback, with 15° to 18° of frost, without a hut or covering to receive them, and passing the night in the snow, as no ordinary circumstances. To me a tent has less of pleasantness than the open air, as affording a sort of stoppage to the snow drift; which circumstance, wherever there are fires, renders every thing uncomfortably damp; therefore I preferred lying down to windward of a fire, changing sides, as one became frozen or the other roasted. The season was, however, so far advanced, that we apprehended the danger of being detained on the right bank of the Lena for a month or more; it was therefore resolved to push on.

From the Aldan the country becomes a fine and open park-scenery; many interesting prospects strike the attention of the traveller, and the quantity of cattle is a sensible relief. We reached, and were ferried over the Amgha, a large stream uniting with the Aldan. Passing many lakes, abounding with a small but delicious carp, we reached, on the third day, a post-house, where we procured kibitkis. The severe frost, and heavy falls of snow, combined with the flatness of the country

over which our future track lay, rendered the journey more expeditious and agreeable ; and we were enabled to reach two stations, or forty miles, over a country not unaptly termed, as far as regards scenery, the Siberian Caucasus ; for, although not so elevated, the scenery is most romantic, and carries with it many rural charms, not to be looked for in such a part of the world. The inhabitants, who are all Yakuti, I found, at every part of my journey, civil, obliging, and hospitable ; and if we met one who was knowing, cunning, or knavish, and accused of being such, he would readily retort, by asking, Who taught the Yakuti to be knaves ?

Horses had now become so scarce, that our baggage was drawn by oxen. For my own share, out of thirteen horses, only one was able to reach Yakutsk. I mention the circumstance, that my readers may be fully aware what a terrible undertaking it is for the traveller, and what a cruel one upon the unhappy Yakut, and still more unhappy horse.

The forty miles we made the following day, placed within our reach a flour-magazine, a grog-shop, and a pedlar's stall. There are many Yakuti settled in the neighbourhood, abundance of horned cattle are every where to be seen, and the quantity of hay collected for them is prodigious. We had now but eighty miles left, forty of which were accomplished on the 27th of September, O. S., over a low, flat, swampy country ; after which, through a crowded forest, we reached the banks of the Lena. The latter part of this day's journey reminded me of Old England ; the very regular fences and hedges presenting an appearance of economy and thrift which I had not witnessed for a long time. Upon the 1st of October, we reached the

ity of Yakutsk, at a time when the river was almost impassable from the quantity of heavy floating ice. Good and comfortable quarters had been prepared for me through the kindness of the chief, who had recently arrived. I discharged my Yakuti, well satisfied with their conduct, although two of them, and the Cossack, managed to consume, independent of four quarters of their ox-beef, and one horse, which was killed, ten poods of beef, or near four hundred weight. It may not be improper, in this stage, to give some idea of the character of the Yakuti, and of their numbers.

They are evidently of Tartar origin, as their language is understood by the Tartars of Kazan. Their complexion is a light copper colour ; they are generally of low stature, with more regular and pleasing features than the Tongousi ; they are more hospitable, good tempered, and orderly, but neither so honest nor so independent ; they have a servility, a tameness, and a want of character, which assimilates them, in some measure, to the despicable Kamtchatdales. The more a Yakut is eaten, the more he will work ; touch a Tongousi, and no work will be got from him. The Yakuti are very ingenious, and excellent mechanics ; they make their own knives, guns, kettles, and various iron utensils. They are patient under fatigue, and can resist great privations. They are, like the Tongousi, great gluttons, but subsist mostly upon horse-flesh ; a mare being considered by them as the greatest delicacy, but never slaughtered except as a sacrifice to a shamane.

Their riches consist in large herds of horses and horned cattle, besides an abundance of the finest and most valuable furs. They also carry on a considerable trade among themselves, and some of

CHARACTER, &c.

5
their princes are immensely rich, doing business to the amount of one hundred and fifty thousand roubles a-year, and yet living in the same misery as their servants, sleeping in the same apartment, which, perhaps, contains forty or fifty people. Their dress differs little from that of the neighbouring tribes, being made of rein-deer skins for the rich, and horses' hides for the poorer class. Many of them still subsist entirely on fishing and hunting. Their greatest luxuries are tea, tobacco, and spirits. They sit cross-legged. The greater part of them are converted to Christianity, and the clergymen, in many places, deliver their sermons in the Yakut dialect. Indeed, so fashionable is it, that, in the best society at Yakutsk, the Yakut dialect is used for all private conversation, or in the presence of an European officer.

Their yourtes are comfortable, and, upon the rival of a guest, are made as clean as clean straw can make them; in other respects, they are disgusting enough, being but too frequently filled with vermin. The yourtes differ from all the others I have seen, consisting of one large apartment, and a cow-house adjoining. The mode of constructing their dwellings is as follows; nine posts are driven into the ground in the form of a square, the three in the centre being higher than the others; on these posts they lay three beams, while the four corner posts are connected by two other cross beams. Stout planks are then placed sloping from the ends to the horizontal beams to which they are fastened, while other planks are also laid sloping from the upper part of the roof to the side-posts, overlapping the others. Grass, mould, and dung are then plastered over them in lieu of caulking, and the walls are banked up with the same.

enced, in during winter. The heat in the yourte is preserved by means of the snow, which becomes hardened to such a degree as to resist the fire and smoke from the chimney; blocks of ice are placed on the sides of their abodes, instead of glass, and serve as windows; they give a clear transparent light; though sometimes bladders or oiled paper, as well as a particular species of fossil, called *Vitrum Ruthenicum Maria*, glass, or talc, serve for the same purpose. Three sides of the interior are divided into partitions, two or three people living in each, according to the size of the family, and are used as bed places; they are three or four feet wide, and ten long. In the centre is the hearth and chimney, formed by upright sticks, plastered on the inside. The wood is placed in an upright direction on the hearth, and the fire is kept up constantly day and night. The state apartment, and of course that occupied by the chief guest, is the farthest from the door, and immediately under the image. The odour from the cow-house, although disagreeable, is considered very healthful, and far preferable to mixing with thirty or forty people, whose stench and filth are inconceivable. With only a few inmates, and additional cleanliness, I consider a Yakut dwelling to be extremely convenient, and peculiarly fresh and wholesome. Their kitchen utensils are not numerous; a large iron kettle or boiler, a large tea-kettle, and a few wooden bowls and spoons, with still fewer earthen jars, and a knife for each person, constitute the whole. The richer Yakut may have a samavar, or tea-urn, and perhaps, in such case, a tea-pot also, but, in general, the tea is made in the kettle. They use no plates, but, taking a large piece of beef in their left hand, they secure it with their teeth, and then

cut away as much with the right as will fill the mouth ; some warm melted butter finishes the repast, when the pipe and tobacco come in as a desert.

The population of the government of Yakutsk, as appears by the official return, is as follows :—
In the circle or commissariat of

	Males.	Females.
Yakutsk	42,853	44,193
The Kolyma	2,384	2,155
Villuifsky	17,477	17,419
Zashiversky	5,168	4,901

	<hr/> 95,651	<hr/> 93,016

Total . . . 188,667

Of these probably about one hundred and thirty thousand are Yakuti, the rest Tongousi, or Lamut-ki, and Russians.

Again settled in Yakutsk, I had time to walk about and see all that is worth seeing. If my former opinion of it was bad, it is now worse ; the only alteration being, that some of the churches, and the monastery, have been white-washed. There are about a dozen respectable-looking houses, the inmates of which are not even on speaking terms with one another. The little charm there was in the society of the place during the reign of Captain Minitsky, is now entirely dissipated. There is now no difference between fast and feast days, and the number of the parties and opinions in the city is almost equal to that of the inhabitants. Captain Minitsky kept a liberal table, and furnished every possible incentive to society. He was altogether

the proper chief for the city of Yakutsk. The present amiable governor is a widower; a circumstance which cannot fail of rendering him unpopular with the fair sex, which includes a great number of sprightly and handsome girls. Probably no place has better means for forming agreeable evening parties than Yakutsk; and yet it seems that the envy and jealousy entertained against individual members of each other's families, are so prevalent, that one merchant will not associate with another; all seems distrust and intrigue—each aiming to become the chief's favourite merchant, for, upon that circumstance, much consequence is attached. The number and the wealth of the principal inhabitants are such, that a chief, by a wise, liberal, and independent policy, may amass a very considerable fortune. It is not long since that a governor kept open house; his table was at all times laid for twenty, and the evenings were passed at cards and billiards. No Yakut from a distant village entered his house without receiving his day's food, a dram, a pound of tobacco, and a night's lodging. The result was, that when his birth or saint's day arrived, the merchants and Yakut princes agreed that he had a noble heart, that he spent more money than he received, and that, therefore, it was necessary to reimburse him; and, instead of receiving twelve or fifteen thousand roubles' worth of skins upon the day of his feast, he received probably forty thousand; and, by these spontaneous offerings of the inhabitants, he is said to have gone away the richest chief ever known. His name I shall not consider myself at liberty to mention, as I believe he is still living.

Nothing noticeable occurred to us here, with the *exception of a few visits I made to the chief, and*

80 CHARACTER, &c. OF THE YAKUTI.

also to Mrs Rikord, in whose company we had come from Okotsk. She resided with a Mr Paul Berezin, the most liberal and agreeable man in the city, from whom I received every attention : indeed, I was considered an acceptable guest in every part of the city ; each individual had something to tell me of scandal, and, if I visited one more than another, it was certain to get me into momentary disgrace ; but I must do them the justice to say, that, by a little good and amiable policy, a fair society may in a short period be formed in Yakutsk. I have seldom seen a place where the comforts and necessities of life were more abundant or cheaper, nor are the luxuries at all scarce.

CHAPTER IV.

Departure from Yakutsk—Tastakinskoi—Olekma—Berezova—Vittim—Kirenga—Katchouga—Bratsky Steppe—Verholensk—Re-arrival at Irkutsk—The Angara river—The Baikhallake—Verchney Udinsk—Selenginsk, and the Missionary station at that place.

In this inert state I passed two heavy months at Yakutsk. The cold latterly became severe, the thermometer falling to 32° and 35° of Reaumur, yet never so low as to compel me to put on more than my ordinary clothing, consisting of shoes, worsted stockings, coat, waistcoat, trowsers, and hat; while others wore caps, warm boots, cloaks, and mittens, I even went without gloves. My time was principally employed in preparing a vehicle to enable me to reach Irkutsk when the Lena should become bearable. The first sledges which left the city were those of a lieutenant of the navy, of the name of Novosiltsoff. He departed on the 12th of November, and I on the 15th. It was considered very late, in comparison with other years, when the Lena is generally frozen so as to allow of travelling on the 1st of November.

The first twenty-four hours I reached Tastakinskoi, one hundred and twenty, and Kiesick the fol-

lowing day, one hundred miles. The road proved very bad, otherwise it is no uncommon thing, in this part of the world, to traverse three hundred and sixty, or three hundred and eighty versts, i.e. more than two hundred miles a-day. Indeed, it is a well-known fact, that, in the winter season, the present Emperor takes but forty-two or forty-three hours in travelling from St Petersburg to Moscow, a distance of about four hundred and twenty miles. During my stay in the Peninsula of Kamtchatka, a courier arrived from St Petersburg in one hundred and five days; the distance being about thirteen thousand versts, gives the rate of one hundred and twenty-five versts a-day. The distance to Okotsk was performed in forty days, at the rate of two hundred and fifty versts a-day; while that to Yakutsk required but twenty-eight days, being three hundred and twenty versts per day. The journey from Okotsk, by way of Idgiga, to Tygil, is, however, so perilous, laborious, and tedious, that it is rarely performed in less than seventy or eighty days, although the distance does not exceed three thousand versts, thirty being the daily average. As a proof of the wonderful rapidity of the Russian courier, I need but mention, as an extraordinary fact, that my marriage, at St Peter and St Paul's, was known in London in less than five months from the time it took place:—the distance cannot fall short of ten thousand miles. There occurred upon this route some parhelia, or mock suns, but they were faint. The cause of these phenomena I do not pretend to understand, but they seem to me to be a double reflection from the effects of the atmosphere. The weather, during such phenomena, I have remarked to be very cold, very clear, and the atmosphere filled in

small crystal spiculæ. I am not aware that parhelia are ever seen, at sea, in the high latitudes ; but if so, it cannot be from the effects of snow. Many parhelia have also been visible in England, at a time when there was no snow. I should conceive hence, that, from whatever cause the phenomena may spring, it must be the same which discovers to us the sun, when beneath the horizon ; and this I should term reflection, rather than refraction.

Upon the fourth day I reached Olekma, four hundred miles, and, for a trifling sum, exchanged vehicles, mine having become injured. Situated at the foot of an elevated range of hills, the town of Olekma, at the conflux of two streams, has an interesting appearance. The inhabitants are employed in fishing, hunting, and trade. The weather, thus far, had much favoured us, the thermometer never having exceeded 20° , while at Yacutsk, we had once 35° . Much snow fell the following day, in which we reached one hundred and twenty miles, passing through the little village of Berezova, which is the most northern on the Lena producing rye-flour. We reached Jerbat the following day, and again ascended the hill to view the cave : the fatigue necessary to ascend this short precipice was such, and the effects of the cold, from the cave, upon my perspiration so great, that I was obliged to desist from the attempt I had contemplated, viz. to furnish myself with a fire-brand, and be lowered down into it by a rope. The road hence became very narrow and bad ; so much so, that the lower parts of the carriages were twice broken and exchanged. So slight, however, is the consequence of such a circumstance, that three billings are sufficient to procure a complete refit. The stages, upon approaching Vittim, are too heavy

and long,—the horses have to go from thirty to forty miles ; but what must be the suffering of the driver in a frost of 30° to 45° , even in a perfect calm ? The speed of travelling is so great, that the mere act of passing through the atmosphere is insufferable : the risk of travelling is thus considerably increased, as the drivers cannot look before them, but are obliged to turn their heads, and let the horses go at will. There is no difference between passing, at a rapid rate, through a clear still atmosphere, and through a sharp wind at a slow one. In general, my drivers arrived frost-bitten, and, in some instances, severely so.

Upon the 22d November, O.S., I reached Vittim, the half-way house to Irkutsk, celebrated for producing the finest sables in the world. I have seen a pair sold for twenty pounds ; those, however, are of the first quality, too scarce to allow many people to have cloaks of them, even if they inclined to go to the expense. There is also an inconceivable difficulty in selecting one hundred sables of the same size and colour, as are requisite to form a handsome cloak ; probably ten thousand would be necessary. A cloak of the kind would then be worth, at least, twenty thousand roubles, or one thousand pounds. From Vittim, we encountered very severe weather, the thermometer varying from 32° to 38° ; the roads were, however, good, and our daily route was about one hundred miles. The days were passed in the most dreary and monotonous manner ; even the celebrated Cheeks of the Lena afforded no interest at this season. These are cliffs upon each side of the Lena, between Kirenga and Vittim, which seem to have been severed from each other by some convulsion of nature, and present a remarkable ap-

pearance. We generally halted at eight in the morning, to boil a kettle for tea, which, with some hard bread and dried fish, constituted our breakfast. Our dinner was also of tea ; and supper only varied from breakfast, in the addition of some stewed beef ; these were the only intervals which we took for rest. I found, by experience, that my wife could bear the fatigue of the journey even better than myself, therefore, I was unwilling to lengthen the time for my own personal convenience.

Upon the 25th of November we entered the government of Irkutsk ; and, although we were now with little or no moon, we were still enabled to continue the journey by night, as, at every twenty or thirty yards, small branches of trees, or bushes, are placed, whose green foliage, contrasting with the snow, serves to direct the driver. There is, moreover, but one path, on each side of which the ice lies in large masses, thrown in every direction by the force or rippling of the current.

I reached Kirenga on the twelfth day of our departure ; on the last stage to which I overtook a doctor, and the clerks of the American Company, who preferred sleep to the passage of one dangerous stage in the night. Lieutenant Novosiltsoff had written upon the walls of the post-house, that the *ne plus ultra* of bad roads was at hand. My friends were in great apprehension of these dangers, till I observed, that Lieutenant Novosiltsoff would hardly return, by such a bad road, merely to advise others ; and, therefore, unless he did so, he could not have written what bore his name. It was late when I arrived, but as they persisted in remaining, I thought no time was to be lost in keeping the advantage of being a-head, aware, as I was, that *Mrs Rikord* was close behind us, with

a superior power to procure horses. The station proved no farther dangerous than that the ice was only about three or four inches thick. It cracked as we slid along it, but no accident happened. In truth, the bad station alluded to, was the one we had previously passed, and which presented a few fissures in the ice, caused by the increase of the frost, which contracts, and ultimately severs the ice.

At Kirenga I was detained twelve hours, owing to the chiefs of three departments having kept up Saturday night rather merrily, so as not to be able to enter my passport in the book for that purpose, or to enable me to proceed without it. Kirenga is one of those few places thus misgoverned, although the town major is a good sort of a man, when sober. He called upon me afterwards, and seemed inclined to be angry with, and to report, the secretary of the postmaster, for giving me and my wife an asylum in a warm apartment of the post-office, contrary to regulations, which prohibit any person sleeping in a public office ; but which, in fact, the secretary had taken upon himself to do, with the most humane consideration, seeing the incapability of his chiefs to provide us either with passports, horses, or lodgings. On his coming to his senses, I made no other remonstrance with him than merely saying, that he might save himself the trouble, as I should take especial care to represent the whole transaction to the governor-general. Kirenga is a dear place. Meat twelve shillings, bread two, for thirty-six pounds ; and fish, and animals of the chase, both scarce. It serves, however, to keep up the communication with the kutsk, as well as to enable it to be said that *there are two towns on the Lena!*—which runs of three thousand miles.

From Kirenga, a fine road and good horses enabled us to extend our daily progress to one hundred and fifty miles. On the second day after leaving it, I was favoured, for the last time, with parhelia, in a much more beautiful and singular manner than any I had before witnessed, and shall endeavour to describe them. There were three mock suns, one on each side, and of the same altitude as the real sun, and a very faint one just over it, at the same perpendicular distance above the real sun as that was above the horizon. The mock suns, east and west of the real one, for it was near noon, bore a fiery red appearance upon those parts nearest to the real sun, while the outer edges of them were gradually shaded to a whitish colour. A slightly curved line of light connected the parhelia, passing through their centres to the horizon, and forming the figure of a rainbow, the sun being in the centre of the arch.

The reader will observe, that the distance from A to I, from A to C, from B to G, and from D to H, appeared to be equal; but from A to D, and from A to B, much greater; the latter being the cause of the rainbow's assuming an oval appearance. The strength of the rays from the real sun was very great; and I could only regret that the subsequent part of my journey, lying along a narrow defile of mountains, obstructed the view of so interesting a phenomenon. The weather was very cold, with a

cloudless sky. The wind, or rather the light air, was from the S.S.W.

Upon the third day after leaving Kirenga, I reached Katchouga, and then, passing through the large and populous village of Verkholensk, and a beautiful country, producing some good corn and more hay, we reached the Bratsky steppe, or desert. Civility and hospitality on this part of the road are carried even to excess. I found the elders of the villages ready to show me every attention, and even begging me to pass a night in their comfortable isbas, or dwellings. The country abounds in cattle of all descriptions peculiar to this northern part of the world, and the settlements may be termed very rich. At Verkholensk, I bade a perpetual adieu to the Lena; and, although without a moon, traversed the Bratsky steppe, during the night, without any difficulty, mounds of earth being thrown up at every fifty or sixty yards, into which is placed a post, chequered black and white, or a black post with a white head. Both are termed, I think, very undeservedly, Paul's Folly; they are very useful to travellers, and are worthy to be well spoken of. The post-houses now became far superior to any we had passed farther to the north and more respectful attendance was shown us; every place as we approached the capital; a fact certainly in direct contradiction to general observation and experience.

Passing over the Bratsky steppe, we met immense herds of horses and horned cattle, who stopped, and even approached to gaze at us as we galloped over the theatre of their independent evolutions. Upon the morning of the seventh day, we reached Irkutsk, in time to breakfast my old friend, Captain Koutigin, the chief

navy at this *port*. After breakfast, I presented myself to his excellency the governor Tzedler, who not only proffered the same attentions and assistance as before, but also insisted upon my accepting apartments in his elegant and hospitable mansion, appropriated to the residence of the governor. I felt truly grateful for this last act of kindness, as the elegant accomplishments of his lady, his sister, and his daughter, are such as not only make them models for imitation in Siberia, but will, anywhere, ensure them the respect of the first circles. I felt that my wife, young and ignorant of the world, could not fail, in their society, to acquire many of those little nameless graces so necessary to form the female character.

In company with my hospitable and excellent host, I waited upon the governor-general, Mr Lavinsky. I was received with much hospitality and friendship, and was promised every assistance in the furtherance of my views ; and, having expressed a desire to visit Nertchinsk and Kiakhta before I returned to Europe, his excellency kindly granted the permission. I did not expect so much good fortune ; I did not think that a second Speranski was sent to be governor-general, but I found that Mr Lavinsky possessed great goodness of heart, and an equal degree of amiability, although, perhaps, less commanding talents ; because I believe there are few to be found equal to those of Mr Speranski, whose condescending kindness to me was brought more forcibly to my recollection by his excellency's introducing me to a Mr Strannack, who is distantly related to him, and with whom I enjoyed many pleasant hours. His excellency, Mr Speranski, married a niece of that much-respected gentleman, Mr Planta, of the Bri-

tish Museum. Mr Strannack was about to inspect the post-offices in the governments of Irkutsk and Yakutsk, beginning with the circles of Nertchinsk and Selenginsk, which latter places I was also desirous of visiting; we therefore agreed to travel together, having previously obtained the consent of a Mr Yakobleff, the chief of this inspecting commission, whom I found an agreeable and amiable companion, and related to the most commercial, enterprising, and wealthy merchants of that name.

The season for commencing this journey was, however, distant some weeks, as it was not yet possible to cross the Baikal, much less the Angara, neither of which are considered passable before the 1st (or 10th) of January. We therefore continued to enjoy the comforts of Irkutsk, in the same liberal and hospitable manner as I had done upon my outward journey. The public balls had fallen off, but we were more than compensated by the private ones given at the houses of five or six individuals. There was, however, a masquerade ball, which went off well, as also two or three others in the assembly rooms. The maslenitza, or carnival, was a time of much amusement, and many well-dressed characters went from house to house; I, of course, among the merriest, if not the best dressed. Thus our time passed in a most agreeable manner, although I could not help regretting the death of my venerable and respected countryman, Mr Bentham. He died suddenly of an apoplectic fit, with the consolation of knowing that his widow and child would be well provided for.

To society in general, the loss of such an eccentric character would not be severely felt; and even if it had, it was more than counterbalanced by the arrival of a Persian prince, a handsome, intelligent,

and highly honourable character. He is retained as a hostage for the good conduct of his elder brother, the reigning prince of a tributary territory on the borders of the Black Sea, called, I believe, *Trebisand*. The conduct of the reigning prince has caused some disapprobation at the Court of Saint Petersburg, which, not being able to arrest him, took the present man, whose conduct has gained him the unqualified respect and friendship of every inhabitant in this city. Nor are his pecuniary means at all incompetent to support a good establishment, receiving, as he does, a considerable pension from the Emperor Alexander. At all public dinners, balls, &c. he is considered an acceptable guest; nor does he fail to attend them regularly,—they serve at least to drive away dull care, and probably to lighten the burden of being, in time of peace, a prisoner. There are two others of these border princes, one of whom is kept at Nishney Udinsk, and the other at Nertchinsk;—their conduct does not seem to have induced the extension of the same liberal allowance as to my friend in Irkutsk. I believe they are only allowed a rouble per day. Both are charged with murdering their elder brothers, to gain the throne or principality; while this one is only charged with being brother to a man inimical to the Russian sceptre.

The Angara ceased to roll its waters upon the 1st (13th) of January—that is, the road was declared open on that day, rather earlier than is usual, the 10th (22d) being the time that the merchants commence their journey to Kiakhta. The small quantity of water in the river this year will sufficiently account for the difference. Much mischief is at times occasioned by the heavy swellings of the river, previous to its being frozen. The ice

crumbles up to a great height, and threatens destruction to the houses upon the beach. There is a peculiar quality attending the Angara, the water of which in summer is so cold, that the thermometer in June was but one degree above the zero of Reaumur ; and in winter it is the warmest, as also the most rapid, of all the rivers in this part of the world. The water is considered as unwholesome, the inhabitants preferring that of the Ushakofsky, which passes near to the Admiralty, and which water is said to be one-twentieth heavier than that of the Angara, the rapidity of which is such that immense sheets of ice are carried under water ; and although, during the last six weeks, the thermometer had seldom been above 30° of Reaumur, it was still impassable.

The situation of this thriving city has already been pointed out, and the beauty of its position is evident. It is only by supposing it to stand on very elevated ground, that we can account for such severe frosts as visit it. The latitude is but little north of London, yet are the people obliged to bury themselves in smoke, both in winter and summer ; in the one season, to guard against the cold, in the other, against the vermin. Many improvements and additions in the buildings of the city had taken place during my absence, especially in brick buildings, the erection of which has been of late much encouraged by the government. That my readers may not be in doubt as to the respectable appearance of this central Siberian city, I have annexed a view of it, as taken from the left, or western, bank of the river Angara.*

I again visited the hospitals and gaols, as well

* It forms the vignette to the present volume.

as the foundling and workhouse. In all of them, I could not help admiring the respect and gratitude evinced by both descriptions of unfortunates in favour of Governor Tzedler. The public workhouse is an establishment upon a most laudable plan, and increasing its revenue and number of inmates in no small ratio. The latter circumstance may not speak much in favour of the mother country, but I believe there are few who form the wish, and few indeed who will ever return. Eight hundred men, women, and children, now partake of the benefits of the establishment. The public schools do well, especially that upon the Lancasterian system. The want of a seminary for the children of the middling classes is, however, severely felt; they will not go to the Lancasterian school, and they cannot be admitted into the college of nobles;—on this I have before remarked.

The Foundling hospital does not meet with any success. The Russians appear to be ignorant in the mode of governing an institution of the kind, else there would certainly be a different result. The severity of the climate, the inhumanity and negligence of the mothers, and, possibly, the incapacity of the nurses, are all to be considered. Be the fault where it may, scarcely *an instance occurs of a child being reared*. The allowances to the institution are liberal, and it is visited by the first persons in the city, with a view to its ultimate success.

Of all the public offices, that of the Admiralty is conducted with the greatest management and propriety. By this body, provisions are forwarded to every part of northern Siberia. Stores in abundance are collected for the use of the dock-yard of Okotsk, and the vessels building and built

do credit to the government of this part of the world. But why the executive of the empire should permit tar, rope, canvass, iron implements, and many other such heavy articles, to be sent from Irkutsk to Okotsk, I cannot divine. A single transport from Russia would carry as much in one year as four thousand horses; and the prices of the stores so sent by land are at least five times what they ought to be. This mode of purchasing stores for the use of Okotsk and Kamtchatka has been the means of filling the pockets of several commandants, owing to the circumstance of their being independent of every body but the governor-general.

Irkutsk will, no doubt, in the course of a few years, become a place of much greater importance to the Russian empire. Its resources would be sufficient even for a capital of an independent kingdom. The population of Siberia is, at this moment, large enough, and the natural means of defence are amply sufficient, even in the present day, to withstand an invading army. All the rivers of western and central Siberia run from south to north, and are consequently to be crossed in the face of an enemy. The immense deserts, or steppes, can be fired at pleasure, and all means of subsistence for cavalry be thus cut off. All provisions for the support of an invading army would have to come from Europe, consequently, more horses than men would be required. The situations of many of the chief towns in Siberia are also very strong, and could not be reduced without artillery. To sum up,—all the roads might, in a few hours, be rendered impassable. The Siberians have only to keep the Kemtchouga swamp, and they may defy all the powers of Europe. This is, however, far from being the time for the emancipation of these colonies.

The Russians are too happy in them to wish to shake off the yoke; though the aborigines would, no doubt, wish to see themselves upon some other footing. This, however, will no doubt occur too late to affect them, as, in all common probability, they will be extinct at no very distant period; there are not, at this moment, under the Russian subjection, more than seven or eight hundred thousand. What their numbers were at the discovery and conquest of Siberia, it might be as difficult to determine as the population of the empire of Mexico, at the time Cortes invaded it. Supposing, generally, that there were several millions, what has become of them?

My stay in Irkutsk occupied me until the 7th of January, when I departed, in company with the two inspectors of the post. The day was windy, but the road was good, over an open and well-cultivated country. The banks of the Angara present some pleasing views, and numerous populous villages are scattered on either side. The eastern bank is low, while the western is prettily diversified with hills. Each cottage has its garden; and a great spirit of industry everywhere appears. The first forty-five miles brought us to the magnificent view of the lake Baikal; on the road to which, we had met and overtaken thousands of carts and horses going to, and coming from, the fair of Kiakhta.

The approach to the unfathomable Baikal lake may be considered one of the grandest sights in the world. The river Angara flows in the foreground, gradually widening as it draws nearer to the lake, till, at length, the source of the river forms a pretty inlet, where the vessels for transporting provisions are laid up. The sight of a

number of vessels, in an apparently good condition, was to me a source of great pleasure; and I could only regret that the season would not permit me to embark on board one of them, instead of crossing, as at present, in a sledge. The mountains, everywhere round the Baikal, are of the most elevated and romantic appearance. They are bold, rocky, much indented, and very dangerous for vessels in summer, as no anchorage is anywhere to be found. The winds are most violent, and subject to instant changes, resembling hurricanes. The sea is said to run mountains high; and, as the vessels are badly manned and worse officered, it is no wonder that numerous accidents occur. July and August are considered as the worst seasons, May and June are the best; but, whether in bad or good seasons, it not unfrequently happens that the transports are twenty-five and thirty days in crossing a distance of fifty miles. It is here that the power of steam would best exhibit its incalculable advantages. A boat might ascend the Angara to the Baikal, cross that lake, and, entering the Selenga, reach within twelve miles of Kiakhda, and even hold a communication with Nertchinsk. All the flour and provisions for the north, would be thus more quickly, economically, and safely transported; and the immense traffic facilitated between Irkutsk and the several cities of Kiakhda, Petersburg, and Okotsk. The inattention of government, as well as of the opulent merchants, to this object, is truly incredible.

Having reached the Baikal, out of which the Angara flows, and into which the Selenga runs, we coasted it for thirty miles, before we arrived at the place of crossing. The ice was so clear, ~~was~~

parent, and slippery, that I could not keep my feet ; yet the horses are so accustomed to it, that hardly an instance occurs of their falling. We crossed the lake, and reached the opposite village, which has a considerable monastery, in time to breakfast : we had been two hours and a half in going the distance, forty miles. Such is, however, the rapidity with which three horses abreast cross this lake, that the late governor of Irkutsk usually did it in two hours,—three hours are generally taken. A horse once fallen, on the clear ice, I doubt the possibility of getting him upon his legs again. It is dangerous to attempt stopping them, nor indeed is it, in my opinion, possible ; if, however, the vehicle be stopped on this sort of ice, I almost question the practicability of starting it again, without assistance from other people, to force the vehicle on from behind. On the other hand, I have seen sledges move so much faster than the horses, as to overtake and turn them short round, and ultimately to form a complete circle.

From the monastery, we continued, over a low flat pasture, to a large Russian village of eighty dwellings. The road-side is well cultivated ; and we passed several villages before we reached Verchney Udinsk. Latterly, the mountains rose into peaks, and threw out some immense bluffs, overhanging the Selenga : they are of bare rock, but the valleys are in fertile situations. We reached Verchney Udinsk, a large, populous, and flourishing city, on the right bank of the Selenga, distant from Irkutsk two hundred miles. It has many handsome brick houses, churches, and public edifices, all running at right angles. There are three chiefs in it ; the first of them is called an Okroujenoy chief, viz. inspector of the circuit, and serves as a

check upon the others ; his business is, to go round the commissariat, to listen to, and redress, grievances. The second chief is the commissary ; he goes round all the commissariat, except the city, collects the tribute, and performs all the civil duties. The third is the town-major, who is chief of the city, but has no authority farther. It is evident that these three personages must either disagree, or combine to fleece still more their poor dependents. The appointment of the first chief, is a new regulation. They are all subject to the vice-governor and governor of Irkutsk, who is himself subject to the governor-general.

Verchney Udinsk is the grand mart between Irkutsk and Kiakhta, and has risen upon the ruins of Selenginsk. A very lucrative and considerable trade is carried on round the neighbourhood, with the Buriats, who are very numerous and wealthy, in furs and cattle. There is a strong garrison kept up, it being considered as a frontier place, and a daily communication, by a formal report, is held with Selenginsk. The town contains four hundred houses, and about two thousand six hundred inhabitants. The situation is considered healthy, and is so far pleasant, that there is a very good, though small, circle of society. From it to Selenginsk are seventy miles, which I performed, along the transparent Selenga, in seven hours. The banks of the river bore the most romantic appearance, the hills rising above one another into the loftiest mountains, but presenting no appearance of habitation or cultivation, except in the low valleys. The villages are, however, within four and five miles of each other, along both the banks of the river. I immediately repaired to the abode of the English missionaries, settled in this part of the

world, and need not say, that I was most kindly received by Messrs Stallybrass and Youille, with their wives and numerous children ; forming, as it were, an English colony in the centre of barbarism. Mr Swan, the third missionary, was absent upon a visit to one of the chiefs near Nertchinsk.

I passed a couple of days in a most agreeable manner with these secluded and self-devoted people, who have, indeed, undertaken an arduous task. They have been established in the present place more than three years ; during which time they have erected two neat and homely dwellings, with out-houses, small gardens, &c. It is, however, to the generosity of the Emperor of Russia that these very comfortable residences are to be attributed, he having generously paid all the expenses, and given the society a grant of land, free of actual rent or public service. The situation itself is in an inappropriate, although a romantic and secluded spot ; but, as it stands upon the opposite bank of the river to that of the city, the communication is difficult, dangerous, and expensive ;—it is now too late to change it. As yet, the missionaries have not attempted to raise corn, nor do I think it advisable ; the price of labour would be infinitely greater than the purchase of so small a quantity as they require. They have also much more important work to attend to,—I mean the perfecting of themselves in the knowledge of the Mongolian language ; and to this point they have attended with great industry, perseverance, and success. They are now almost masters of that difficult language ; and, when it is considered what have been the perplexities with which they have had to contend, it is really surprising how they should, in so short a time, have nearly completed dictionaries

and grammars. While learning the Mongolian language, they have also become acquainted with the Mantshur, owing to the circumstance of there being no dictionary of the Mongolian, except with that of the Mantshur. Thus the missionaries had to learn the Russian, Mantshur, and Mongolian languages at the same time, and to form their own dictionaries and grammars, which have the advantage of alphabetical arrangement over those in former use, in which the words were only classed under their different subjects. They now speak, read, and write the Mongolian with facility. I saw many translations of parts of the New Testament, which have been distributed about the neighbourhood.

Many journeys have been made into the interior of the country, with a view to form acquaintances with the chiefs and principal people, as also with the lamas or priests. As yet, however, it is a matter of regret, that these very indefatigable ministers have not been the instrument of converting *one single* individual. Nor is it probable they will; for it is only very lately that the Buriats brought their religious books, thirty waggon loads, from Thibet, at an expense of twelve thousand head of cattle. Their tracts have been received, but have never, save in a solitary instance, been looked into. Even their Buriat servants secretly laugh at the folly of their masters, and only remain with them for the sake of getting better food, with less work. It appears to me, that the religion of the Buriats is of too old a date, and they are of too obstinate a disposition, to receive any change. Nor is it much to be wondered at: their own religious books point out the course they pursue; and when the religion of a people, who have been, from time

immemorial, acquainted with the art of reading and writing, is attacked, and attempted to be changed, by three strangers, it is almost preposterous to expect any favourable result. For my own part, so small are my hopes of their success, that I do not expect any one Buriat will be really and truly converted : for the sake of profit, several may so pretend ; but, as long as they have their own priests and religious instruction, so long the Missionary Society will do no more good than simply translating their works, and acquiring the knowledge of a language useless to England. I must, however, humbly add,—that what is impossible with man, is possible with God ! The field chosen on the banks of the Selenga, is, no doubt, the very worst ; and this is known even to the missionaries, but, I presume, it is too comfortable a birth to be given up. I have every respect for them personally, but really I cannot think justice is done to the people of England, to say nothing of the poverty and ignorance of a large portion of the people of Ireland, in squandering money in every part of the world, while there are so many poor and religiously ignorant in our own empire. When we shall have all become good and steady and wealthy Christians, then will be the time to assist others ; and thus, in a few words, I bid adieu to the subject.

The servants attending the missionaries are Buriats, deserted and detested by all their own countrymen, for having forsaken the religion of their fathers, merely for the sake of better food ; they are tolerably expert in cooking, washing, and attending table. Generally speaking, the Buriats have such scanty fare, that I am not surprised at their becoming hypocritical. Brick tea forms their

ordinary food five days in the week ; the poor but seldom taste meat, although they have generally a little fat mixed with their tea, the leaves of which they consume as we do greens, and which thus constitute, upon the whole, a very nourishing dish. The riches of the chiefs consist in large herds of cattle, and some quantities of furs. The number of sheep and goats, in this part of the world, is prodigious ; horned cattle and horses are also very numerous. The Buriats appear a lazy, dirty, but contented, race ; and quite as unmanly, cowardly, and servile as the Kamtchatdales.

The city of Selenginsk, standing upon the right bank of the river, is, indeed, a miserably decayed place,—art and nature seeming to do their utmost to bury it in oblivion. A garrison of one thousand men is still kept up,—to no purpose ; for the locality of Verchney Udinsk must soon complete its ruin. It possesses but one respectable merchant, who has, consequently, an undisputed monopoly of what trade there is.

Selenginsk has also suffered much, of late, from two serious fires, and is, in other parts, tumbling down from the encroachment of the river, which annually makes great inroads. It is but twenty years since the present centre of the river was the centre of the city : the inhabitants have continued to recede as far as possible. Some embankments they made, in the early part of last year, were washed away in the autumn ; and the foundations of many houses will, no doubt, be destroyed on the next breaking up of the river. There are about two hundred dwellings, and one thousand inhabitants, independently of the military. The vicinity is, however, very well peopled ; and there is much corn raised by some colonies of Poles, who are

transplanted hither, by the Empress Catherine, about 1791. They are the only people I have seen in Siberia, who apply manure to their lands, and doubtless receive it again with interest.

CHAPTER V.

**Verchney Udinsk—Tchitta—Baidalofsky—Bolshoy Zavod
—Nertchinsk—Tsurukhaitouyefsk, Kondou—Tchindat
—Khirring—Ashenghinsky—Mogoitu—The Ingoda—
Tchitta—The Hot Baths—The Etamza—Return to
Verchney Udinsk—The Selenga—Kiakhtha.**

HAVING taken our farewell of the missionaries, we retraced our steps to Verchney Udinsk, and felt again gratified with the beauty of the scenery between the two cities, while the rapidity with which we glided along the transparent stream, served not a little to heighten the feeling. Immense mountains of porphyry form the banks of the Selenga, and I have been given to understand that gold is also to be found; but that the natives will give no information, for fear of having a mining establishment placed in their vicinity. At Verchney Udinsk the river expands considerably; and the mountains diverge from one another so much, as to form a very open and rural country. The pastures are especially rich, and very fine timber is to be had; the small cedar-nut is so bountiful as to be exported to all parts of Northern Siberia.

At midnight, with my companions, the inspectors, I quitted Verchney, and by eight in the morn-

ing we had reached sixty miles towards the town of Nertchinsk, forty of them on the river Uda, which flows into the Selenga, near the city of the same name. The country was picturesque until we entered upon the Buriat steppe, void of all cultivation, and of every thing but rich grass. The road proved very heavy for sledges, from the absence of snow. Nothing of the slightest interest is to be seen but solitary post-houses, at every twenty or twenty-five miles. In this manner we reached one hundred miles, when my companions called out to rest, as they were really jolted into a fever: I, however, persisted in continuing the route day and night. At one hundred and fifty miles, we called upon one of the chiefs of the Buriats, whose tribe amounts to twenty-three thousand, reputed to be the largest in the government of Irkutsk. This taisha, or chief, is a young man of good parts, and son to the former chief: I called at his chancelry, but he was out; yet were passports afforded me, in the Mongolian dialect, by his secretary, ordering every assistance to be rendered me by all his tribe, and every respect to be shown to me.

The present taisha has two wives, who live in perfect harmony. He is fond of the missionaries, who frequently visit and lodge with him for weeks together, and is remarkably forward in the English language, which Mr Swan is teaching him. It is but very lately that he lost his father and mother, who were rich; but he has been greatly impoverished by his mother's bequeathing her immense property to the lamas, or priests. His possessions are about three thousand sheep, three hundred horses, and two hundred horned cattle; whereas his mother had forty thousand sheep, ten thousand

horses, and three thousand horned cattle, besides a very large property in furs. One of the sisters of the present, who was lately married to another chief, received, as a dowry, forty cases of furs of the richest kind. These are customarily worn till they actually drop off—such is the neglect and filthy manner in which they live. The women are, on their marriage, dressed in satins and silks, bordered with furs ; the occasion being honoured with the same respect as their great feast in the month of February, which appears to be a sort of religious feast, in imitation of the Chinese. The chiefs and subjects live together almost indiscriminately. The chancelry of the taisha contains fifteen clerks and a secretary, who carry on a most extensive correspondence, and it may be considered as exceedingly well regulated.

At sixty miles onward I breakfasted at a beautifully situated post-house ; but, with the exception of two or three agricultural villages, and those near the post-houses, there is neither cultivation nor inhabitant along the country. We now met with some lakes, and passed a monument erected to the memory of the late governor's wife, Mrs Treskin, of Irkutsk, who was travelling from that city to the warm baths near this place, when the horses taking fright, she was literally kicked to pieces, while, strange to say, her two attendants and gallants remained unhurt. The circumstances altogether are of so horrid a nature, that it would have been impossible not to lament the accident, if the character of the unfortunate woman had not fully justified the remark which I heard made, that her friends would have consulted their own and her interest much better, instead of raising the memorial, to suffer her name to be buried in total obli-

vion. At sixty miles farther we reached a Buriat village, where we were plentifully supplied with a small species of trout.

The road was still very bad, being a vast plain, and having but little snow upon it. The indentations of the hills were, however, well wooded, and the scenery was, upon the whole, picturesque. The country thence continued low and sandy till I reached the village of Tchitta, the river near which is a considerable stream, running into the Ingoda, which unites with the Amour, and is ultimately lost in the Eastern Ocean. There is a beautiful little village, called Tchindat, upon an island in the river beyond which the scenery much improves. The drive down the river was very delightful, from the ever-changing views which were offered to us—the bold, magnificent, and barren rocks looking at once grand and terrific; nor was this sublime scenery less acceptable, when contrasted with the beautiful and fertile pastures everywhere around; with here and there a straggling cornfield, and a hamlet smiling through the dark woods which lay at the foot of the mountain precipices; or winding round and diminishing, as the valleys continued to recede from our view. At six in the evening, we reached the village of Baidalofsky, upon the left bank of the Ingoda, which here assumes a treacherous appearance, affording but a very unsafe journey over it. The stream is so rapid, that it is seldom frozen for any length of time. We were twice upset into the river, and lost one of the horses. Indeed, such was the state of the weather, that no greater degree of frost than 15° had been observed since I left Verchney Udinsk.

We now began to hear favourable accounts of the exertions of the new chief of Nertchinsk, who

had materially ameliorated the condition of the convicts and peasants. Again my companions began to lament their hard duty, and requested me to halt and pass the night comfortably in a post-house. I, however, persuaded them to continue seventy miles farther along a river which continually gave under us, and in no slight degree alarmed one of my friends, who was certainly born for other scenes than travelling in Siberia, unless in the easiest and most commodious manner. We were obliged at last to walk along the banks of the river, from the impossibility of getting the horses along. The thermometer, as we approached Nertchinsk, fell to 28° Reaumur ; and although I had but my simple *koklanka*, or leathern frock, I felt nothing but anxiety to push on, aware that if I could not return within a certain time, I should not be able to quit Irkutsk before the month of May.

The scenery was now very fine : elevated perpendicular bluffs, with pretty cultivated valleys, and several pleasant villages. The river Ingoda also assumed a more considerable appearance, widening as we reached to the eastward, and, at the city of Nertchinsk, being really a formidable channel. We reached the city late in the evening ; its distance from Verchney Udinsk is about five hundred miles. Having waited upon the three chiefs, and delivered our credentials, Mr Strannack and I sallied out to view the place. It is vilely built, widely scattered, badly situated, and worse inhabited, containing two hundred dwellings, and one thousand inhabitants. Three tolerable brick edifices are the only objects worthy of notice in it : and, except that it has a church, it is merely a larger picture of any Russian village.

The site of the city has, within a few years, been

removed hither, a circumstance which may, in some measure, excuse its miserable appearance; but nothing can atone for its present bleak and exposed situation, without even fire-wood in its vicinity. The site of the old town was far superior, affording shelter and many conveniences which are not now to be obtained. The town of Nertchinsk stands at the junction of the Shilka and Nertcha rivers, uniting with the Amour, of which, however, there is no part within the limits of the Russian empire. I was hospitably received by the different officers, especially the town-major, who distinguished himself in the late French invasion.

We quitted Nertchinsk for the Bolshoy Zavod, or Great Fabric, distant one hundred and eighty miles, and over a highly picturesque park-scenery, reminding me much of the upper banks of the Irtish, where the hills appeared as if placed upon a fertile plain, without any sort of communication with each other. The rocks are extremely bare, and, with the exception of wood in the valleys, there is little or nothing of cultivation to be seen. The thermometer now fell to 35°, and the air assumed a chillness I had not for some time been accustomed to. The soil is, however, so rich, that corn villages are every where to be seen all the way to Bolshoy Zavod, which shows an active encouragement on the part of the chief, of those more immediately under his eye and command. The fact is, that, in consequence of the numerous desertions upon the high-road to Verchney Udinsk, it is not the wish of the government to render the country either populous or cultivated. On the contrary, every thing possible is done to make the country so impassable, that deserters may be obliged to resort to the post-houses for subsistence,

where they are secured, and sent to the prison of Verchney Udinsk. Should they take the route of the Tongousi, or Bratsky district, they are certain of being shot by the hunters or chiefs, unless they produce a passport from the chief of Nertchinsk. The inhabitants occupying the corn villages are all exiles of the upper sort, and yet as ill-looking a class of people as I ever beheld. I was glad to pass them in safety, although at the price of being upset in a dangerous manner. We were, however, rather frightened than hurt, and reached safely the Zavod, or Chief Fabric, late in the evening.

A sound sleep, which we had not enjoyed for many days or nights, qualified us to pay our respects early the next morning to the chief, whom, with his son-in-law, I remembered as serving at Barnaoule during the time I visited that place. A large feast had been held to honour the marriage of a doctor to a pretty plump woman, with a little money; and I consequently found the people in silks and satins, and otherwise so daubed, that I began to augur ill of the place. It is the most miserable, yet extensive, assemblage of huts I have any where witnessed. Even the residence of the chief is but to be compared to two or three quarters joined to one another.

I saw nothing at Nertchinsk which could inspire me with any other sentiments than those of contempt and indignation at the inconsiderate conduct of the persons in authority over the poor criminals. It is impossible to conceive the haggard, worn-down, wretched, and half-starved appearance of these victims. Whatever may have been their crimes—and I believe them horrible enough—they never can have authorized the present inconsiderate mode of employing them. The knout, the whip

rand, and the fetter, are nothing, when combined with the imposition of labour, continued from rise to sun-set for six months in the year, and for the other six to keep them in absolute idleness.

The cutting of wood, getting in of hay, or riding upon officers, is almost denied to the convict, from the fear of his deserting. Alas! where can he go?—To places equally wild and dangerous? to those where the brute creation would cruelly torment him with those of his own species.

The man who is sentenced to drag out the remainder of his existence in the mines of Nertchinsk, cannot live long. What have become of many thousands of beings sentenced annually to this place? where are their wives and families? where the work is carried on only by the continual arrival of fresh victims. Of Ekatherinebourg I certainly formed a low idea, but Nertchinsk is reality, the only place that I have seen where man is treated harshly, throughout the Russian Empire—I except the aborigines of Siberia. I did not have expected and have hoped, that the principal chief of this place would have taken a lesson from the well organized establishment of Barnaul, and where he served for several years; of humanity and consideration every where apparent in the acts of that government. Why not the exiles and peasants of this place, like the people of Barnaoule, be allowed every alternate day to themselves? It would be better both for the government and the exiles, if they were banished from this world at once, and the expense of their transportation would then be saved.

The principal fabrick, or Bolshoy Zavod, contains about four hundred yourtes, and three thousand individuals. No one dwelling, whether of

public or private property, has even a decent appearance ; they are all, in fact, huts : and such is the sterility of the soil, and such the severity of the climate, that no spar is to be had of a greater length than eight or ten feet, and even that comes from a great distance. The situation of this fabric corresponds with its condition ; it is in a deep hollow, surrounded by high and barren rocks, as bleak and dreary, and as inhospitable a place, as can be imagined. The allowance to the criminals is on a par with every thing else,—it is thirty-six roubles, equal to twenty-seven shillings, a-year, to procure them food, raiment, firing, and lodging. The winters are considered as severe as in any other part of Siberia ; for this, its eastern situation will sufficiently account. The demand for warm clothing and firing is, by consequence, comparatively great ; and the climate is in short such, that the fabrics cannot be worked during the winter.

Nertchinsk, in all its concerns, reminds me forcibly of those pathetic descriptions of the mines of Siberia drawn by romantic writers ; here their ideas are verified ;—yet it cannot be supposed that the government of the country is so lost to feeling, to humanity, and good policy, as to wink at conduct of the kind. They must certainly be ignorant of what is doing, and of what the criminals suffer ; yet how, then, can we account for a continuance of such severe treatment, after the visit of the celebrated Mr Speranski ? This is, indeed, a serious question, and charge. Since my arrival at St Petersburg, however, I have been informed, that it is the intention of government to give up the establishment at Nertchinsk altogether, and withdraw the people : a determination which I hope originated with Mr Speranski. It is indeed

better policy than the old system of oppression, and yet bad enough, for the district is highly productive and valuable.

There are six silver founderies, namely, Nertchinsk, Doutcharsk, Koutomarsk, Ekaterininsk, Gazimoursk, and Shilkinsk. There is also a new foundery, named Petrofsk, for the casting of iron for the use of the silver founderies. The thirteen principal mines, when worked, produced formerly about a million of poods of ore, or three hundred poods of silver, per annum; which is nearly one pound weight of silver for every four thousand pounds weight of ore. The present proportion is one-third less, or from one hundred and eighty to two hundred poods of silver per annum, besides twenty-five thousand poods of lead, which is of no service whatever. When the transport of this silver to St Petersburg, by especial conductors and guards, is calculated, together with the maintenance of the establishments at Nertchinsk, and a large military and Cossack force, who must be fed from Irkutsk, I need scarcely say, that the whole is a ruinous as well as cruel concern. What is half a million of roubles—what are twenty-five thousand pounds to the Emperor, the produce of forty-eight thousand and twenty-seven individuals, or ten shillings and five-pence per head per annum, being the value extracted from the mines of Nertchinsk? The following is the population:—

Staff Officers	78
Unclassed Officers	699
Convicts in the mines	2,458
Persons released from labour	1,216
Boys, who do, or do not, receive maintenance from Government	1,611

Total Male Convicts 6,062

	Total Male Convicts	6,062
Female branches of the above		6,098
Peasants attached to the founderies		17,773
Females, ditto		18,094
	Grand Total	48,027

Of these, there are actually but sixteen hundred and two able-bodied men in the mines, and these are guarded by five hundred and sixty-four inferior officers, to prevent their secreting gold, silver, or precious stones.

Although the chief and various officers had the politeness to invite me to some entertainments, which were to be given in the course of the week, I declined them from a feeling of the apparent and real misery so visible every where, that a heart alive to any sense of humanity, or kind feeling, could not fail to contrast the state of the two classes in this city of huts. At most, such conduct would only stifle better and more praiseworthy thoughts. Even in the dissipation of a ball-room, I could not discard from my mind the abject distress and misery every where prevailing, and I felt it necessary to follow the example of Mr Speranski, who also remained here but one day. I am certain that the goodness of his excellency's heart must have prevented his remaining to witness such a scene. Departing for Tsurukhaitouyefsk late in the evening, I arrived early the following morning, the road being very good, and the country, latterly, interesting; the distance is sixty miles. Tsurukhaitouyefsk is a large village, called a fortress, on the banks of the Argoun, unlike the city and chief fabric of Nertchinsk. It did my heart good to see to what a state of comparative perfection the numerous vegetable gardens are brought in

this industrious place ; the order, cleanliness, hospitality, and happy state in which the inhabitants appear to live, are too apparent to be passed over in silence. They are principally Cossacks, who have certain privileges and protections, which cannot be infringed ; they are, both officers, and privates, generally a rich and generous and noble people. In short, the inhabitants, along this line of frontier, are all that is understood in the word Cossack. The vicinity abounds in the richest metals and minerals ; but is, as I have shown, of no great value during the present system of policy. I saw a tolerably good collection of minerals, in the possession of an old Russian, who takes great delight in showing, and, being a poor man, is naturally desirous to dispose of them, but does not appear to know their value. He demands about two hundred and fifty pounds for the collection, a prodigious sum in that place, but a single specimen might be worth the money, if brought to this country. Its weight is one hundred and seventy English pounds, and it is composed of so many minerals, that he calls it the "Mother of Minerals." Among other specimens, were an amethyst, a noble topaz, an aquamarine, onyx, and several beautiful crystals, besides many thousands of small specimens. The whole of these precious stones are imbedded in frozen sand, and, I should think, it would require great care and difficulty to remove it entire. Of the Scotch pebbles, the large size and the beauty of the veins were really astonishing. I made him an offer for one of the specimens, but the old gentleman would sell no less than the whole. Being introduced to him by the chief of the Cossacks, and upon hearing my name, he remarked, that he had read it in the Gazettes ; adding, that as this world

appeared too small for my movements, he expected, ere long, to hear of my arrival in the moon.

We quitted the fortress, and resumed our journey along the lines ; by midnight we had made but thirty miles, along a snowless desert pasture. The night was exceedingly cold, and I suffered from want of exercise, being in an open sledge: the thermometer stood at 36° . My companions here became alarmed at the difficulties which presented themselves against our progress, as well from the want of snow, as from that of horses. They consequently determined to return by the route they had come ; but, for myself, I had long made it a settled plan never to go over the same road, while another is practicable, and, therefore, resolved to proceed alone. I felt regret at parting company with my friends ; but it must have taken place soon, as, from their continual stoppages for rest and refreshment, I must have determined to outsail them. The quantity of their baggage, with three servants to attend them, rendered it also impossible for them to keep pace with me, who was alone, with a knapsack only ; and, indeed, the inconveniences and difficulties which afterwards happened to me, proved the prudence of their decision.

I reached Kondou, forty miles, by a fine road, having previously come through a small fabric, the director of which presented me with a few mineralogical specimens. Kondou is an ancient place, and considered to be the same with Tchindaturukouy, the birth-place of the conqueror of China. I saw many remains of large Tartar ovens, but nothing that excited my curiosity so much as an old lady of ninety-three years of age. She was born in the vicinity of Nertchinsk, and was now not only in the full possession of all her faculties, but in

strong health, and capable of attending to the cares of her house and family. I had a most excellent dinner prepared for me by her own hands, and left her, highly gratified, to pursue my journey over the immense pasture, passing through droves of three or four thousand horses. The country became more sterile, but somewhat more elevated as I reached an hospitable dwelling on the river Borgie, and then the fortress of Tchindat, situated near the little river Onons, which contains sixty dwellings, a party of Cossacks, and nothing besides. At four miles from it, I passed through a large village of Russian agriculturists, who live here free from all the cares of the world, but those of the tax-gatherers, against whose extortions I heard bitter complaints. The raising of corn appears to be pursued with some difficulty; but success attends the breeding of cattle. The inhabitants I have found civil, hospitable, and obliging, when properly applied to, but otherwise both ignorant and obstinate.

At the next place I was attended by a Cossack, and a guard of honour was mounted, and a sentinel placed at my door to await my orders. The reports were also made to me, and, with this increase of apparent importance, I continued my route until I reached the half-way village between the fortresses of Tchindat and Kharinsky, almost shaken to pieces, from bad roads and a worse vehicle, a common and open téléga,—the total absence of snow rendering it necessary to proceed with wheels. To the south, the hills began to make their appearance, and of course offer inducement to look about, after the late dearth of scenery. I here met with the first Tongousian Cossacks. They subsist on a salary of six roubles, or

four shillings and sixpence *a year*, without bread or clothing; yet is a sword held up by these half-naked wretches. They are, in general, a miserable set, but more particularly so at this moment, when their occupation prevents their going in search of fish, game, or furs. I found them a contented, and even a happy people, if possessed of a couple of cows or horses. The Cossacks treat them well, and feed many of them, whom they employ as servants. Nothing will induce them, however, to pass a night in a house, so long as they have their own miserable *yourte* to go to. Indeed, I recollect one of the chiefs contrasting the wholesome, free, and fresh air, which pervaded his *yourte*, to the stifled heat of a house. I think he was right in his choice.

In all the villages I had lately passed, along these lines, there was nothing but lamentations; a veteran battalion, which had been stationed there for twenty years, was ordered to the government of Tomsk, distant about two thousand five hundred miles. The women and children could not accompany them. Their only riches consisted in a comfortable dwelling, a vegetable garden, and possibly a cow; with these they lived content and happy. Now they will be sold for a trifle to the Cossacks who remain. The case is indeed a very hard one, but admits of no redress.

From the village of Khirring the scenery improves; the soil assumes a dark mouldy appearance, and a good many corn-fields are scattered about. The river Onons runs along the valley which now formed my route. In descending one of the hills the horses took fright, and got the better of the driver, who, foolishly enough, turned them down, instead of up, the hill, and this not only upset, but broke the vehicle to pieces;

ual, I escaped unhurt, though almost miraculously. We crossed the horses, with the baggage shed upon them, and reached a village, all safe, distant ten miles from the scene of the accident. Here I found an economical granary, upon a plan which might be well copied by the inhabitants of more civilized countries. Every head of a family rees to reserve a certain proportion of his grain for the consumption of the following year, in the event of a scarcity. It has only this difference from the savings' banks in England,—that, in the one case, it is to prevent future famine, and, in the other, future poverty. Upon my journey to Moulton, I was again upset and nearly dashed to pieces; the horses going down a steep hill, set off at full speed, and hauled the driver, myself, and baggage, down the descent at a wonderful rate. Again, however, Providence protected me, and the accident had no disastrous consequence. The horses, it seems, are aware that winter is not yet over, and they do not like to be so early put to wheeled vehicles. There has seldom been known a winter in which there was so great a want of snow, not even the hills retaining a vestige of it. The misfortunes of this day operated upon me so powerfully, it being my wife's birth-day, 24th January, O.S., that I determined no longer to defy the Fates, and accordingly tarried for the night. I had come over a hilly and well-wooded country of considerable cultivation, as also towards Ashenghinsky, the fortress most south-east of any on this side of the frontiers between China and Russia. The distance to Ashenghinsky is thirty miles; it is like Tchindat and Tsurukhaitouyefsk, a fortress, containing sixty Cossacks and an officer, who is other to the commandants of those other for-

tresses. The village of Ashenghinsky is pleasantly situated, and no person is permitted to live beyond it. Betwixt that place and Kiakhta there are two or three other fortresses, but no communication between them, except by the foot of the mountains which divide the two empires of China and Russia. The whole distance to Kiakhta is five hundred miles, which cannot be accomplished on horseback, with the same horses, in less than ten days. I had not so much spare time, and therefore reluctantly retraced my steps to Mogoiton, with the design of getting upon the great route, one hundred miles from Tchitta, and thence to Kiakhta, which I calculated could be done in four or five days. The evening was past in celebrating my wife's birth-day, with a good supper and a glass of punch. My host, however, had taken it for granted that I was a bachelor.

Next morning I departed, and overtook about a hundred of the veteran battalion, who had been stationed upon the southern parts of the lines. I could not help smiling at the officer in command, as he put his head, enveloped in a night-cap, out of a cart to salute me; he was besides wrapped up in furs of various sorts and colours. I recollected that, when I served in Canada with seamen, I considered it as shameful to ride while the sailors walked, for I did not consider myself as a judge of their fatigues or sufferings, without thus partaking of them. I shall, however, offer an excuse for this officer, who had certainly passed his grand climacteric. The road was sandy and stony, and but little pasture to be seen, yet the valleys presented scenes of interest. The little river Onon runs along the main valley, which is miserably inhabited by Raskolnicks or Polish schismatics.

one hundred miles, I reached the Ingoda river, over a poor and sterile district, which does not even afford post-houses ; and being without any attendant or Cossack, I found great difficulty in getting on. The people were not only uncivil, but inhospitable ; so much so, that we frequently passed stations or villages without receiving any food ; a circumstance I the more felt, as with the real Russians, or aborigines, I had always lived in clover. The carts hereabouts cannot go ten miles without some accident, and it requires no little ingenuity to repair them upon the road, so as to enable the traveller to reach the next station. Upon regaining the river Ingoda, we were again in the vicinity of snow, which enabled me to have recourse to the sledge, the safest and most comfortable way of travelling. I thus reached Tchitta early in the morning, where I found all bustle and confusion, awaiting the arrival of one of the most amiable men I know, namely, the governor of Irkutsk, Mr Tzedler. I almost regretted meeting his excellency, as it seemed only to part with him ; and yet I could never have quitted Siberia, without saying adieu to that man and that family, whom, in all Asia, I most loved, and to whom I am so much indebted for kindness and friendship. May health and happiness ever attend both him and his ! My route towards Verchney Udinsk was not marked by any thing peculiar. I moved along at a quick rate, till, in crossing the dreary and stony steppe, the vehicle was knocked to pieces, there being no snow upon the ground, and I was consequently compelled to walk the rest of the way.

I reached Verchney Udinsk late in the evening, and waited upon the town-major ; after which, I determined to visit the hot baths, that I might bid

adieu to the female part of the governor's family. Having procured a Cossack and sledge, I departed at midnight, and the next evening reached the baths, distant one hundred and thirty miles; but on what sort of road, or over what sort of country, I was perfectly ignorant, fatigue having quite incapacitated me from noticing. I was most kindly received by the ladies, and induced to stay a day with them, during which I inspected the baths, hospitals, &c. which I found upon a tolerably good plan, with many conveniences. The water of the baths may be tempered from 160° downwards; they are strongly recommended for the cure of all chronic and rheumatic diseases, and are proverbial for the cure of that disease, which may be called the plague of the peninsula. There is little difference between those of Malka, in Kamtchatka, and these; both are sulphureous. There are many springs, the largest of which is two feet square and one deep. A thick dense fog continually hovers over the place, which, I think, contributes to the facility with which the fine vegetables appear to be raised. An overseer is appointed to look after the buildings, receive the rents, and keep a journal. He has a few workmen under his directions, and, with the excellent accommodations of his own, a sort of boarding-house, he has altogether a comfortable place. The site is highly picturesque, being but three miles from the lake Baikal, which is seen in all its magnificence from a little eminence at the back of the hospital; the country round is thickly wooded, and provisions are not dear. It is directed by the colonial government, at little or no expense to them; yet it is a pleasant resort during the months of March and April, after the fair of Kiakhta, when all the rooms and cottages, &c.

blic and private, are crowded with merchants and their families.

I imprudently continued in a bath for a quarter of an hour, and made myself very weak, yet persisted in immediately retracing my steps to Verchney Udinsk, having bid adieu to my kind and amiable friends. My route lay through a thick forest, to the borders of the Baikal; after which I coasted along the outer edge of the ice for eighteen miles, a distance easily performed in one hour and a half; thence through a thick forest of lofty pine-trees. The beauty of the route is surprising, and is the work of the late governor Treskin. I passed, at a prodigious rate, along the picturesque but well-fenced banks of a mountain; the horses were excellent, the drivers a set of fellows equally accustomed to whip and be whipped,—i. e. a desperate crew of convicts, sent here for this express service. After midnight, my route lay over numerous lakes, some of them of so poisonous a nature, that many of the convicts lost their lives, while forming the road a few years ago. Ducks, geese, and other birds, cannot live after drinking of the water, though it appears that swans offer an effectual resistance to the poison. I saw many of them swimming upon the principal lake; for, whether from fear or superstition, they are never disturbed by the inhabitants. The journey was rendered very unpleasant from the superior respect which my Cossack paid to his own comforts, monopolizing nearly the whole of the cart, and snoring in such a manner as effectually to prevent myself, as well as the driver and horses, from getting any rest whatever. The inhabitants upon this by-road are regular Russian schismatic convicts, and a more Tyburn-like set I never beheld. Woe to him,

either in person or pocket, who travels as I did, without prepared provisions!—generally they are too obstinate to sell any thing, and, when they do, will charge five hundred per cent upon articles of necessity; sooner than yield to which, I, at many villages, went *sine* food.

Upon the river Etamza I made fifteen miles, when I entered upon the Selenga at its conflux with the latter river. The morning was very cold and windy, and almost too severe to allow our progress at any rate; but my anxiety to get on, backed by a dram of spirits to the drivers, induced them to continue, and I, for the fourth time, reached Verchney Udinsk, the latter part of the scenery being lofty and well wooded. My reports having been delivered to the several chiefs, I dined with them, and then departed for Kiakhtha, one hundred and fifty miles distant; the first twenty-five of which were over the mountains, passing through a large village of one hundred peasants' dwellings. The road thence proving very indifferent, I descended the steep banks of the Selenga, pursuing my route along the river, and reached in good time the missionary station. The inhabitants had been expecting me for many days, not imagining that I would cross the country, or proceed beyond the Bolshoy Zavod, which to them appeared impossible.

I breakfasted with these devout gentlemen, and then proceeded for Kiakhtha, the first station to which was twenty miles along the Selenga. The route is at present dangerous, the river having given way under the numerous loaded waggons which crossed a tender part of the ice, at a time when the thermometer had shown for two days 2° of heat. Along the Selenga, passing through

miles of dreary scenery, with only a few miserable villages to be seen, I reached the point where the road turns off from the river ; and that which leads to the Chinese frontiers is continued over a more open, wooded, and, of course, interesting country. On reaching Kiakhta, the hills rise in a commanding manner, spreading out in various directions, and forming beautiful, but unproductive, valleys. Every thing, in short, denotes a frontier situation, and something seemed to say, that here were the limits of two mighty empires.

CHAPTER VI.

Kiakhta—Cliutchie—Selenginsk—Irkutsk—The Angara
—Nishney Udinsk—Illan—Krasnojarsk—Yenisseisk—
The Black river—Atchinsk—Bogotova—Kemtchiega
—Perecoule—Tomsk—Tashieka—Tchien—Kainsk—
Barabinsky steppe—Vosnesensk—Yalanka—Zavolga-
ka—Omsk.

THE barracks and storehouses upon the banks of the little brook Kiakhta, before the entry of the fortress so called, have a pleasing appearance. This is a neat and regularly built town, with four hundred and fifty houses, and four thousand inhabitants, a larger proportion to each dwelling than is probably to be found in any other part of the Russian empire. The little brook of its own name serves as the boundary of China and Russia, upon the right bank of which the fortress stands. Kiakhta is considered healthy, although the water is not good ; but, for the more wealthy inhabitants, the essential article of subsistence is brought, at a considerable expense, from a distance of two miles and fire-wood from a distance of twenty. The soil is so poor, that even common vegetables are with difficulty raised.

The district of Kiakhta is governed by a

called a director, who has also the administration of the custom-house department, and unites in his own person the judicial, political, military, and commercial superintendence. The two former offices are subject to a revision from Irkutsk, but the latter are dependent only upon the approbation of the cabinet. The situation of the director is one of great importance and trust, as well as of considerable personal emolument. The present officer has held it twelve or thirteen years, during which time he has doubtless had the means of amassing a most princely fortune, if his inclination lay that way ; he is, however, not yet disposed to quit his command, and appeared to me to be a most honourable, intelligent, and indefatigable servant of the emperor.

Kiakhta, I have already said, is a regular, well-built town ; but beyond this it can never reach, so long as the jealousy and envious policy of the Chinese are maintained. No stone buildings are allowed to be erected, except only a church for public worship ; and, though situate in a dreary sterile basin, it possesses many comforts. Beyond the fortress, and immediately opposite to Maimatchin, is the town of commerce, now called Old Kiakhta, the residence only of the merchants, no officer or stranger being permitted to sleep in it, according to an article of the treaty of both empires. I visited Old Kiakhta in company with one of the most respectable merchants, agreeably to the request of the director, and found it to contain forty-five dwellings, many of which are very superior edifices, and have within them very rich stores. Under the countenance of the same respectable merchant, I continued my route towards the Chinese fortress, for so it is called, distant about two

hundred fathoms from the old town of Kiakhta. Of all the celebrated places I have seen, and which have nothing to support their celebrity, Maimatchin is the most eminent. It is a small, ill-built, mud town, with four narrow mud-paved streets, running at right angles ; containing, during the fair, from twelve to fifteen hundred men and boys, for the female sex are prohibited. The houses are without windows, and there is a total absence of every thing that can interest even the most ignorant or careless. Such, then, is Maimatchin, which reminded me much of the old Moorish towns in the south of Spain and Portugal, and of those situate along the northern coast of Africa. The absence of windows towards the streets may be pardonable, as at least not mischievous ; but to the absence of the fair sex is mainly attributable that dreadful degeneracy which is said to pervade all ranks of society among them. The streets, as well as the dwellings, are clean ; the latter are approached by a narrow court, on each side of which are the storehouses. In the centre of this oblong square is the actual residence where the Chinese live, eat, drink, smoke, sleep, and carry on their business ; and it is divided into two apartments. The first is appropriated to the sale of goods, which are fantastically displayed ; and fires, candles, brass stoves, and ovens, meet the eye at every corner, in the centre, or wherever the person may be who wishes to light his pipe. The other apartment is appropriated to the guests for eating, drinking, &c. and differs from the first in having a raised platform, which serves for a bed or dining-place ; upon this, during the day, the blankets, pillows, and cushions, are neatly rolled up, and ornamentally arranged.

The fixtures of both apartments, which are richly prepared, are of mahogany, brightly polished.

I paid my respects to half-a-dozen of the principal Chinese merchants, some of whom are well versed in the Russian language. I was every where received with affability and hospitality ; tea, liqueurs, dried fruits, cakes, punch, and cigars, were immediately placed before me ; and much interest seemed to be excited at finding an Englishman in that distant part of their empire. I was asked if I had been at Canton ; and on replying in the negative, was recommended to go there. The English, I was told, carried on a vast trade at that port ; and that as I had come so far to see such a vile place as Maimatchin, I could easily go and see Canton. I found these Chinese extremely courteous and communicative ; but they were much distressed when I told them that I employed a Chinese servant at Irkutsk. They could not understand how one of their celestial descendants could think of living in the Russian empire. The fact was, that Captain Rikord had a Chinese servant, who went from Canton to Kamtchatka expressly to serve him. He had been in London some time, and was a good servant, speaking various languages, and would very gladly have followed me to England.

They have lanterns placed at regular distances, and lighted at a proper time ; and cotton and silken bags, false bells, and other absurdities, hang about the exterior of their dwellings. I visited their temple, which, notwithstanding its idolatrous purpose, has much of the Romish character about it. I saw no images of female saints, but numbers of gigantic men and horses, and the whole was evidently the same sort of glittering, carved, and gilded work, as the most tawdry Romish church

or chapel can boast. The Chinese temples, however, have this difference,—that real valuables are not to be seen; neither gold, silver, nor jewels, nor even the semblance of them, being placed about their images. I do not know whether this is the case in other parts of China.

There is no fortress or defence to Maimatchin, though from three to five hundred souls remain in the village during the spring, summer, and autumn. Trade continues during the whole of the year; and there is no ceremony observed on either side on entering the Russian or Chinese villages. The best understanding exists, and each party alternately entertains the other. At this moment the Chinese are employed in cards, draughts, chess, drinking, dancing, and singing. In the month of February is their chief festival, being what is termed the White Month, or the beginning of their new year. The principal feasts last three days, that is, from the day before to the day after the full moon, and then the fair commences. The Russian chief also gives a feast to the chief mandarin, and the principal Chinese.

In reply to a question I put to one of the merchants, I was told that the distance from Kiakhta to Peking is one thousand five hundred miles; but that a courier can go in ten days, although it takes thirty days for the merchants with their goods. I was informed also that it is about one thousand miles from Kiakhta to the frontiers of China Proper, and that the road is across the Mongolian well-peopled territory. The Mongoles are only far dependent upon the Chinese, as to permit them to pass and repass in their country unmolested being paid for the hire of the horses, &c.

For an account of the trade of Kiakhta, &c.

manner of carrying it on, and which is a mere matter of exchange or barter, as not the smallest credit, even for a moment, is given by the Chinese, although it is by the Russians, I may refer my readers to Mr Coxe's very valuable work. The mode of trafficking is there accurately described, the work and risk still falling upon the Russians; the latter sending their goods in the first instance, and then receiving their teas, &c. The chief articles of import into Russia are teas, cottons, nankeens, silks, and good satins, a considerable quantity of rhubarb, many articles of curiosity and ingenuity, and some trinkets. The exports from Russia are, in general, furs, i. e. foxes, sables, river and sea-otters, wild cats, beavers, and millions of squirrels. The lightness, warmth, durability, and cheapness of the latter, have made them a favourite with the Chinese; and it is remarkable, that the most rare and valuable furs do not fetch a good price with the Chinese, as they prefer the worst and most common. The best and most valuable are sold at Moscow and Nishney Novgorod, for the use of the Russians, Turks, and Persians. A large quantity of woollen cloths and copper money is also exported; and such, upon the whole, is the trade between Russia and China, that it yields a clear revenue of about seven millions of roubles, or three hundred and fifty thousand pounds per annum, a sum which in Russia is equivalent to three millions in England. The exports and imports are averaged at thirty millions of roubles, or a million and a half sterling. Last year, three millions of pounds of tea were imported into Russia; but this year the tea, as indeed every other trade, is far from brisk. There is an immense stock of furs in hand, and this surplus is caused by the war

between the Greeks and Turks. Forty sables, which are commonly averaged at eight hundred roubles, will now scarcely fetch three hundred and fifty. The Chinese know this, and are actually feeding upon the war alluded to.

I returned from the Chinese town late in the evening, and enjoyed two days in the society, hospitality, and friendship of the accouratnoy (that is, the peculiarly correct) chief. The propriety and decorum visible in the establishment of this gentleman, the accomplishments of his very amiable lady, and the superior education of his infant family, are of more value, and far more interesting, than any thing else I had seen in Kiakhta. Among other instances of attentive kindness on the part of the chief, I may mention my having been presented with a curious map of the Chinese Empire, with Russian notes, and which will be found, by those who are desirous of seeing it, in the British Museum, to which I presented it. Provisions are dear, bread, fifteen pence for forty pounds; meat, one penny a pound, and other things in proportion. The merchants live well, and evince an air of liberality and good faith which I have not seen, with people of their class, in other parts of Siberia or Russia. Some of them are immensely rich, having settled here from Moscow, Kazan, Tobolsk, Irkutsk, Wologda, Kalouga, and Nishney Novgorod. One of them, a Mr Siberikoff, belonging to Irkutsk, and who has been three times elected mayor, has lately opened a new and splendid residence to his friends, the bare walls of which cost two hundred thousand roubles. The whole expenses, including its magnificent furniture from Europe, will, it is said, cost him at least twenty thousand pounds, a prodigious sum for a mansion in Siberia.

Having seen all that I thought interesting in and about Kiakhta, I quitted it upon the third day. My route lay along the right bank of the Selenga, a rich pasture level, interspersed with Buriat villages, whose inhabitants received me with every distinction and obsequiousness, in consequence of my Mongolian passport. At forty miles, I crossed the little river Jackoy, and, coasting it for twenty miles, reached a large Russian village, Cliutchie, containing one hundred houses, and near five hundred inhabitants. The soil had, in general, been sandy, and there was a good deal of pine-wood on it. Being in an open cart, I suffered much from a strong cold wind, but persisted in continuing my route, that I might not be too late for the winter road from Irkutsk. In the middle of the night I was overturned; but to these occurrences I had, of late, become so accustomed, that I scarcely noticed it, beyond feeling thankful for another fortunate escape. The latter part of the journey was over a hilly and sterile country, yet pasturing many flocks of sheep and goats, appertaining to some Buriats, who are rich in this neighbourhood. Early in the morning, after a cold and unpleasant night, with the thermometer at 30° of frost, I reached, once more, and for the last time, the abode of the missionaries. A dram, a hearty breakfast, and a more hearty welcome, soon made amends for all my disasters.

Being Sunday, I was the sole auditor of a long and extemporary sermon, from Isa. xli. 10. "Fear not, for I am with thee." It was the first I had listened to for three years, and was therefore highly acceptable. The text was remarkably appropriate, and the discourse directly adverted to protection I had received from above, during

my past, and yet unfinished, pilgrimage. After divine service, I partook of a farewell-dinner, and bade adieu to these worthy and zealous missionaries, regretting only that a more active and more useful station had not been assigned to their present unpretending and important occupation.

I visited a small dock-yard, in which vessels are built, on an island at the junction of the Jackoy and Selenga, and which are employed to transport the merchandise from Kiakhta to Irkutsk, and down the Angara to the Tongouska, &c. From what I saw, I should term them clumsy and heavy galliots.

I heard, with surprise and regret, upon my arrival at the town of Selenginsk, that my traveling companions, the post inspectors, had passed through, on their way to Kiakhta, without staying for an adieu. They knew it was Sunday, and probably feared the effects of a sermon. I took the summer road to Verchney Udinsk, which is distant from the right bank of the river some miles. It is a hilly and sandy country, well-wooded with pine. On reaching Verchney early in the morning, I found all bustle and anxiety to see their new governor-general. The officers appeared to me to be suspended between hope and fear, and I could not help smiling to see their guilty consciences fully depicted in their faces. Being well assured that his excellency's arrival would take place the following day, I determined to await it, to express my acknowledgments for his kindness and consideration.

In the mean time, I found good quarters and excellent society at the abode of the okroug chief and his young bride. The governor-general arrived, as I had predicted, with all his train.

staff. His excellency's plain dealing and honest speaking soon put the whole city in perturbation. Very few compliments passed, and, I believe, his excellency will be, though more disliked, as long remembered and respected for his integrity as the late governor-general, Mr Speranski ; for the present chief, like his predecessor, has struck at the roots, as well as lopped the branches, of corruption. His excellency appears determined to put down those abuses. I fear, however, the task will prove difficult, unless the situations of the officers are made more respectable than they are at present ; for certainly, at present, they have not the means of living comfortably, or according to their rank.

I departed for Irkutsk, and re-crossed the Baikal, where I purchased a couple of silvery seals' skins, or *Phoca Siberica*, which are numerous in the lake, and consequently set aside the axiom of Pliny. I reached Irkutsk safely on the morning of the 7th of February, having been exactly one month absent. Having refreshed myself a little, I commenced preparing for my departure towards Europe, which I hoped to reach by a sledge-road. Society had lost every charm in Irkutsk ; the ladies, the military, and the most respectable merchants, were either gone to the fair of Kiakhta, or to the hot baths. I took possession of my old quarters, and became, as it were, master of the house. Here I had the pleasure of receiving a long and highly complimentary letter from Sir Charles Bagot ; a pleasure indeed far too great to be described.

Upon the evening of the 10th of February, snow fell in great quantities, and I consequently departed the next morning, with tears of regret at quitting a place where I had been so cordially and respectfully entertained. If, on my return, I expe-

rience similar good fortune, I shall indeed have cause to rejoice ; and, if my expenses from hence to Moscow be as small as to this place, I may be termed a most economical traveller ; for, from thence to Irkutsk, a distance of about three thousand five hundred miles, in a direct line, it cost me only thirty-two roubles, or twenty-five shillings ; a sum which also included the purchase of tobacco.

Late in the evening I reached the glass and cloth manufactory belonging to the Emperor, distant forty miles from Irkutsk. The cloth produced from this factory, is of a stout and coarse kind, and of a greyish colour, and is destined to the use of the Siberian army. The glass is, in general, of a greenish colour, but both manufactories are considered to be in a thriving condition. Its commandant depends upon the private cabinet of the Emperor, and is in no respect subservient to the governor-general of Irkutsk. I had crossed the Angara, with its fertile plain, and had viewed the distant hills to the right, with a melancholy to which I had not of late been accustomed ; after which, my route lay over a well-wooded country, with neat and populous villages at every ten and twelve miles, besides numbers, inhabited by Buriats, off the high road, at the distance of two and three miles. The weather was cold, but the road being very fine, we were not long in reaching Nishney Udinsk, which we did on the morning of the 13th of February, in a frost of 32°.

Nishney Udinsk is a large, but scattered, town, situated on the right bank of the Uda, which falls into the Yenissei. The people were mostly drunk, and I was consequently detained for some time. The town-major, who is the progeny of a cockney shoemaker and a butcher's daughter, amused me

greatly, by showing me his affidavits and indentures, bearing the signature of Sir Richard Carr Glyn, the then lord mayor. He is strongly marked with the characteristics of his cockney ancestry. It was at this place that the most unbridled tyranny and extortion were practised about three years since, by the ispravnick, who was seized and conveyed away under a strong guard, by order of Mr Speranski, and still remains in prison. He was so great a simpleton as to keep his riches in his own dwelling, and all were consequently confiscated. Indeed, such were the abuses in this commissariat, that the governor-general was a fortnight employed in hearing grievances. In those times no one, not even an officer or civilian, could pass through the city without a Cossack; for, unless a toll were paid, robbery was certain afterwards to take place, a regular band being employed for that purpose. Nor am I aware, nor have I any reason to believe, that there is much difference betwixt its then and its present state.

From Udinsk I descended a difficult pass, at a tremendous rate. Under any other circumstances, I should certainly have preferred slower travelling, but the wretched disposition of the people reconciled me to the danger. I reached the large village of Illan, and the still larger village of Ingashe, where regularity, cleanliness, and propriety are more conspicuous than in any other place that I have ever seen. Many of these villages contain from one hundred and fifty to two hundred dwellings. No horse, cow, or dog, no cart, or dirt of any kind, is allowed to remain in the street a moment. When a vehicle stops with passengers or travellers, it must remain at the back of the dwell-

ling, and the street being thus clear, the travelling vehicles pass through the village with a wonderful rapidity, without any fear of consequences.

I had now reached the frontier town of the government of Irkutsk, the inhabitants of which amount to six hundred and fifty thousand, including two hundred thousand in the governments of Yakutsk, Okotsk, and Kamtchatka. The number of convicts is estimated at from ten to twelve thousand; many of them are allowed to work for their own benefit, as is the case in most of these villages on the frontier line. The children of these convicts become what may be termed crown peasants, the sins of the fathers being thus truly visited upon the children, unto every succeeding generation.

The government of Irkutsk is most extensive, occupying a breadth, from east to west, of two thousand miles, and a difference of latitude equal to one thousand two hundred, which averages not more than one person to every four square miles. This part of the world is, however, so rapidly improving, that, although it is little more than two years and a half since I passed this road, I can scarcely recognise the same places. Commissariats have become governments, towns have taken the rank of cities, villages are called towns, and where there were no dwellings, there are now many hamlets. This might hastily be attributed to the increase of crime, but this is not the cause; it is owing to the transplanting of people to the vicinity of the new government from the sterile wilds of Ishim, as well as to the arrival of some convicts, or in the same ratio as the aborigines may be said to decrease.

Upon entering the government of Yenisseisk, I directed my route to Kanskoi, situate on the left

bank of the river Kan, the Styx of Siberia. My old friend the schoolmaster had changed his abode, a circumstance which I much regretted. My route thence lay over a fruitful corn and pasture country, with a good deal of fine scenery, until I reached the vicinity of Krasnojarsk, when it became more dreary and sandy. I reached this new capital of a new province at midnight in very cold weather, and was glad to get into comfortable quarters, as well as to escape from the ruffian set of convicts who compose the inhabitants of many of the villages, all of which are in a most disgraceful, mean, and slovenly condition. No spark of emulation is discernible in the character of the people of this province. This, no doubt, arises from want of encouragement on the part of the chiefs and visiting officers ; but indeed the state of the police, and the attention shown at the post-houses in the government of Irkutsk, make the negligence in other governments much more conspicuous.

I have heard of necessary evils, and have doubted such a paradox. I was, however, on this journey convinced of the fact at certain places and at certain times. I had a good and active Cossack with me, whom I was very well pleased with, except on arriving at the villages in the Yenisseisk or Tomsk governments ; as, on such occasions, it was his constant practice to beat and otherwise ill-treat those whose business it was to provide horses, pulling them by the hair, ears, and nose, and this without the least apparent necessity or provocation. On my demanding the reason of this brutal conduct, he told me, that if custom and inclination did not lead him, necessity would compel him, so to act. The practice had the effect of enforcing the demand afterwards made for horses,

which he was then certain of having furnished forthwith. That, but for this severe exercise of authority, there would be no possibility of his getting over more than sixty or eighty miles a-day, while the government, at such a season of the year, expected at least one hundred and eighty or two hundred. Doubting the truth of this extraordinary representation, I desired that, at the next village, he would order horses in a peremptory manner, but not ill-treat or abuse the people concerned ; he did so, tendered the passport, and desired all haste to be made ; the elder of the village replied the horses would arrive immediately. I waited half an hour, and got none. “ Where is the elder of the village ? ” — “ At the gin-shop,” said the Cossack, “ helping to drink out the money which is to be paid for the next station.” The elder of the village then came to me with an apology, and returned to the gin-shop ; nor did I actually get horses for two hours, at the expiration of which time, the Cossack again had recourse to his old and effectual mode of levy. The reader will believe I never again interfered farther than to entreat he would be more lenient ; the consequence was, I had horses always provided in ten minutes.

This custom of flogging the peasants in advance is so generally carried into execution, that they become more hardened and unfeeling than they otherwise would be ; and it is custom which makes them so averse to carry the government requisitions into effect. It must proceed from the weak and ignorant policy of their immediate superiors ; a policy which adds greatly to the natural tyranny of the Cossacks. It was the strict and rigorous discipline kept up by the late governor of Irkutsk, Treskin, that enabled the traveller, and still en-

ables him, to travel through that government speedily and safely, with the exception of the point at Nishney Udinsk. By proper rewards and punishments, these people might be recalled from the state of depravity and insensibility they are now forced into, and be made, like most of the inhabitants of Siberia, a rational people; whereas now, drunkenness, negligence, and recklessness are their characteristics.

That the peasant is thus harshly treated in many parts of the Russian empire, I will not deny; but whatever obedience he may implicitly pay to his national superiors, let it not be supposed that he will tamely submit so to be treated by foreigners; on the contrary, I have seen several instances of insulted pride in the peasant justly revenged. As a very recent instance, I may mention that an English gentleman, a Mr C., travelling upon a commercial speculation about the central, and, consequently, real, Russian provinces, observed the Cossacks, and, in one instance, an officer, beat and otherwise ill-treat the postilions and people employed in preparing the horses. At one of the stations, Mr C. considered he was not promptly attended to, and, *sans cérémonie*, he proceeded also to abuse and beat one of the postilions. What was the consequence? The man quietly proceeded on with his work, and then made a formal complaint to the elder of the village, a person delegated with magisterial authority, who called upon Mr C, for an explanation, first, for what he had struck the man? For inattention.—And pray, who are you? An Englishman.—Of what rank? A merchant.—Oh! oh! says the old gentleman, as he proceeded to fetch the rules and regulations for the preservation of peace and good order in every village, a copy of

which is kept in the post-house, as well as at the starista's. Mr C. had the offended articles pointed out to him, with a demand of two hundred and fifty roubles, ten guineas, penalty, partly to be given to the sufferer, and partly to the poor. Mr C. demanded why the like was not acted up to with others offending? The starista said, that officers so acting could be reported to superior authority, but that the public service did not allow their being detained for private injuries; but, says the starista, if you do not choose to pay the fine, or if you cannot, you may empower me to proceed in a more summary manner, namely, to have you flogged with leather thongs to the number of thirteen lashes. I need not say Mr C. quickly paid the money, and acknowledged his error; whether from fear that the leather thongs are the same as the knout, I know not; but I believe this same Mr C. is still in Russia, settled in a most extensive business, perfectly satisfied with the administration of the laws, which, if acted up to, especially protect the middling and lower parts of the community.

At Krasnojarsk I visited a party of Jews, of whom there are seventy in the city, some of them very rich. I was surprised at their wearing, added to their long beard, a Tartar dress, which consists of a long silk gown, sash, and black bonnet. Their features, customs, and conduct, are otherwise the same with the rest of their nation. The price of provisions is much greater at Krasnojarsk than it was formerly, owing to the formation of the new government. I called on my old friends the commissary and police-master; the wonderful alterations which an increase of rank had made in the latter of these officers, served to show me that

man nature is every where the same. I found the city in its old place, but much improved in new buildings, public and private ; those for the chancery are beautiful in their design, and liberal in their execution. The city is, in general, built of wood, but bricks are coming into more general use. The situation, both in winter and summer, is windy and exposed. On the opposite banks of the rivers Atchin and Yenissei, the country is beautiful and fertile during the spring, summer, and autumn, but not healthy. It was at this place that the Emperor Paul wished to form a Scotch colony ; and if the project were followed up by the present Emperor, it would doubtless succeed, upon the liberal encouragement which he is known to give to foreigners, generally and individually.

Having renewed my passport and got my sledge repaired, I departed with the intention of visiting the ancient town of Yenisseisk, on the right bank of the river of the same name, two hundred miles north of this ; and thence to have cut into the main road at Atchinsk. Such was, however, the state of the roads, that it was utterly impossible. I had much wished to visit the manufactories established in that place, especially those for working up sea-horse and mammoth teeth. A set of chessmen were presented me about three years ago, which go into the compass of one-third of an inch square ; consequently, so small, that it requires good eyes to distinguish the pieces from the pawns. I had also some desire to see Yenisseisk, because it is one of the most antique places in Siberia, the old Russian style of building being still kept up, in which the roofs of the houses project twelve and fifteen feet beyond the walls, and form a complete shelter. There is, besides, another curiosity

there, which is famed all over Siberia. This is a massive silver candelabrum, suspended from the centre of the church ; its weight is one thousand pounds, and its value above five thousand. The advanced state of spring, and the badness of the roads, prevented my visiting it, and I continued on the straight route.

The road to the first station was so bad that we changed horses twice, nor were the following stages much better ; the first entirely without snow, and the others with too much. I reached the Black River with a broken sledge, the road so hilly and full of ruts, that, from the heavy falls we got, I expected to be laid up ; the concussions were dreadful, and I never suffered so much in my life. Sometimes, while going at the rate of ten miles per hour, upon a smooth and level road, the vehicle would be pitched to a distance of six or eight, and over a perpendicular fall of two feet, nearly killing the horses with the shock. In such a state I reached Atchinsk, which, from a large village when I was here before, is now become a small town. Its local situation at the junction of the Atchia and Tongouska is valuable. On reaching the village of Bogatova, the country becomes better cultivated and more picturesque. The heavy rains which it is subject to, do great damage, frequently inundating the country, as far as Kemtchouga. The entry into the government of Tomsk is equally miserable with that of Yenisseisk, nor are the roads any better. To add to the misery of its appearance, I met two gangs of convicts, about three hundred in number, journeying to a long home. Foxes, however, and good sables, with wild goats, abound in the two governments.

At Birricoule, the incivility of the landlady

the house in which I was quartered, called forth the exercise of my powers. She was determined to afford me no assistance or civility, even denying me her habitation, as she expected the captain ispravnick that day. Having arrived the first, and knowing that, by law, I was entitled to the best quarters in the village, I did not feel inclined, particularly on account of my wife, to give up the point, her abode being really comfortable and clean. I therefore persisted ; telling the lady, at the same time, that I only wanted a little milk, which I would pay for. This declaration had such an effect upon the poor woman, that she became as interested to serve, as she had before seemed inclined to annoy me. She told me her expected guest would require something more substantial than milk, besides a twenty-five rouble note, or a skin of that value. The poor woman also confessed that she had paid the same sum not long ago, and was again prepared for the honour done her by this commissary.

My route lay over a level country, boasting numerous villages, but all bear the Tomsk character—marks of much misery. There is a considerable quantity of fine timber about the country, before the city of Tomsk is approached. The prospect then becomes most dreary and desolate, presenting one boundless waste of brushwood, covered with snow. I reached the city late in the evening, quite knocked up from fatigue and want of rest, although my wife still held on. To try my patience, I was kept waiting at the police-office two hours before I was provided with quarters : into the first, however, I could not be received, nor into a second which were pointed out to me ; and

upon my arrival at the third, I found them so bad as to be hardly habitable ; perhaps I was getting too nice and delicate. At any rate, they were so bad as not to induce my staying a longer period than was necessary. I paid my respects to the acting governor, an excellent character, as also to Mrs Illechefsky, wife of the late governor. In Tomsk, as in many other places, the acts of the new governor-general (for Siberia has now two governor-general, the eastern one commanding the governments of Tobolsk and Tomsk, with the chieftainship of Omsk ; and the western one commanding the governments of Irkutsk and Yenisseisk, with the chieftainships of Yakutsk, Okotsk, and Kamtchatka) have created great disgust ; among others, may be mentioned his conduct to the people working the brandy distilleries. The governor-general is General Kaptzevitch of the army, a man who distinguished himself in the late campaigns. His severity and rigid principles are not likely to gain him many friends in Siberia ; as would be divined from his having actually ordered officers to receive so many blows, if the quantity of spirits extracted from corn were not more than doubled. Whether the general was right or wrong in the mode of increasing the revenue, or of making people do their duty, is one question ;—whether the officers and people employed did not make a pecuniary sacrifice to escape such humiliation, is another ; but, certain it is, the quantity of spirits is produced.

It is in agitation to remove the seat of government from Tomsk, to a village not far distant ; for what reason I cannot conjecture, as no seat of government is required to furnish more than the conveniences of keeping up the communication. Tomsk has already lost much of its population

within these ten years ; the district of Kolyma which contains a population of one hundred and fifteen thousand, is now independent of it ; and the new government of Yenisseisk has taken from it about sixty thousand ; so that the patronage and pecuniary concerns of the governor of this province are greatly diminished. The number of inhabitants in the city is, at present, near ten thousand, which will shortly be reduced, as a great number will quit. There are one thousand eight hundred houses and twelve churches in the city, situate at the junction of the rivers Tom and Ousheika, one of the most dreary and bleak situations in the world. A great number of Mahomedan Tartars reside in the city and contiguous villages, who are of the same caste as those of Kazan.

From Tomsk I departed for Tobolsk, that I might see the new governor-general ; and, as the road is one I have never been over, I shall be more particular in tracing and describing it. The first forty miles were over a fine road, the borders of which were lined with noble timber, such as birch and pine. There was some tolerable park-scenery, but the country was generally flat. At the little romantic village of Tasheka I crossed the magnificent river Obe, where it was a mile wide. Thence my route, day and night, was continued over a most uninteresting low flat pasture plain, with here and there a few dirty villages. At one hundred and fifty miles I reached the village of Tchien, where I breakfasted with an old man, who was one of the first settlers upon the Barabinsky steppe, under the auspices of Catherine. He remembered when bread was a halfpenny, and beef five pence, for thirty-six pounds ; whereas they now sell at five pence and thirty pence. Formerly also, the

people worked better, and not being the high-road, they had not so many drawbacks.

The road, as I proceeded, was crowded with caravans loaded with tea, silks, and furs; and I reached the town of Kainsk in good time to breakfast. The road was good, but the country and villages bear the most wretched desert appearance; no wood of any description is to be seen on the left bank of the Obe. I had crossed the Kainka before entering Kainsk, which is a neat town, standing in the centre of a low brushwood forest. There are six hundred houses, and two thousand five hundred people. The three chiefs who command it appear to have placed it in a flourishing state. In the town are several handsome brick edifices, a well-stocked market, and clean streets; but there was not the least bustle or noise, save that of the tolling of a solitary bell for mass.

From Kainsk I directed my steps towards Omsk, having understood that the governor-general, Kaptzevitch, had left Tobolsk for that place. The central part of the Barabinsky steppe presents a good deal of cultivation, which increased as I reached the western parts of it. Horses, goats, sheep, and cows, appeared very abundant. The soil is considered so fine, that it resists the cold in a more than ordinary degree. Bears and wolves abound in the neighbourhood, and approach the villages so close, as often to alarm the people. Hogs, fowls, ducks, and geese, are seen running about the villages, in all of which there are several farm-yards. Considering the northern situation of the Barabinsky steppe, the excessive rigour of its climate, which, forty years ago, was deemed uninhabitable, and the various obstacles which opposed agriculture, it cannot be denied that great praise is

due both to the government and the colonists. At present, probably, there is less danger in traversing it than any other part of the Russian empire; though the inhabitants in general do not possess so much of that kindness for which the Siberians are celebrated, most of them being schismatics from the Greek church, and descendants of those sent thither for colonization by the Empress Catherine. Their villages are now so numerous and well-peopled, that sixty and seventy dwellings are met with at every five or six miles.

Having been hospitably entertained by the commissary of Kainsk, with whom I had previously been acquainted in Tumen, I departed for Omsk, and before I had proceeded ten miles on my journey, the Cossack left me to pass his time in a gin-shop, and I continued on without him; but, by buckling a pair of horses to a slight sledge, he succeeded in overtaking me. Terror was depicted in his countenance, for he was conscious of having rendered himself liable to severe punishment. He turned out a worthless drunkard, but I pardoned, in preference to punishing him. The first half-dozen villages, which are very well built and clean, contain five or six hundred inhabitants each. The road being very fine, we were enabled to reach Voznesensk, ninety miles from Kainsk, in twelve hours. Many people are stationed on the road, and employed as contractors on account of government, to buy up the next year's corn, which begins already to get dear, owing to the demands for the support of the garrison of Omsk and the people of Tobolsk. There were also on the road several persons bound to the new government of Yenisseisk, from the wilds of Ishim. They are principally Poles, and, on account of the govern-

ment offering lands free of taxes for twenty years, are removing to more fertile places.

I turned off from the Barabinsky steppe previous to my reaching Tara, and took the direct route to Omsk; a route which I found it difficult to traverse, being so narrow, that the horses were obliged to go, as it is called in this country, "goose-fashion," one after another. The sledge I had was also too broad for the road, and frequently threatened to upset, though this could do us little injury, the depth of the snow being such, that half-a-dozen horses could not have removed the vehicle from such a situation. The point where the road branches off is also the line of demarcation between the governments of Tobolsk and Tomsk, and is formed by the large and neat village of Yalanka, which contains one thousand five hundred inhabitants. I felt extremely gratified at reaching the government of Tobolsk, which appeared to me, even on the frontier line, to be inhabited by a more civilized and generous race than that of its eastern neighbour. The lands were certainly in a better condition, being stoutly and neatly fenced in, at least along my route, which was on the right bank of the Om. The only picturesque spot, however, on the road to Omsk was at the village of Tavalganka. Here I halted for some time at the abode of an old man, who maintains a couple of Kirguise, if possible, in a more miserable state than my fancy had before painted them; for here they were in a frost of 32° , worse than half-naked, yet in that state compelled to work hard for their bread. I reached Omsk on the third day, and put up at my old quarters.

In addition to what I have before said of the Kirguise and Calmucks, the former may be de-

d as a half Mongolian and half Tartar breed, e the latter are pure Mongoles ; their respect- characters do not so much vary, for, in their less, filth, and abject state, they are indeed as people.

CHAPTER VII.

Omsk—Tou-Kalan—Ishim—Tobolsk—Kamishloff—Mr Major's establishment—Ekatherinebourg—Billimbay-Zavod—Bisserts kaya Krepost—Koungour—Perm—Okhansk—Kilmess-selti—Malmish—Kazan—Tcheboksari—Vassil—Nishney Novgorod—Borgorodskoye—Paulovo—Vladimir—Moscow—Klinn—Tver—Torjock—Vishney Volotchock—Novgorod—St Petersburg.

My first duty was to wait upon his excellency, the governor-general Kaptzevitch, to whom I had the pleasure of being known in Kazan. I was received as usual, and every attention and kindness were renewed to me by my old companions. My passports were also renewed, a public order was given for every legal assistance to be rendered me, and I again prepared to start. Omsk appeared, like most places in Siberia, to have undergone a considerable change ; for the streets are kept clean, the gaps are all filled up with new houses, public buildings have been erected for many of the chief officers, a cloth manufactory has been established, and is already at work, and the lame, blind, deaf, and dumb, are employed in it ; the streets are no longer traversed by the begging poor, and a more military air pervades the town than formerly ; more of real justice is administered along the whole line

of demarcation, and, consequently, more general satisfaction and tranquillity prevail.

I attended an examination of the young Cossacks, three hundred and fifty in number, and, considering their ages, thought them very well advanced in reading, writing, and arithmetic; the senior classes have also made considerable progress in drawing, fortification, algebra, and mathematics; and one, a distinct class, in the art of surveying, with the view of being employed to survey the whole of Siberia. They are well clothed, fed, and lodged, at the expense of the Emperor; as are also the sons of the soldiers of Siberia, of whom there are one thousand in the Lancasterian school, which system is still laudably persevered in, and with complete success. Omsk has of late been erected into a vice-government, and consequently a chancery court, and trade will be established there, independently of Tobolsk.

After two days' stay, I departed from Omsk; previous to which, I encountered some difficulty ere I could be permitted to bid an adieu to the governor-general. It would seem that the swaggerings of jacks in office, such as A. D. C.'s secretaries, pages, and the like, have found their way from civilized Europe to barbarous Asia, as they are termed. I called upon his excellency, and was told by one of these contemptible fellows, that if I made my *congē* to him, it were the same thing. I told him I thought otherwise, when I was given to understand, that he could not inform the governor-general of my being in waiting, unless I told him, the servant, for it is the same thing, what I had to say to his excellency. Still I persevered, and merely remarked, that if I could not *speak*, at least I could *write*—of course I was instantly admitted,

and he reprimanded, instead of being discharged like any other servant. I mention the circumstance as one to prove that Siberia is also, like Europe, advancing backwards in the score of humanity and civility. Quitting this subject, which occupied my thoughts for some time, I soon reached Tou-Kalan, a place which I well remembered, as being that where I lost my passports and papers ; this village has also risen to the rank of a town. Thence my route lay towards Ishim, one hundred miles from Omsk. Upon the road I again had a difference on a point of etiquette with a young officer who was going thither. The road was so narrow, and both our sledges so broad, that it was impossible to pass without one of them being upset into the snow. Presuming on his rank as an officer, he ordered my Cossack and driver to pull up out of the path and let him pass. My Cossack, though told that he was an officer, refused to obey until he knew his rank ; and finding that he was a lieutenant, and consequently *only noble*, desired him to make way for *most noble*. The young gentleman, being pressed for time, and rather headstrong, drove on as near the edge of the road as possible, and his sledge coming in contact with mine, was most completely turned off the road into the snow. His situation was truly laughable, as he was obliged either to unload it, or remain until the melting of the snow would allow his proceeding. I wished him a pleasant journey, and resumed mine.

The road to Ishim was in a bad state, the country very dreary, yet there is some fine wood to be seen. It was now Lent, and I could get little to eat but salt fish. This was a circumstance I had not calculated on, but there was no remedy nearer than Tobolsk. I supped at a regular eating-house,

where money is demanded, being, I think, the third instance of such an occurrence in Siberia. The landlady had that day given her daughter in marriage to a young farmer, and had also benefited her son, by giving him a wife at the same time. It was ten o'clock when I arrived, and though the custom of Siberia is to turn out of the best room and make place for a visitor, yet I was unwilling to allow of this, and supped in the kitchen, which was decidedly the best part of the house ; for the principal room, where the new-married couples, their father and mother, and three younger children, in all nine people, slept, was, from the warmth and horrid smell, scarcely possible to be borne. I asked the old lady how she could think of celebrating nuptials at such a period of the year, it being Lent ; her answer was, I do not recollect.

There is some tolerable park-scenery north of Ishim, which, in my idea, was much improved by the numerous windmills at work. They are the first I have seen in Siberia, and extend along the road from Omsk to Tobolsk. The peasants are here very industrious and economical, but the lands are sterile, and consequently produce but little bread, which is sold at ten pence the forty pounds, while meat, of which there is a great abundance, from the excellency of the pastures, is only thirty pence the forty pounds. The people are, however, so really Russian, that they cannot do without bread, cost what it will. Many of them are, in consequence, removing to the new government of Yenisseisk. I passed through several Tartar villages, willingly partaking of their homely fare, though more for the comfort of a blazing fire, which is always burning on their hearths. I treated the wives with tea, who, however, respect the presence,

not only of their husbands, but of any other male, too much, to partake of it without their previous consent. These Tartars are a most obliging and hospitable race, who cheerfully obey the commands of the government, and hardly ever go beyond the village which borders on their own. They are become excellent agriculturists, and the women employ themselves in weaving a strong sort of carpeting, which they convert to counterpanes, blankets, and bed-carpets. Their dwellings are clean and neat, not unlike a common guard-room; they have no chairs or stools, and live principally upon horse flesh, and are all Mohamedans of the Kazan tribe. Upon reaching the environs of Tobolsk, with hard work and worse roads, we lost a horse which, by law, I was obliged to pay for, as it was the shaft horse; the sum was twenty five roubles or one guinea. As I neared the city, I observed my Cossack constantly drunk, and it turned out that he had sold all my copper cooking utensils, the loss of which I had not discovered in time, we could get nothing upon the road to cook. Three more gangs of convicts were passed before I entered Tobolsk, which was late in the evening, when I was instantly provided with as good quarters as I could desire. The cold was so intense, that my Cossack, who had fallen asleep from liquor, was severely frost-bitten.

Tobolsk has undergone little or no change since I left it, unless it be in its governor; and a great change has taken place within one year, in the government and province, except Okotsk. I spent three pleasant days with my friend Mr Grom, the same who travelled across the Irtish. I also renewed acquaintances with old friends, and, except that the society is less pleasant

more reserved, I observed little difference. The present governor and governor-general are unmarried men, consequently have little inducement to have females at their houses. A certain air of pride and severity also prevents so good an understanding as ought to subsist, and which, under the auspices of the late governor, did subsist, in this city.

Tobolsk is a more regular and compact built place than Irkutsk ; it contains one thousand eight hundred and seventy houses, eight thousand males, and ten thousand females, besides the military and Cossacks, and is consequently larger than Irkutsk. It boasted also the presence of a very young and pretty Englishwoman, in the person of a Miss Norman, who is going to educate the children of the governor of Krasnojarsk ; her accomplishments and amiableness duly fit her for the task, but her beauty will much expose her where she is going ; so that she must shortly either marry well, or return to her family——.

I quitted the city of Tobolsk escorted by a dozen friends, who, with bottles of champagne, accompanied me a few miles, when I parted with them, and, following the great road, reached Tumen the next day, one hundred and seventy miles. It is a flourishing and well-built town on the Toura, and carries on considerable trade by water. I quitted it for the last station in the government of Tobolsk, and, with a grateful heart, bade adieu to Siberia, which commences at Tumen : Ekatherinebourg is dependent upon the government of Perm, although actually in Siberia, if the Ural Mountains divide Europe from Asia.

The road thence was crowded with vehicles of all descriptions, and there was an air of cheerful-

ness on the countenances of the peasants, which I had not seen for some time ; they were busy in getting in hay and straw. The villages are also better peopled, and occur at every three and four miles ; indeed every thing tells me I am leaving the wide-spread and desolate regions of northern Tartary, for the populous, civilized, and industrious ones of northern Europe. Yet I did not feel elated at leaving a place where I had been happier than in any other part of the world. Travelling all night, I reached Kamishloff, a considerable town, containing four hundred houses and fifteen hundred people. There are many new brick buildings, and much improvement has taken place, in consequence of the active exertions of the town-major, who had formerly treated me kindly. To Ekatherinebourg are eighty miles, the last twenty of which are barely passable, from the dreadful state of the roads. Never was I more truly thankful that I was able to exercise my pedestrian powers, than on the present occasion ; but what to do with my wife was a difficult and serious question. She was, however, compelled to walk, to avoid greater suffering. The roads are full of cross ruts four and five feet deep, and the fall of the vehicle in them was such, as made it impossible to remain in it ; and from the concussions I received, I felt seriously alarmed, not only at my own state, but for that of my better half. It is the approaching fair of Irbit that renders the road so bad, owing to the many thousands of heavy laden vehicles passing to and fro, and which, occasionally halting, sink into the snow, and thus make the road full of ruts. By dint of labor and patience, we reached fourteen miles in twelve hours, halting at the hospitable abode of Mr May which we reached at midnight. A good sup

and hearty welcome were in attendance, and I then got what I more wanted, a sound sleep.

I staid two days with this gentleman, who is an Englishman, brought up in the Birmingham trade ; and who, had he possessed the least economy, must have saved a large fortune, as the numerous good employments he has held under the crown, as well as under the most wealthy individuals, sufficiently prove. He has an excellent heart, with a speculative and inventive genius. At present he is engaged in the direction of the salt-works of the Countess Strogonoff. New steam-engines are to be erected by him, and he is to receive thirty thousand roubles per annum, besides a per centage upon the saving effected by the adoption of steam ; he is also employed in completing a machine, which he has invented for the more easy and better washing of the gold sands, and which his estate is said to abound with. He showed me, however, as a sample, all the gold he had collected, and which is certainly not worth seven shillings. His estate is sandy, yet produces some extremely fine pastures and large woods ; it is of several square miles, and was given him in perpetuity by the Emperor. Mr Major has also received from the same monarch, diamond rings, orders, crosses, and pensions, too numerous to mention. The employment of steam in the working of the mines near Ekatherinebourg, is owing to the ingenuity of Mr Major, who has also established on his own premises a manufactory of knives, forks, scissors, and cutlery of all descriptions. Should he succeed in getting a Siberian market, and should he be able to produce articles of worth, which, however, I much question, he will no doubt realize a large fortune in his old age. I have brought a four-bladed pen-knife to England,

which is sold at nine-pence, or seven shillings and sixpence the dozen. It lasted well to mend one pen, and since then must be ground or set, to enable it to cut a second. I might have said to Mr Major and others—

So many irons in the fire you hold,
That none of them, methinks, will turn to gold.

I left his amiable and hospitable family, and proceeded on to the city of Ekatherinebourg, which I reached in the morning. I waited upon the new chief, who has been here two years ; he is well spoken of, as having the good of the service much at heart, although his manners are eccentric, and he is no friend to society. He was several times in England, and is, no doubt, a man of talents. He has increased the quantity of gold, produced from the washing of sand, from six hundred to two thousand pounds weight, which is equal to an increase of the revenue of Ekatherinebourg of near one million and a half of roubles. There have lately been some valuable gold mines discovered on the eastern and western ranges of the Ural Mountains ; the richest specimens are found on the east, and those in the lands of a Mr Yakovleff are the best ; and that gentleman, whose liberal and magnificent establishments I have before noticed, has entered into a contract to supply the mint with two thousand pounds weight of gold per annum, at a certain price, for a certain number of years. This is indeed a serious undertaking, but I doubt not it will be made good. Government are also about to commence working some newly discovered gold mines ; and, it is said, a fresh assistance of six thousand workmen is to be sent from the college of mines at St Petersburg ; in-

deed, such are the inexhaustible riches of their mountains, that hundreds of thousands of people could be employed, and yet centuries would elapse ere they procured any great proportion of the hidden treasures, which are daily becoming more apparent, and which may ultimately vie with the mines of South America in the precious metals, and surpass them in the variety and beauty of their mineralogical productions.

Ekatherinebourg has considerably improved, but society has much fallen off, nothing but the low plodding Germans being left. It is, however, a flourishing and improving place, and will doubtless, ere long, be a most important one. I again visited the establishment of Mr Yakovleff, and found the building increased by a handsome church, a large and well-regulated hospital, besides a school where the director's children, as well as those of all the peasants, are brought up. Priests, doctors, and schoolmasters, are severally provided for at the expense of the owner, and I have never seen a place where philanthropy and good sense were more predominant, and where more general satisfaction beamed on the countenances of people termed slaves, than among the peasants of Mr Yakovleff. Who will, after this, affirm that Siberia is only the abode of vice, misery, and ignorance?

I quitted Ekatherinebourg at midnight, and reached, early in the morning, Billimbay Zavod, near forty miles ; the country was hilly. At break of day, I was on the highest peak of the Ural mountain pass, and could not help stopping to take a last view of Asia, the forced residence of many dear and valued friends, as also the abode of others whom I much esteem. Though it is, generally speaking, *the land of the exile*, it is rather the land

of the unfortunate than of the criminal. It is the want of education, which, begetting a looseness of morals, plunges these unfortunates into error. The thinness of population in Siberia, is a ready reason to account for the facility with which a person is exiled. Of real criminals there are not so many as is imagined, as, by the report of Nertchinsk, it appears that but two thousand five hundred criminals are employed in the mines. It is not every man who is sent to Botany Bay that ought to be termed a criminal; nor every one who is exiled to Siberia. It may be safely said, that all the most hardened criminals who are banished for life are at Nertchinsk and Okotsk; at least there are very few exceptions, and I believe their whole number does not exceed three thousand, while the number of exiles sent for a limited period annually amounts to at least one half that number. As to the education and moral habits of the natives of Siberia, they are certainly equal, if not superior, in these respects, to the European Russians. They have not the same incitement, nor the same means of committing crimes. The whole population does not exceed two millions and a half, about one half of which are aborigines, scattered over a tract of country which gives to each person three square miles. Provisions and clothing are cheap, taxes are not known, the climate is healthy—and what can man more desire? I looked again to the east, and bade adieu, thankful for the many marks of esteem and kindness I had received from the hands of its hospitable people.

Descending the western branch of the Ural Mountains, I soon found myself again in Europe: the land of malt, the fire-side home, again had charms for the traveller. The sensations I ex-

rienced upon quitting the most favoured quarter of the globe, were nothing when compared to the present. Then I thought I was going only to the abode of misery, vice, and cruelty, while now I knew I had come from that of humanity, hospitality, and kindness. I looked back to the hills, which are, as it were, the barrier between virtue and vice, but felt, in spite of it, a desire to return and end my days. And so strong is still that desire, that I should not hesitate to bid adieu to politics, war, and other refined pursuits, to enjoy in central Siberia those comforts which may be had without fear of foreign or domestic disturbance.

In the evening of my entry into Europe, I reached the village of Bissertskaya Krepost, situate on the Bissert stream. The road was bad, and over a hilly country; nor was my dissatisfaction at all allayed by the conduct of the Permians. Inhospitability, incivility, and general distrust, everywhere prevailed, and influenced the conduct of the inhabitants: even the last copek is insisted upon in payment for the horses, before they are permitted to commence the journey; a circumstance which, in many cases, occasions much inconvenience and loss of time. In Siberia the traveller may pay forward or backward three or four stations, and every sort of accommodation is given.

Immediately upon leaving Siberia, I had a most severe attack of rheumatism, or pains arising from the joltings I had formerly got; probably, also, the change of air did not agree with me, until I had again become accustomed to it. I, however, persevered in the journey, and, passing a gang of gipsies with their usual eccentricities, and a larger gang of convicts, I reached Koungour. The villages upon the road are numerous and well-peopled.

Many iron and salt-works, as well as distilleries, are to be seen in all directions, and an active and industrious spirit everywhere prevails. Noble timber, too, is in great abundance, enlivening the prospect, among which the lofty oak is the most conspicuous. At Koungour a sort of hotel and billiard-rooms have been established in my absence, and appeared to be doing well.

The picturesque situation of Koungour cannot fail to please, commanding a fine view of the surrounding well-cultivated, and better wooded and watered, country. There are one thousand one hundred dwellings, and four thousand two hundred inhabitants in it; half-a-dozen churches and some stone edifices, give it a respectable appearance, yet as to thrift it is but a sorry place, although the honey it produces is considered as very superior and abundant. Formerly it was the capital of a province, and, previous to that period, a favourite place of the Tartars. The caves where they resided are still shown in the light of useful curiosities, inasmuch as they are converted into ice-cellars and store-houses.

From Koungour to Perm are sixty miles, of at present most execrable, but during the summer, of the most beautiful road. I reached the city at midnight, exceedingly worn out. The police, mistaking me for a horse, gave me a stable for a lodging. I was, however, satisfied with any place in my weak state, and with violent rheumatic pains. Perm, with two thousand houses and nine thousand inhabitants, is going on in an improving and handsome style of building. It is in short a flourishing place, and will in time become of great importance, and one of the most valuable governments in European Russia. It stands on the right

bank of the Kama, in a fertile and well-wooded country.

I procured from the governor a fresh passport, and was almost *obliged* to listen to his absurd and ill-timed questions regarding my wife—questions which evidently showed his utter ignorance of his own country. Perhaps he suspected my wife was a Tartar, a Mongole, or some other sort of Pagan. He asked me of what country she was. I said, “Of Kamtchatka.” “Is she a Kamtchatdale?” “As much as you are a Russian.” “Who and what is her father?” “He serves.” “What is his rank?” “A priest.” (A laugh, for he really does serve the church.) “But is he a Russian or Kamtchatdale priest?” “As it may please the natives of either country to attend the service.” “Does he speak the Russian language?” “He does.” “But is he a Russian or Kamtchatdale?” “Both.” “How can that be?” “In the same manner that you are a Livonian and a Russian.” “Is he a *white man*?” “In appearance, but cannot answer for any few shades by which he may be removed from a Tartar or other tribe.” “In what language does he read the divine service?” “In the Russian.” “Oh, then he is of the Greek Church, and a Russian?” “Of course.” “And your wife, where was she brought up?” “In Kamtchatka.” “What has been her education?” “*To respect every body.*” “Well, I will give you joy,” said this governor, “but, I confess, I would rather you go to Kamtchatka for a wife than I.” I told his excellency that “I thought it better to have such a wife as mine, who would go where I chose, and would consider it her greatest delight to do so, than such as his, who would neither accompany nor remain with him, although in her

[illegible][illegible]

for the night, to relieve him ; but such is the etiquette, that the post-master would not give extra horses, either for love or money—so much for the government of Perm, and which I here quitted for that of Kazan, over desperate roads, with a more desperate increase of rheumatic pains. Yet I was content to persist in moving forward, in consequence of the attention of all classes of people to my wants. In the early part of the evening, I reached the village of Kilmess-selti, in the government of Viatka, having come through a well-peopled and well-cultivated country. At noon on the following day I reached Malmish, one hundred miles. The road was better, the villages more numerous, and all having a principal residence belonging to the lords of the lands, which I considered the first good visible sign of my having reached European Russia.

Malmish is a small neat town, with a growling post-master, in spite of whom, ill as I was, I continued my route, and reached Kazan the next morning at seven o'clock. The last two stages I was obliged to go upon an open sledge, as I could no longer endure the heavy falls of my own ; and so ill was I, that I considered the palpitation of my heart as a short prelude to dissolution. It was fortunate my journey by the winter road was to end at Kazan. I could not have gone farther, and should therefore have been compelled to have staid two or three months in a village, unprovided with necessities, much less with comforts. It was not, however, upon my immediate arrival at Kazan that my difficulties were to cease ; I was kept at the police-office for two hours, awaiting the arrival of the police-master. As he had not at that time arrived, the officer in waiting was kind enough to

order me to comfortable quarters, which, when I reached, I was not allowed to enter, as the police-master sent a Cossack to say he had better quarters for me in a more convenient part of the city. I returned to the police-office, and was then directed to quarters already occupied. I again returned to the police-office, and was ultimately, as in Perm, sent to a stable. Even that was a happy situation for me in the state in which I was. I managed to call upon a governor, whose functions had ceased, and represented the case, which he, from prudence upon his own account, could not interfere in; although he is a worthy man, and had shown me many marks of attention upon my outward journey.

I dined with this governor the next day, and, at his house, met Mr Yeremeoff, whose wife was the governor's niece, and had become both wife and mother in my absence. I drank tea with her, when Mrs Cochrane was taken so alarmingly ill, that she could not be removed. Mr and Mrs Yeremeoff kindly and good-heartedly insisted upon our removal from the stable to their elegant mansion, the resort of the first society of Kazan; the owner being a pattern of liberality and honest sentiment, his lady a woman as accomplished and elegant in her manners, as she is virtuous and humane in her heart. For twenty-three days was my wife confined to her room, and for more than that time I suffered a species of torturing pain in the heart and left side, which only left me from lapse of time. The names of Paul and Liuboff Yeremeoff will ever be engraven on both our hearts.

It was the inattention and disrespect of the police of Kazan, now dependent only upon their own whims, and that of the governor-general, which

procured me such a comfortable residence. The police, at the best periods, was very bad, owing to the difference which generally subsists between the lords, or landholders, and the governors. Thus Kazan is considered as one of the most difficult places to manage in the Russian empire; from what other cause I know not. The nobles still retain their ancient Asiatic pride, in spite of their poverty; nor did they appear to me to have profited so much in general knowledge as might have been expected, considering there is a university. I was certainly quartered in the house of the most liberal and enlightened of them, descended from an ancient Russian family, who had previously served in the army, had travelled, and understood several languages. I called also upon the officiating governor-general, a senator of Moscow, and a director of the College of Mines, sent here to redress and reform, and make much ado about nothing. I saw him but once, a plodding tradesman. His private character, much less his public, I know no more of, than that he did his best to render valid Addison's remark, that man and dog are the only two animals which have not changed natures, *they being equally inveterate towards their fellow-creatures in distress*. To say the least of his excellency, I think him the worst, probably the most eccentric, sample of a Russian that I have seen; neither ambition, nor personal behaviour, nor general knowledge, marking his character; probably his excellency's *scientific* studies disqualify him from the exercise of the more amiable qualities; be this as it may, *he* is not the first instance I have met of a scientific man forgetting the gentleman and man of feeling.

Thus arrived at Kazan, it was necessary to re-

main until the Volga should become passable. The ice had broken up, and was rushing, with a tremendous roar, towards the Caspian Sea. All around the city was, as it may be termed, an universal deluge ; the southern hills and the city alone appearing above water. Boats might be seen passing to and from different parts of the town : while, with others, no communication whatever could be held, from the depth of the mud in the streets, or the velocity of the two canals which run through it. The country around is picturesque at this season of the year, May 1st (1Sth). The southern hills, in particular, have a fine effect. The Volga has now assumed a most gigantic size, and appeared to threaten a general inundation.

The insalubrity of Kazan has been already noticed ; it has been, not inaptly, compared to an Italian city, healthy only in wet and dirty, and unhealthy in hot and dry weather ; but Kazan is also unhealthy during the severe frosts. My time was variously occupied, as I enjoyed the friendship and society of the best classes of the inhabitants, and never felt more at home. I was under many obligations to the vice-governor, nay, to most of the inhabitants of this interesting spot ; but I received not the smallest mark of condescension from the governor-general, or rather senator, whose name is Soimonoff, and who has since been employed in surveying and examining the newly discovered gold mines at Ekatherinebourg, in company with my learned and highly valued friend, Doctor and Professor Fuchs. The latter is, I believe, about to publish a history of Kazan, a task for which his long residence and knowledge of the Tartar language especially qualify him. Many pieces of his have already found their way into the literary

zettes of St Petersburg; among others, the description of the four annual feasts of the Tartars of Kazan, and a delineation of their manners, customs, origin, &c. These four feasts are divided between national and ecclesiastical. The first national is called *saban*, the plough, and is held in the spring; consisting of horse-racing, boxing, and wrestling. The other national feast is called *gin*, and is consecrated to the period when lovers are first shown to each other. The first ecclesiastical feast is called *ramasah*, while the other is called *kurban*,—the amusements of the latter three are the same as the first. The professor has also given to the world many useful hints upon the coins and medals of Kazan, of which he himself possesses a valuable and rare collection, besides some Tartar manuscripts. His situation, as one of the professors of the university, gives him a great advantage, and it is to be hoped he will do much to solve the doubtful and intricate history of the towns of Kazan and Bulgari.

The following concise matter is translated from a short history which that learned gentleman published in Kazan last year, and, as it throws some light upon the subject, I readily give it as I received it.

“The Mordva and Tcheremiesie lived, in ancient times, in the deserts, situated near the central parts of the river Volga, whence, dispersing themselves along the rivers Oka and Kama, which fall into the Volga, they soon rendered themselves, by their inroads, formidable to the Slavonians and Polovzians. Murom, in the time of Rurick, or in the ninth century, served as a fortress to check their inroads. History has, however, preserved so very little information respecting the wars carried on by

these nations against the Sclavonians, prior to the year 1088, that I shall pass over the intermediate two centuries.

“ At that period, the Tcheremiesie and Mordva, known at that time by the common appellation of Bulgarians, seized and retained possession of the fortress of Murom ; and, in 1183, they committed further depredations in its vicinity, as likewise in the territory of Kazan ; and, in 1218, Joustong was conquered. These were the first inroads, and which the Grand Dukes of Russia were unable to repulse until the year 1219, when the Grand Duke Gregory Vcevolodovich marched with an army, and compelled the intimidated Bulgarians to sue for peace, which was accordingly granted under certain stipulations. The peace did not last long, for, in 1218, the same grand duke was engaged in a war with the Mordva, and, in 1232, he was again successful in an expedition he undertook against them.

“ The Russian chronicles mention several ancient cities built by the Tcheremiesie and Mordva ; thus Brachimoff (which should not be confounded with a city of the same name belonging to the Bulgarians) was already a large and celebrated city in 1164, and stood near the upper part of the Kama, but was demolished so early as 1220. The next city of importance was Tuchtchin, which, according to Nestor’s account, was situate on the left bank of the Volga ; the other considerable places named in the Russian history were, Tchelmat, Sabakoul, Ashlie, Djourkotin, and Kerminchouk, all of which were in existence in 1396 ; while the city of Bulgaria is, for the first time, to be read of in 1367, and no farther notice of it is taken after 1396, or it reigned but twenty-nine years.

“ The Bulgarians, like the Mordva, became subject to the Mongolian conquerors, the latter so early as 1239 ; and it would seem that henceforth uninterrupted tranquillity reigned for 120 years, caused probably by the protection which was afforded to the weak by the khans of the Golden Horde ; at least no mention is made of a war until the year 1363, when the Great Horde had become so weakened by internal dissensions, as to hold out prospects of success to the piratical excursions of the Novgorodians, who made their appearance upon the banks of the Volga and Kama about that time, and, in short, continued to commit every devastation and ravage possible upon the Bulgarian cities. In 1380, Touktamish reunited the hordes, and recovered the lost possessions.

“ In 1390, the captures of Viatka and Djouktan followed ; although, in succession, as also with that of Kazan, they fell into the hands of the pirates of Novgorod. It is this Touktamish, khan of the Golden Hordes, who first brings us acquainted with Kazan ; nor are there any prior legends or traditions from which any conclusions can be drawn respecting it. A few tomb-stones, dispersed here and there in Upper Kazan, bear a most ancient date ; but it is a very remarkable circumstance in the history of this part of the world, that of the many monuments found, none of them mention any thing concerning Kazan. The Tartar manuscripts touching the history of these parts, were either consumed at the capture or burning of Kazan, or, which is also not improbable, they were carried away by those Tartars of distinction who fled to Bucharria. The modern Tartars have a few traditions as to the building of Kazan, as also of the ancient neighbouring nations by which it was

surrounded. But these traditions are equally absurd with the details given on the subject in the compositions of Leezloff and Richcoff.

“ The first mention of Kazan in the Russian annals was in 1395, on the following occasion:—Touktamish, khan of the Golden Hordes of Tartary, gave Nishney Novgorod, formerly the property of Simeon Demetrius, Prince of Souzdal, to the Grand Duke Demetrius. The former prince attempted to recover it, and indeed succeeded, through the aid of Tatiaka, or Entiak, Tzar of Kazan, which last was, however, ultimately pursued by the forces of Muscovy, which captured the cities Bulgari, Djouktan, and also Kazan.

“ In the year 1430, Uluck Mahomed, or Mahomed the Great, made his appearance ; he was also Khan of the Golden Hordes, but about the period of their decline. For a long time he remained inactive in the vicinity of Biabeff, but, in 1444, he obtained possession of Nishney Novgorod ; in 1445, he made an unsuccessful attempt upon Murom, being repulsed by the Grand Duke Vasillevitch. In the autumn of 1445, the two sons of Mahomed plundered the neighbourhood of Souzdal, and entirely defeated the forces of the Grand Duke, who was taken prisoner, but liberated in October of the same year, upon the promise of a ransom ; which he was unable to pay, in consequence of falling into the hands of his kinsman, who deprived him of his dukedom.

“ After these successes, Uluck Mahomed marched towards Kazan, *i. e.* in 1446, which, having freed itself from the yoke of the Golden Horde, was now governed by its own princes ; the city was captured, and Ali-bey (Le-bey), its prince, was killed. Mametak, son of Uluck, was placed

upon the throne, and with him commenced the new dynasty. Nikon says, in his Russian Annals, ‘and from that time commenced the kingdom of Kazan.’

“Kazan, from its conquest by Uluck Mahomed, was governed by the following khans:—

“1st, MAMETAK, his son, from the year 1446. The time of his death is uncertain; and his brother Jagoob resided as an emigrant in Russia. The Tcheremiesie, in conjunction with the Tartars, made frequent incursions upon their enemies, particularly into Jousting, which place they plundered.

“2d, KALIL, son of Mametak, whose reign was short.

“3d, ABRAHAM, brother to Kalil, reigned from 1467 to 1478. Under his sovereignty, the Kazaners attacked Jousting, and prevented the Russian forces, which were advancing towards Kazan, from crossing the Volga. In January, 1461, the Tcheremiesie suffered severely in a battle with the Russians; while another force, assisted by the Viatkians, in June 1468, never reached its destination; the Viatkian force having been defeated by that of Kazan, while the Tcheremiesians were similarly treated by the Russians on the banks of the Kama. Notwithstanding these defeats, a powerful Russian army was obliged to retreat from before Kazan in 1469, whither they had proceeded in boats. In the same year, the Grand Duke Gregory, brother to John Vassilovitch, appeared with a powerful force before Kazan, and at once burnt the suburbs of the city. The Khan Abraham was in a desperate situation, and promised to submit. In September, 1478, he, however, being assured that the Grand Duke had been defeated near Novgorod,

immediately advanced upon Viatka and Jousting for the purpose of plunder ; but, from the appearance of a Russian force before Kazan in the month of May, he was again obliged to submit : indeed the want of faith on the part of the Tartars could only be equalled by the tardiness of the Russians in punishing them. Hence, in after times, may be traced the many useless wars between these nations.

4th, ALI, the son of Abraham, 1478 to 1487, had no sooner ascended the throne, than his brother Machmadamen fled to the Grand Duke of Russia, and instigated that prince to march against Kazan ; there he proceeded, in the month of May of the same year, and reduced it on the 9th of July, making prisoner Ali. The Grand Duke raised Machmadamen to the throne of his brother.

“ 5th, MACHMADAMEN, 1487 to 1496. In this reign, the Kazanners were first termed vassals of the Russian Grand Dukes, and were consequently bound to furnish a considerable proportion of auxiliary troops. In like manner, also, Machmadamen obtained succour, when, in the winter of 1496, Mamouk, Khan of Siberia, waged war against him. Mamouk retreated upon the advance of the Russian allies, which latter people also returned home, without even leaving a garrison of protection to the Kazanners. Mamouk, being in league with many of the inhabitants, again presented himself before the gates of the city, and compelled Machmadamen to abandon and forsake it. The new possessor soon rendered himself disagreeable to his tributaries, by depriving them of their property, an act which was as instantly retaliated with success ; for the moment he quitted the city, the gates were shut, and he was not readmitted, but returned to Siberia ; while the Grand Duke placed up-

on the throne the brother of Machmadamen, who brought a considerable suite of Russians : his name was—

“ 6th ABDALLA, 1497 to 1502. He was aided by the Russians, in 1499, against Argalask, brother to Mamouk, who had laid siege to Kazan a second time, and, although the place was successfully defended, still the conduct of Abdalla met with the disapprobation of the Grand Duke, who caused him to be seized and conveyed to Moscow in chains.

“ In his place, Machmadamen, 7th, again ascended the throne, and continued there from 1502 to 1518. In 1505, he revolted, ordered the detention of all the Russians in Kazan, to the number of fifteen thousand, not even excepting the ambassadors, and deprived them of all their property. In September of the same year, he marched against Nishney Novgorod, but without success. In 1506, the Russians advanced against Kazan. The Tartars, conscious of their strength, abandoned the camp, which immediately came into the possession of the Russians, who, not suspecting the Tartars were still in ambush, were taken by surprise, and forced to retreat with considerable loss, as well as the sacrifice of a considerable part of their artillery. Not long after this, Machmadamen altered his conduct ; his mother, being the wife of the Khan of the Crimea, and in alliance with Vassili Ivanovitch, was the means of renewing the former amicable connexions with Russia ; the captives were liberated, and allegiance was sworn to. A protracted illness carried him off at the same time that it did his brother Abdalla. To succeed him, the Kazanners, at their own desire, received, from the Grand Duke, SHAKALY as their Khan ; he

was the descendant of the Khan of Astrakan, and arrived in April, 1519. He was very deformed in person, and Kerberstein has compared him to an English bull-dog. This Khan was therefore not likely to please the Kazanners; indeed, he refused to lead them out to pillage, and punctually obeyed the will of his protector the Grand Duke. In the spring of 1521, he was expelled from the city, and Safageray was chosen in his stead; he was the son of the Crimean Khan.

“ 9th, SAFAGERAY, 1521 to 1530. In his reign, the Russian ambassador, as well as the merchants, were not only detained, but put to death. Shakaly fled to the Grand Duke with his complaint, which, however, was not attended to, from the critical state he was himself in. In September, 1521, Shakaly privately quitted Moscow, then besieged by the Khan of the Crimea. In August, 1523, an expedition was undertaken against the Kazanners, but was productive of no evil consequences, except the building of Vassiligorod on the river Soura. In July, 1524, an army of one hundred and eighty thousand men, marched, under Shakaly, against Kazan; this expedition, also, proved unsuccessful; large quantities of succours were lost, owing to the great difficulties opposed to their conveyance; the military arrangements were badly planned; nor did the commanders wish, nor were they possessed of sufficient courage, to commence an attack. Safageray, in the mean time, encompassed them with his cavalry. On the 15th August, the Russians advanced to the walls of Kazan, and again as quickly retired, contenting themselves with the promises of submission made by the Kazanners.

“ Embassies were fitted out on either side; still, however, the same faithless conduct was pursued;

and, in 1530, another Russian force was marched against Kazan, which produced a battle between the Khans of Nagaesk and Astrakan, and ultimately led to the siege of the city. Again did the Khan acknowledge the supremacy of the Russians, and again were ambassadors appointed, by whose assistance the Kazanners were induced to dethrone Safageray, in whose stead, the Russians placed Enalay, brother to Shakaly.

“ ENALAY, from 1531 to 1535. For some time Kazan went on tranquilly, Enalay and his subjects continuing faithful to the Grand Duke, until the Khan complained of the change in the government of Kazan, when he was confined in the Bielo Ozero. SAFAGERAY retired to the Crimea, where he became Khan; and when the Kazanners had assassinated Enalay, they readmitted Safageray, in consideration of his having again been driven from the throne of the Crimea; indeed there is hardly an instance upon record of the powers of a sovereign being granted, withdrawn, and regranted in such a variety of ways, as were endured by this Safageray, who, in 1525, reascended, and continued till 1546. Reckoning upon the protection of the Khan of the Crimea, he plundered the neighbourhood of Kazan; and, though the Khan of the Crimea constantly strove, by his interference, to produce an amicable arrangement between the Russians and Safageray, yet never would the latter think of submitting himself as tributary to the Grand Duke: he was therefore again expelled, after conferring the whole of his favours on the Crimeans. SHAKALY had, in the mean time, continued in great favour with the Grand Duke, and to him the Kazanners submitted, and promised obedience; which, however, lasted but one month, when he was ex-

pelled, and again replaced by the fickle and fortunate SAFAGERAY, from 1546 to 1549, during which period he was not very popular, although several of the Tartar nobles submitted to Russia, as did likewise those Tcheremiesie inhabiting the right bank of the Volga. February and March, 1548, produced a short war, during which a battle was fought between the Kazanners and the Russian troops under the Tzar John Vassilovitch, unproductive of any consequence but the mutual separation of the combatants. In March, 1549, Safageray died at Kazan, and was succeeded by his son, the

14th Khan, named OUTAMISH, 1549 to 1551; who, not being more than two years of age, was placed under the care of guardians, who in vain sued for peace with the Tzar John Vassilovitch. Kazan was besieged until the approach of warm weather. In May, 1551, the foundation of the city of Sviashk was laid, and thence may be dated the determination on the part of the Russians to destroy the power of the Khans. A considerable force was left in the newly-founded city, as also in all the immediate environs of Kazan. The Tartars, thus pressed upon all sides, with constant losses in numerous skirmishes, hoped to extricate themselves by accepting Shakaly as their Khan. The infant Outamish and his mother were accordingly sent to Sviashk in August, 1551.

“ 15th, SHAKALY soon arrived in the city, with several Russian boyars, and five hundred archers. But Russians and Tartars soon became dissatisfied with Shakaly, more especially for his having put to death, in his own palace, seventy of the principal inhabitants. The Russians insisted on his returning a considerable booty which the Kazanners

had obtained on different occasions ; nor would the Russians restore to him the right bank of the Volga. Thus pressed by Tartars and Russians, the humbled Khan, to save assassination, left the city with his five hundred archers, in the month of March, 1552. He was succeeded by

“ 16th. EDEGAR. To free themselves from Shakaly, the Kazanners had promised to admit a Russian governor ; they now not only refused compliance, but put to death all the Russians residing in the town. They also, endeavoured to foment an insurrection with the people residing in the vicinity of Sviashk, and chose for their Khan this Edgar, son to the Khan Kasay Achmadava, of Astrakan. The Grand Duke was not long before he marched a powerful force, and immediately besieged Kazan. The plan was skilful ; opposite to each entry of the town, batteries were erected, and the cannonade commenced.

“ On the 30th of August, 1552, Nimchin Razmisl (a German engineer) successfully prepared some mines, and, as the city had rejected all the proposals of the Tzar, the mine was fired, and the walls of the city blown up, on the morn of the 2d of October. The Russians immediately stormed the breach, and, notwithstanding the stout resistance of the Tartars, they became victorious. The Khan was taken prisoner, but pardoned upon condition of embracing Christianity ; he was baptized, and assumed the name of SIMEON.

“ Thus from 1446 to 1552, a period of one hundred and six years, there were seventeen Khans of Kazan ; two of them had been three times elevated, and as often again ejected. Such a series of petty and indecisive warfare, hardly appears in history.

After the final conquest of it by the Russians, the people became accustomed to the new government; but those who lived more distant, were constantly fomenting insurrections. Russian forces were continually sent to quell them, as also to collect the tribute which had been imposed, and which was collected in so arbitrary and unjust a manner, that the Kazanners lost all patience, and broke out into open rebellion in 1553; nor were the Russians, who now governed Kazan, capable of quelling it.

“ The rebels assembled from all parts of the Volga, as well as from Arskoy, on the river Mesh; intrenching themselves, they continued to disturb the whole territory of Kazan, until February 1554, when a large Russian army defeated them, killed many, and made fifteen thousand of the Tartars prisoners. Those who escaped retired into the woods of Viatsk, and thence sent to request a truce, which was granted them. Fresh disturbances broke out in 1555, and continued till 1557; during which period, a succession of injury and oppression was heaped upon the Tartars, and as obstinately retorted, as occasions offered. In 1574, the Russians sent a large force to reduce the Tcheremiesie, which latter nation was soon compelled to submit. Indeed, for thirty years, nothing but disturbances took place; at last the Kazanners, feeling the superiority of the Russian character, placed themselves for a perpetuity under the banners of Feodor Ivanovitch, who had then succeeded to the sovereignty of Russia. As the power of the Tartars declined, so that of the Russians increased, and became at last so great, that the first viceroy governed it with uncontrolled power; any apprehension of rebellion had been avoided, by sending as auxiliaries to the Russian armies all the discontented

Tartars, together with their princes and murzas, most of whom found a grave in Livonia.

“ A few days after the capture of Kazan, the foundation of a stone church was laid on the very spot where the Russian standard was first planted. It was built in commemoration of the 2d October, which is still a fast day with the Greek church, and termed Caprian and Oustien. The cathedral of Blagaveshtshenskia, viz. glad tidings, was completed in 1562. The Tartar mosques were destroyed, and every means resorted to for the spreading of the Christian religion. In February, 1555, Kazan was erected into an archbishopric, comprehending the following dioceses: Kazan, Vassil-Gorod, Viatsk, and Sviagsk; the monastery of Sparsk for males, and that of Kazan for females; they were both founded by John Vassilovitch.

“ The possessions of the Tartar princes and khans were confiscated, and given to the clergy and children of the boyars; the commons were distributed between the Russian soldiers and those Tartars who embraced Christianity; while the common people of Kazan were enrolled as peasants of the crown.

“ The affairs relating to Kazan and its government, were conducted in a special court established at Moscow, and known, in the year 1599, by the name of the palace of Kazan. It took cognizance of the collection of tribute from the former Khans of Kazan and Astrakan, tried criminal and other causes, administered justice, and granted patents. In the reign of Boris, Feodorovitch-Koutchourn, the last of the Siberian Khans, was defeated, expelled, and his possessions seized.

“ During the rebellion which agitated the Russian empire in 1612, Kazan sided with the party

of the great patriot Posharsky, a native of this place. The troubles here experienced were, however, of no great import, nor of long continuance, as they terminated with the re-capture of Moscow. Kazan was also desolated in 1774, by the traitor Pongatcheff. He headed the rebellion on the banks of the Oural in 1773, and then threw himself into Kazan. From the 12th to the 15th of July, the city was given up to plunder and murder, and lastly to fire. The castle alone was preserved, previous to the arrival of General Michaelson.

“ During the reign of the Tzar Michael Feodorovitch, tranquillity reigned in the government of Kazan. His successor, Alexei Michaelovitch, commanded towns and other fortified places to be built for the defence of the southern parts. Simbersk was built in 1648, between which time and 1654, the Simberian line between the rivers Volga and Soura was erected ; it consisted of a rampart formed of earth and straw (Meakov). In 1732, the line between the Kama and Volga, called Sokamsk, was also laid.

“ In 1688, the Mishtsharacks were transferred from the neighbourhood of Alatier and Simbirsk, to the province of Ufinisk, as were also the Tcheremiesie and Mordva from the neighbourhood of Kazan to the rivers Sok and Tcheremshan. In 1714, a new government was formed, comprehending the cities of Kazan, Sviagsk, Viatka, Koun gour, Simbirsk, and Penza : this was again changed in 1780, by Catherine the Great, when all the former territories of the Khans of Kazan were divided into the following governments :—

“ 1st. The country of the Viatka, having the town of its own name as the seat of government.

“ 2d. The country situated near the upper part of the Kama ; Perm the capital.

“ 3d. The country between the Volga and Kama ; with the city of Kazan for its capital.

“ 4th. The country between the Volga and Sou-ra ; Simbirsk the capital.

“ 5th. The country between the Matka and Sou-ra ; Penza its capital.

“ 6th. The southern country between the Soura and the Volga ; Saratof the capital.

“ 7th. The country of Ufa had been already separated, in 1734, from the territory of Kazan ; and is called the government of Orenbourg. Ufa is the capital, since 1782.

“ In May, 1722, Peter the Great visited Kazan ; he established an admiralty and dock-yard for building vessels to navigate the Volga and Caspian Sea ; likewise a cloth manufactory for the supplying the army. The clerical seminary and the school for convicts were established in 1726. The college was founded in 1758 ; the university established in 1805, opened in 1814, and endowed in 1820.”

The learned professor has in his possession a variety of Tartar or Mahomedan manuscripts ; they all run in the same strain of simplicity. Among others I select the following, as giving, in a more concise manner, their own history of their country :—

“ In the year 707 (1300), from the time of calculating years, Aksak Toumier took the city of Bulgari from Abdoul Khan. Abdoul had two sons, one named Altoun Bek, the other Alem Bek ; both were khans. Upon the destruction of Bulgari, they proceeded to the banks of the river Kazanky, and

built themselves a city. The people under his subjection inhabited it ninety-four years, when the place became disagreeable, and it was abandoned. They then built another city at the mouth of the same river, and there they remained one hundred and fifty-eight years, when the race of the Mussulmen Khans terminated. At this time there was no Khan in Kazan; Shiek Ali was detained in captivity by the Russian believers.

“ Some time after this, the Russians, acquiring strength, appeared with all their forces before Kazan, for the purpose of taking possession of it. At this time Ivan Kalta reigned over Russia; for seven years they were unable to bring the Mussulmen to submit. Previously to the capture of Kazan, the Russians built a city at the mouth of the Sviag, in which they placed guns, a military chest, fire-arms, and stores of provisions. After this, Shiek Ali sided with the Russians, and, unknown to the Mussulmen, he ordered water to be poured over the gunpowder; and, lastly, he surrendered the city. The greater part of the people were killed or wounded. After this carnage, the Tzar obtained possession of Kazan; an event which took place in the year 959, reckoning from the Hegira (1552). The Russians acquired possession on a Sunday, and on the second day of the constellation of the Scorpion, that is, on the 2d of October.

“ The names of the Khans who governed Kazan are as follows: viz. the sons of Abdoul Khan, Altoun Bek, and Alem Bek. After these followed Machmoud Khan, Matiak Khan, Khalil Khan, Abraham Khan, Moukhammadamin Khan, Mamouk Khan, Abdallah Khan, Sakhil-Gheray Khan, Safe-Gheray Khan, Ali Khan, Outiak Khan, and Jadigar Khan. This last reigned in the year 959

(1552), when there was an eclipse of the sun. After him Kazan became subject to Russia."

Arabian inscriptions found in the market-place of Kazan :—

" God, the holy, the righteous, the just, and the majestic, said : All those who live in the earth will fade away, but the visage of the Lord, dressed in honour and glory, will shine eternally.

" Blessings and deliverance be to Mahomed, who declared the world not to be eternal.

" Also blessings and deliverance to the Lord, who said, The world is above all kings.

" In the year 936 (1529) of the hegira of Mahomed, in the month of Zoulkaghed, the son of Meukhammed Shakla was killed by the hand of the Christian Moukhammed Galay."

With these few translations I shall close my remarks regarding Kazan. Of Bulgari much less is known, although its site is but eighty miles from Kazan. It stood on a fertile and rich plain, and still boasts some interesting monuments of antiquity.

The wall which encompassed the city is still traceable, and is four miles in circumference. At present, a small village and church occupy a part of the site, the gardens being actually spread over a bed of human bones. I have seen some able drawings of the remaining monuments in the collection of Professor Fuchs.

The needful preparations being made for my departure, such as purchasing a new kibitka, procuring passports, laying in a stock of provisions, and bidding adieu to all friends, I set out ; and crossing a ferry of six miles over the Volga, against a N.W. wind, reached the first station safe. My baggage and horses did not arrive until near midnight, when we crossed two more ferries, the face

of the country being scarcely visible from the flood. Next evening I reached Tcheboksari, on the right bank of the Volga, having come over a fertile and beautiful country, tolerably well peopled, who were as civil and obliging as could be desired. Many extensive tanneries and tallow-refining places are in the neighbourhood. Tcheboksari has eight hundred dwellings and three thousand inhabitants, besides two conspicuous monasteries; its situation is romantic, and it has a considerable trade, especially of a fine tallow, which is much esteemed in England; it is, notwithstanding, a dirty place.

From Tcheboksari the road was very bad. I crossed a difficult ferry on the Soura, from the town of Vassil, and thence on to Nishney Novgorod, where I arrived at sun-set. The theatre had just closed, and I consequently met most of the wealthy people returning from it. The view of Nishney Novgorod from a distance of ten miles has a fine effect; the country is well cultivated, and I enjoyed the beauty and richness of the landscapes. I procured lodgings at a regular hotel, and waited upon the governor, but was again so unfortunate as not to meet his amiable English wife. The buildings for the new fair have increased rapidly, and have a handsome appearance; still, however, I feel far from convinced of their durability or safety from the encroachments of the river Volga. Many extra precautions, at a considerable expense, have been taken since I was last here; and the direction of the works has been taken from General Betancourt, and given to the Prince of Wirtembourg. Whether his highness is a better engineer I know not, but he does not bear that character, perhaps unjustly. The bank on

which the fair stands, has, in many places, been raised twelve, and in some eighteen feet. The church, theatre, hotel, government-house, guard-house, chancery, and public offices, are handsome structures.

There are two thousand seven hundred shops, which, when let, will produce seven hundred thousand roubles per annum, while the expenses have already amounted to seven millions, and it is supposed will require at least two more. The erection has most materially altered and benefited the appearance of Novgorod, which now contains thirty thousand inhabitants ; it is paved, kept clean, and well policed ; at least the upper town is : the lower town is still, of course, a place for the Jews and pedlars, filth and dirt attending it and them. My old Spanish acquaintances were still at work, and, although a little discontented at the fall of their patron, General Betancourt, were still doing well, and grateful to Russia.

From Nishney Novgorod I continued my route, and reached the large and handsome village of Bogorodskoye, belonging to the Count Sheremetieff. There are, in the neighbourhood, many villages belonging to the same young nobleman, as also several residences ready for his reception. This young count is not only the richest subject in Russia, but is more than comparatively the richest in the world. He has one hundred and sixty thousand peasants, and a revenue not far short of three millions of roubles. The village of Bogorodskoye contains nine hundred dwellings and five thousand inhabitants ; the situation is fine, and the country well wooded ; and such is the face of the country all the way to Vladimir, where I arrived at noon. I had passed the large village of Pavlovo, contain-

ing three thousand houses and fifteen thousand inhabitants, also belonging to the Sheremetieff family. Many iron manufactories are to be seen at work, and the country is highly cultivated. Numerous populous villages, all having a handsome villa, in a dilapidated state, attract the attention of the traveller. Mourom, Monacovo, and other small towns, are in the same condition; and the only difference I observe is the increased impudence of the post-masters; in some places I was exceedingly provoked with their extortion.

This conduct of post-masters is one of the greatest nuisances in the Russian empire, and is, in some measure, imputable to the government. A traveller arrives at a post-house, procures horses, and is about to depart, when an officer also comes upon service, and takes the horses from the traveller. It often happens also that a traveller arrives with a passport and order for horses, and, although there be plenty, the post-master will not give them under fifty per cent increase: this is the hard case in which civilians, and people not in the service of the Emperor, are placed. Government have punished several offenders, but the law and custom of procuring horses are bad. Why should not individuals be allowed to hire their own horses, without being subject to the compulsion of engaging them from the post-contractor? Speaking of the post, it may not be unamusing or useless to inform my readers, that to send a letter from one part of the Russian empire to the other, the postage must be paid in advance—a circumstance which appears to me to keep back education more than any thing else. There is a great difference, I presume, in paying to send a letter, of the contents of which a person is acquainted, and paying for the receipt of

a dozen letters coming from a parent or friend. It is said that many false letters would be sent by the ignorant and mischievous; this indeed might at first be the case; but let them be sent, they will thus become better educated, and, in the end, will know better how to employ their time; to say nothing of a considerable increase in the post revenue, which must take place as education expands.

The road from Vladimir to Moscow is a bad one, being a continual causeway. It rained hard, and my cart being leaky, the journey was exceedingly unpleasant. The approach to Moscow not a little exposed the absurdity of the belief, that the approach towards civilisation is the approach to happiness. The people more surly, the articles of life dearer, no hospitality, voracious appetite for gain, innumerable beggars, roads crowded with vehicles of all descriptions—such are the sure signs of approaching a capital, and such was the case as I entered Moscow's crowded streets, and put up at the London Hotel: which I recommend no one else to do, from its expensiveness, and the inattention and want of cleanliness of its owners. My stay in Moscow occupied me three weeks, there being no spare places in the diligence, which has been lately established upon a liberal and successful plan. The custom or patronage it has received from the public is unbounded, and the outfit is already repaid to the speculator.

I was most hospitably entertained by my old English friends, as well as by several of the nobility. I attended the opera and theatre, and paid visits to the numerous magnificent villas in the neighbourhood of Moscow, which are well worth the attention of the traveller, and forcibly reminded me of Old England. I also visited the new

walks and gardens of the Kremlin, and consider them as very handsome. The experimental farm which has lately been established by the Moscow Imperial Society of Rural Economy, and which is much patronised by the nobility of Russia, has met with success; its present president, the governor-general of Moscow, Prince Wladimir Galitzin, is a man of great merit and spirit, and has placed it under the management of my friend, Mr Rogers. I also visited the public prisons, which are conducted according to a plan suggested by the lamented Howard. They are far superior to those of the new capital; fifteen hundred prisoners are confined in them, seventy-five of whom are criminals.

The governor-general's late noble residence was destroyed by fire the last winter, and has not yet been rebuilt. The anecdote respecting it will be long remembered in Moscow. It was at a grand ball, and when the tables were already laid for supper, that the fire was discovered. It had long been seen by the watchman, but he could not think of giving the alarm, or disturbing the quadrilles and waltzes. When it was known, the company had barely time to escape before the drawing-room floor fell in, carrying with it the supper-tables, already covered with the usual delicacies and ornaments.

Among the most conspicuous personages in Moscow was Lieutenant Holman, of the Royal Navy, a blind poor knight of Windsor. I passed several pleasant days with him, and considered the accomplishment of my design of penetrating through Siberia as nothing, when compared to his determination of proceeding also. He related to me many anecdotes of his travels and *second sight*. What

object he can have, without a servant, in going to Siberia, I know not. He, indeed, may go there as well as any where else, for he will see just as much ; but there is so little to be seen by those who have even the use of their eyes, that I cannot divine what interest he can have to attempt it, without even a knowledge of the Russian language. If his journal, which may be made interesting, be composed of hearsay, as it certainly cannot be of ocular evidence, he will indeed have enough to do to record the information he may receive, and which can only proceed from exiles or criminals, and consequently not implicitly to be relied upon ; particularly, situated as he is, possessing hardly sufficient knowledge of the Russian language to appretiate duly the value of such hearsay information. His manuscript must become voluminous, and, of course, too bulky to be sent by private hands ; it can only therefore be forwarded by the post, where, without doubt, it will be subject to the examination of those whose duty it is to inspect documents of such a nature as this is likely to be, and will be treated according to its merit.

In every country, even in England, we find that foreigners should be careful of what they do, as well as of what they write, if they wish their packets a safe arrival to their destination : they should take care that nothing offensive to the government be inserted ; for frequently, as in England, truth is a libel, and the greater the truth, the greater the libel. Whether Mr Holman has already learnt this useful, and, to travellers, necessary lesson, time will develope ; if so, he may go where he will, and be received by every person in the empire with

open arms and warm hearts. I gave him letters of introduction to all my friends in Siberia, and shall feel most happy in his return. Who will then say that Siberia is a wild, inhospitable, or impassable country, when even the blind can traverse it with safety !

Upon my outward journey through this city, I had but little time to pay any attention to its situation, or indeed to any thing concerning it ; nor did I think it necessary, considering as I did, that every one was acquainted with the celebrated and ancient capital of the Russian empire. Upon my return, I had as little time as inclination to enter upon the subject, from other circumstances which it is here needless to mention. Suffice it to say, I now venture to give the translation of a somewhat curious and interesting document, which shows the state of this city in the year 1812, previous to the conflagration, and in the year 1818 ; only six years subsequent to what may be termed the total destruction of the most magnificent and extraordinary city in the universe. When this statement is attentively considered, it cannot, I presume, fail to strike the reader as affording a wonderful example of the exertions of the Muscovites in a cause so calamitous.

Moscow, standing upon more ground than any other city in Europe, Asia, or Africa, that we know of, to be reduced to ashes ; and, in the short space of six years, to boast an increase of two thousand one hundred and forty-one private dwellings, one thousand and eighty-one of which are of stone, and one thousand and sixty of wood, is a circumstance reflecting every honour upon the Russian empire. If, therefore, from its ashes, it could in

so short a time assume a grandeur superior to that formerly entertained of it, what must be its state at this moment, six years subsequent to the time I am now speaking of? Surely such a circumstance shows a spirit of emulation never before surpassed, if equalled, in any part of the world. Nor is it with this city, under similar circumstances, that I will stop; Kazan Orenbourg, Saratof, indeed several other considerable cities of the Russian empire, have each frequently shared the fate of Moscow; and yet they are no sooner burnt than rebuilt. A subscription is set on foot, under the immediate sanction of the Emperor, and the taxes are for a time rescinded with every class of so unfortunate a people. The cities of Russia, from being generally built of wood, are more than ordinarily exposed to the fiery element; in spite of the fact, that no country in the world has provided the same means of alarm, or a more expeditious mode of bringing the engines into play, than the police of St Petersburg. In illustration of this fact, I need but say, that in every quarter or division of the different cities, there is an elevated tower, with a look-out day and night, to give a general alarm, and telegraphic information, in case of fire. The general of the police is obliged to attend, and the engines, being attached to these alarm towers, of course are enabled to proceed direct to their destination. The general encouragement, nay, almost compulsive measures, adopted by the government to build with brick, will, it is presumed, prevent so many devastating conflagrations as some of the most wealthy cities have been subject to.

In the summer of 1812, the inhabitants of Moscow were computed at 312,000, composed of the following classes, &c.

Clergy	4,779
Nobility	10,732
Military	21,978
Merchants	11,885
Mechanics and artizans of all denominations . . .	19,036
Servants of the nobility, who remain in Moscow during the summer, to guard the palaces, &c. . .	38,404
Foreigners	1,410
Common population and peasantry	203,776
<hr/>	
Grand Total	312,000

This number certainly fell very short of the winter population, when all the Muscovite and other retired noblemen, senators, generals, and governors, return to the city to spend the Christmas and other holidays, as well as the Carnival. It is also not unworthy of remark, that at the period this census was taken, all foreigners had been ordered away; their numbers were not inconsiderable. French, German, Italian, Swiss, Dutch, &c. all, even the Prussians, were ordered away; all those nations having been in league against this mighty empire. The personal dependents upon a Russian nobleman are generally as numerous, and upon the same footing, as they are in Spain; they are a species of heir-loom of charity, they are never turned away, they are considered an expensive but necessary appendage, for without them much murmur would ensue. Thus these united considerations induce me to lay down the winter population at 400,000, or 420,000 souls.

That this population, in common with every other capital, will increase, I doubt not; especially if it continues to receive the support it now does, and more especially, if the Emperor Alexander makes good the hopes and expectations of the Muscovites, by making it the imperial residence

for a period of three or four years, while the winter palace at St Petersburg undergoes a proposed complete repair, if it be not entirely rebuilt.

That Moscow is a more advantageous spot for the capital of the Russian empire, than St Petersburg, there can be little or no doubt. It is a sort of central spot between the Caspian and Baltic, as well as the White Seas, besides other internal parts of the ancient empire, or dukedom ; not forgetting the most remote parts of Siberia, to which there is a noble water-carriage by steam, if properly carried into effect. The two rivers Moskva and Yaouza, with four canals, not a little strengthen my assertion ; they run into, through and round the city, and might be made of the most wonderful consequence, they being all that can tend to the necessity or comfort, as well as to the luxurious appetites, of the inhabitants.

Over these rivers and canals there are eight stone bridges ; there are now also ninety-eight bridges constructed of wood, while, in 1812, there were but seventy-two. Surely an increase of twenty-six bridges upon a destroyed city is an evident mark of improvement, and of facilitating the intercourse from one part of the city to the other. Nor is this the only proof of the desire which is entertained by the inhabitants, as well as by the government, to facilitate the means of communication ; the alleys, lanes, and narrow thoroughfares have increased from four hundred and one to five hundred and thirty-nine, while the principal, or first-rate streets have decreased from one hundred and eighty-three, to one hundred and sixty four. - The widening of these principal streets, and the greater extension of cross thoroughfares, have also tended to reduce the number of gardens attached to the houses of the no-

bility from one thousand three hundred and ninety-three, to one thousand and twenty-one; and although this falling off in the ornamental as well as useful part of Moscow has taken place, still has the latter increased proportionately upon other equally necessary works. Formerly there were but three thousand six hundred and seventy wells for water, while there are now three thousand seven hundred and ninety-three, being an increase of one hundred and twenty-three in six years. The ornamental sheets of water, as well as fish-ponds, have also given way to the increase of building, in a proportion of from two hundred and ninety seven to two hundred and fifty-three.

The public entrances to the city, as well as the number of parishes into which Moscow is divided are the same; the former sixteen, the latter twenty. The number of public squares is also still twenty-five; some of them are highly magnificent. Of other public establishments and buildings which have undergone no comparative change in condition or number, I will enumerate the following:—

1st. University, 1; 2d. Public colleges, 2; 3d. Public schools, 2; 4th. Charitable hospitals, 2; 5th. Imperial Palaces, 4; 6th. Cathedrals, 7; 7th. Burial-grounds, 14; 8th. Military arsenal, 1; 9th. Public charitable institution, 1; 10th. Edifice for the instruction of military orphans, 1; 11th. Military barracks, 9; 12th. Foundling, 1; 13th. Theatre, 1; 14th. Cannon-foundry, 1; 15th. Workhouse, 1; 16th. For poor widows, 1; 17th. Madhouse, 1; 18th. State prison, 1; 19th. Public club-houses, 2; 20th. Markets, 29; 21st. Infirmaries, 9; 22d. Slaughter-houses, 19; 23d. Signal-towers, 20; 24th. Watch-towers, 360.

Of religious edifices, the forty forties are now no

more ; superstitious bigotry is now sunk into the most tolerant of all religions ; for whether Catholic, Protestant, Jew, Mahomedan, or Pagan, they are all alike countenanced in Russia. The Court of St Petersburg appears to keep in mind the necessity of some religion ; thus we see its government countenancing those opinions which are most favourable to actual, though not to *nominal*, toleration.

In 1812 there were 296, now there are only 289 churches ; of convents for friars, there were fifteen, now fourteen ; while for nuns there were nine, now but seven—fourteen of one, and seven of another sort too many ! The private chapels still remain at thirty.

There are fifty-five public workhouses, as well as the same number of storehouses or granaries, five cavalry stables, though formerly but two ; twelve printing-houses, though formerly but eight ; manufactories now 376, formerly 442 ; public baths, formerly 41, now 33—THIRTY-THREE TOO MANY ! —private baths 600, formerly 1050, a diminution which, in the year 1818, can only be attributed to the fact, that the noblemen and principal gentlemen of Moscow, from the wars, or *corps d'observation*, had not at that time returned to Moscovy to superintend the erection of their baths ; a statement I am borne out in by the knowledge that each nobleman's and gentleman's house in Russia, is nothing without a bath ; they have all, at least of the rank of nobility, a steam-bath, besides a more common one for the use of the domestics.

The shops in the public bazar, and which are under the immediate nightly control of government, were, in 1812, six thousand seven hundred and seventy-six, now only six thousand one hundred and

thirty-six; private shops, in private houses, one thousand seven hundred and seventy-two, now but one thousand two hundred and twenty-six; private seminaries, chiefly kept by foreigners, there were seventeen, now twenty-two; and private academies now seventeen, formerly twenty-one. Although the gross number of these useful and scientific institutions will appear to be diminished, still it cannot but be allowed that the period has been so short as hardly to admit of a more extensive, or a more premature recovery from former *ills*. Of the reduction of schools in particular, I may be permitted to observe, that the very general adoption of the Lancasterian system of education through the whole empire, will alone be sufficient to convince the impartial, that so far from a retrogradation having taken place, a most wonderful advance has been made. These Lancasterian schools boast as many *hundreds* of scholars, as there were in the private schools *tens*.

There were, in 1812, one hundred and eleven, but now only one hundred and seven, hot-houses; kitchen-gardens there were two hundred and forty-eight, now two hundred and thirty-three; smitheries three hundred and sixteen, now two hundred and thirty-seven; inns and taverns six hundred and nine, now four hundred and six; restaurateurs two hundred and fifty, now one hundred and eighty seven; common eating-houses one hundred and eighty-two, now fifty seven; kabaks, or gin-shops, two hundred, now one hundred and thirty-two; beer-houses ninety-nine, now fifty-seven; wine-vaults one hundred and seventy, now one hundred and sixty-one; public baking-houses one hundred and fifty-nine, now one hundred and ten; bun-houses two hundred and seventy-four, now but one hun-

dred and forty. In this last account, it cannot fail to be seen, that there is a diminution of various sorts of edifices and establishments, which more peculiarly denote the apparent grandeur, importance, or population of a city. The diminution of the number of taverns, gin-shops, wine-vaults, &c. is from one thousand five hundred to one thousand, or one-third. To what can this be attributed? It is as fair to impute it to an increase of private morality, and a more domestic conduct of all classes of the Muscovites, as to a falling of public spirit. Probably the temporary conflagration of Moscow has done thus much permanent good; for a moment it so straitened the circumstances of the Muscovites, as to prevent that gross gratification of their appetites at coffee-houses, &c. in which they were wont to indulge; and that denial has now taught them the more solid enjoyments of home. With Russian noblemen and gentlemen, I can bear testimony to their abstinence at table in the use of wine or spirits; they dine early, and, as soon as dinner is finished, they quit the table for coffee.

When the last census in 1818 took place, it can hardly be supposed that Moscow was what it is; if the city rose from its ashes in 1813, and was, what we are given to understand as a fact in 1818, it will require little matter or manner to induce us to believe, that Moscow is what it never was, and that the absence of the court alone prevents it from being what no other capital is.

The reduction of the number of apothecaries' shops, from twenty-nine to twenty-five, carries with it an air of *apparent* mystery, not so *in fact*. So far from being an inconsiderate or inattentive act, it implies the more unequivocal proof of the good disposition of the government. No person can now

sell medicines who has not passed a public examination ; no medicines can be sold, except at a stated price ; any adulteration or surcharge is at the risk of the apothecary ; and all medicines must emanate from the imperial laboratory, which is most generally supplied from the magazines of England.

The lighting of the city I can also say is very good, although the actual number of lamps has decreased from seven thousand two hundred and ninety-two, to four thousand three hundred and forty-one. This fact is, however, but a proof that the introduction of better lamps acting upon wider streets, has had a good effect. During a very great part both of summer and winter, there is hardly any occasion for a lamp ; in the one season, they have light from an eternal sun, moon, or stars ; and in the other, from the constant reflection of the snow, aided by the periodical appearance of moon or stars, as well as the generally clear atmosphere of Moscow, at so cold a season.

This comparative exposé will speak for itself ; I should not have introduced it, but for the defect appertaining to publications relating to Moscow. Of the numerous public and private edifices which that city contains, of their antiquity or origin, I shall not enter upon ; enough by other writers has been said ; I will, therefore, close the comparative account of this city to resume my journey.

Having seen Mr Holman safe upon his road, under charge of the Cossack who had accompanied me from Tobolsk, I took my place in the diligence for St Petersburg, in company with a Mrs Bradford, widow of an English purser of the navy, and a Lieutenant Read, of the Royal Marines, besides a young man under my charge from Kazan, in ill health. I regretted quitting the hospitable and

friendly society of Moscow, which, in my opinion, is superior and more refined than that of its sister capital, and which, probably, arises from the circumstance of its being almost exclusively inhabited by Russians, many of whom, after having filled with credit and honour the first offices of the empire, retire to Moscow, there to pass the remainder of their days in peace, tranquillity, and good society ; as that capital is much more free, independent, and unshackled by the police than St Petersburg. In Moscow, observations are openly made on any unpopular act of the government ; its senators have a very superior voice, and great attention is paid by the ministers to their representations. The nobility of Russia possess very extensive privileges and power, and if the government must be called a military despotism, it is a well regulated one ; and happy are the people when it is governed, as now, by a prince as unambitious as he is humane. It is true, that its immense standing army, near a million of men, in the hands of a prince differently inclined, would be a terrible engine of destruction, as well against the lives as the liberties of Europe. The power of Russia is still more formidable, when it is considered that the army is composed of hardy, bold, enterprising, and needy men ; who, go where they will, must be better off, either as to climate or productions, than at home. The present military expenses amount, I understand, to two hundred and fifty millions of roubles per annum ; a sum almost equal to two-thirds of the revenue, for an army far surpassing what may be deemed truly necessary in times of profound peace ; the expense of which will be considerably diminished, if what I have heard be correct, viz. that three hundred thousand men are to be reduced.

Leaving this matter for more able politicians, I resume my journey in the diligence, in which I reached the handsome town of Klinn, and remembered the portal in the church where I had slept upon my outward journey. We reached Tver the next day, averaging about five miles and a half per hour. Having purchased of the people at Torjock some few articles of leather, such as embroidered boots, shoes, and gloves, we continued an uninteresting route; staid at Vishney Volotchok to dine, and then entered upon the high road, which is M'Adamizing, and will, when finished, be a most beautiful one; three more years will be required to complete it. Passing through Valdai, I again enjoyed the beauty of the scenery, the lake, and the insulated Iverskoy monastery. I reached Novgorod, crossed the river, and passed close to the new military colonies, of which the city of Novgorod, as I was told, is to become the head-quarters. The experiment of this new system will be only extended to the peasants belonging to the crown, and the chief objects expected to arise from it are, first, the cheap maintenance of a large militia force in times of peace; second, the replenishing of the regular armies, when war shall demand it, by a people already accustomed to military manœuvres and the use of arms; and, lastly, the doing away of the old feudal custom, which hitherto has been pursued, of recruiting the armies from the peasants of the nobility. The two last considerations will enable the Emperor of Russia to equip a better and a more numerous army, and in less time than could formerly have been done; yet, notwithstanding these favourable considerations, especially to the possessors of peasantry, and the advantages, in a pecuniary point of view, to the empire, much appre-

hension has been expressed of the dangers likely to arise from putting arms into the hands of the common people, and thus giving them an opportunity of forming intimate connexion with soldiers. The compulsory manner in which these peasants were forced into this new militia service, met, at first, with considerable objection, and, in some cases, with resistance ; but I believe the disobedience did not continue long, at least I have heard nothing to the contrary. The unpopularity of the measure, perhaps, is not singular, and arises from the fact, that most new systems begin by being equally unfortunate ; Count Araktcheef, according to Dr Lyall, is the author of it. His excellency is certainly one of the most confidential advisers of his Imperial Majesty, as well as powerful noblemen of the present day ; but whether in this case, his excellency's advice will ultimately prove beneficial or injurious to the Russian empire, time only can develope ; certain, however, is it, that still the measure is badly received. Novgorod has, no doubt, benefited by the proximity of the colonists, as also have the numerous villages in its vicinity.

We reached the environs of the capital about sun-set, and safely arrived at the ill-attended, dirty, and extravagant hotel of Mrs Rea. I thought, however, that a few days of uncomfortable lodgings was no hard case to me, whatever it might be to others, and therefore I would not remove. Mr Page's is, beyond all question, the best, most respectable, and, in the end, the cheapest hotel in St Petersburg, from which I had been absent exactly three years and three weeks, and to which I had returned in infinitely better health than when I left it.

I was soon engaged at all sorts of dinners and

entertainments, but was too anxious to get a passage by ship to the land of malt, to allow my accepting them. I engaged the cabin of the *Peter Proctor*, the master of which ship had, on that day three months, dined with my father in Dominica, and left him in health and happiness; this news was a gratification I did not expect to experience so soon. The vessel being to depart with the first fair wind, I had but time to pay my respects to the Count Kotchoubey, my friend and protector. I tendered to his excellency my journal, offering to leave it in Russia, should his excellency desire it. The Count said, "No, take it to England, publish the truth, and you will do more good than fabricating or inventing things which do not exist. Tell the people of England how you have been treated in Russia, but, at the same time, let us know what you have seen." I left his excellency, who was on a sick-bed, penetrated with the highest sentiments for his virtues and affability, and paying my respects also to Sir Charles Bagot and Sir Daniel Bailey, I completed my official reports at the court of St Petersburg—with the exception of one to the governor-general, Count Miloradovitch, respecting my passport, which was granted immediately, upon my own terms. It seems that a late smuggling transaction, carried on at Cronstadt, has involved several English merchants, as also Russian officers, who are by birth English. Many people who got passports to depart, have gone, leaving very large debts unpaid; consequently, the governor-general made a rule, that any Englishman about to quit the empire, should give information three times in the gazette, and also lodge securities for any debts. I represented my anxiety to depart, and that the ship would sail in a few days, or the first fair wind. I

was provided with a passport on the spot, and thus received the last act of kindness which it was possible to bestow.

Sir Charles Bagot did me the honour to mention many kind inquiries on the part of his Imperial Majesty, in my absence, respecting me, which do honour to his heart, and to human nature, and at the same time, increase the many obligations I am under to his Majesty, who has my heartfelt gratitude. Such is the reward, to me invaluable, for all the troubles and difficulties I may have endured upon my long journey. The Emperor had frequently in my absence inquired into my pecuniary situation, and as often made a tender, through Sir C. Bagot, of any assistance I stood in need of, which I was bound to decline, in consequence of my being everywhere received in such a manner as almost to render money unnecessary. His Imperial Majesty also frequently expressed a fear that I should not be able to surmount the difficulties incident to a voyage of the kind; in short, that I should not again reach Europe safely.

CONCLUSION.

I WAS not a little flattered to learn from Sir Charles Bagot, personally as well as by letter, that no part of my conduct had met with the smallest disapprobation from the Russian government. My object had been to avoid the rocks and shoals which travellers usually split upon ; and while with the natives, I studied to accommodate myself to their manners. I uniformly ate, drank, and slept with them ; dressed in the same way ; bore a part of their fatigues, and participated in their recreations ; and, I hope, made myself an acceptable, instead of a disagreeable guest.

If I have morally erred in my wanderings, I am sorry for it ; I am unconscious of any harm done to any one, and if, in these pages, I have said more than was prudent or necessary, it has proceeded from a desire to tell the truth ; if, in telling that truth (which ought not always to be told), and in drawing comparisons, I have incautiously hurt any individual, I shall deeply regret it. There is, however, so little of interest in Siberia, so little to be

seen, that it is hardly possible to form an interesting work on that topic, unless the traveller be a botanist or naturalist, or otherwise versed in the mysteries of science. Siberia is, in fact, one immense wilderness, whose inhabitants are so scattered, that five or six hundred miles are passed by travellers without seeing an individual, much less any cultivation, or any works of man at all worthy of description. The manners, customs, and dress of most of the inhabitants are the same. The severity of the climate is in most places co-equal, and, in general, productive of the same results. The matter of interest is to be compressed in a small space; and all that I may be said to have done, may consist in the fact of showing others, that man may go where he chooses, as long as his conduct corresponds with his movements, and that he may, fearlessly and alone, as safely trust himself in the hands of savages, as with his own friends. I do not say the same thing for a party of travellers: I adhere to my idea stated at the commencement, and I think I should often have not only been without food, but have run the chance of being starved, had I been accompanied by only two or three attendants more than I had.

If this narrative of my journey shall have the least beneficial effect in any way—if it prove of the least service in guiding the future traveller, and better preparing him for the evils incident to a journey of the kind, I shall be gratified, and consider my time as not thrown away. Experience has taught me many things I knew not, and which at first view may appear frivolous; but I am not one of those who insist on the necessity of using great foresight—that foresight has a tendency to beget timidity or distrust. In my apprehension, he is the wisest

and most successful traveller, who goes at once into his journey, dependent only upon the reception which the ignorant and brutal will *give him* ; and not the traveller who relies upon a well-lined purse. I feel convinced that compassion is the leading characteristic of those who are termed barbarians; and that man, in a state of nature, will freely give to the distressed that bread which he would not sell for money. I am confident that man is really humane, and that he gives more from the dictates of a good heart, than from ostentation. I have received food from a family who were almost in a starving state ; and am therefore justified by grateful experience in affirming, that those people who are the most ignorant and uncivilized, are the most hospitable and friendly to their fellows.

APPENDIX.

APPENDIX,

REFERRED TO AT PAGE 227 OF VOL. I.

SETTING aside the literary demerit of the following letter, written from the shores of the Frozen Sea, during the winter of 1820-21, and addressed to the *Secretary and President* of the Royal Society, instead of to the *President and Secretary* of the same learned body, I may be permitted to observe, that I do not think I erred in so addressing my letter, although such fact appears to have been, and still is, the principal reason why so little notice has been taken of it, as not even to entitle me to the forms of office, or even to that which is due from one gentleman to another, viz. the acknowledgment of its receipt, until extracted by application.

When I wrote the letter, the late venerable President, Sir Joseph Banks, was numbered with the dead. The fact of the chair being vacant, and I abroad, without the possibility of knowing what was doing in England regarding a successor to so great a man, will, I am certain, convince the public, if not the scientific Sir Humphrey Davy, that I could never have intended any disrespect to president or secretary, much less to any other indivi-

dual member of the Royal Society, with not whom I was personally acquainted. It was only impossible for me to have divined upon so honourable an office would have devolved it appears that the learned body in general to have had some doubt as to the most proper person to succeed Sir Joseph Banks : to remedy a loss was not only difficult, but impossible ; and why was the chair so long vacant ? In short I addressed my letter as giving an opinion or information to the learned body in general ; and neither studied compliments nor disrespect to president or secretary.

It was my intention to have taken no notice of the silence of the executive of the Royal Society, or of their ignorance of the forms of good breeding ; I was unwilling to think of a body, as I do not think of the executive of that body, conscious that not three of the *Fellows* were aware of the treatment I had received. One of them, however, with whom I had become acquainted very recently, recommended my writing to Sir H. Davy, demanding particulars as to the receipt of my letter, &c. ; and, in the event of my not being satisfied, to lay it before the public. That friend's advice I followed, and accordingly addressed to the president the following letter :—

“ SIR,—From Nishney Kolymask I had the honour of addressing a letter to the Secretary and President of the Royal Society ; the letter bearing date January, 1821. Not having been made officially acquainted whether such letter has been received or not, I beg to make inquiry of you, as the President of the Royal Society ; and I further beg to know, in the event of its having been

received, what has become of it, and what reception it has met with:

“ The letter having been written in reply to a book or paper from the pen of the late Captain Burney, which was read before the Royal Society, will, I am certain, have induced that learned body to grant the same indulgence to my letter as to that of the late Captain; if only in consideration of the interesting subject to which it referred, viz. the solution of the problem as regarded a junction of the continents of Asia and America.

“ You will further oblige me by stating the period at which my letter appears to have reached the Royal Society.

“ I have the honour to be, &c. &c.”

“ To Sir H. Davy, President R. S.”

To the above I received the following reply from Mr Lee, the Assistant Secretary.

“ SIR,—I am directed by the President of the Royal Society to acknowledge the receipt of your letter, and to inform you that the paper to which you allude, dated 10th January, 1821, and addressed to the Secretary and President of the Royal Society, has also been received, and *will be returned* to you, on your applying for the same, or to any person producing an order signed by you for that purpose. I have the honour to be, &c.

“ S. LEE, Ass. Sec.”

The above produced the following from me to Mr Lee.

“ SIR,—I have received your letter, written by directions of the President of the Royal Society.

You will deliver to the bearer my letter from the Kolyma, bearing date January, 1821, as also my letter touching the fair of the Tchuktchi. You will at the same time acquaint Sir H. Davy, that my *request* to be informed at what period my letters were received by the Royal Society has not been attended to, and that the nature of his reply does not seem to infer that I shall be made acquainted with such circumstances ; if not, then I can only say, I shall have cause to think even worse of their conduct towards, sir,

“ Your obedient servant,

“ JOHN DUNDAS COCHRANE.”

Thus ends my correspondence, which only produced my letter from the Kolyma ; the other, touching the fair of the Tchuktchi, has been withheld ; but what astonishes me is the determination of the President, to keep me unacquainted with the precise period at which my letters *reached the* Royal Society. What can account for so apparently immaterial a circumstance ? To those who are unacquainted with the formula or routine of business by which the affairs of the Royal Society are governed, this will indeed appear a trivial circumstance, a neglect, or an oversight on the part of the President or the Secretary, (the former of whom, I hope, is satisfied with the precedence I gave him in *this* letter,) or probably no register is kept of the receipt of documents of the kind ; be it so ; I excuse it, simply remarking that, if true, it is a *slovenly* way of doing business. To enable them, however, to refresh their memories, I will tell them *when* they did receive such letters ; more than that, I will try and divine what is the reason for their refusing to answer my question.

May not information be given to a learned body in a language intelligible, yet not complimentary or polished? May I not have started some topics in this letter which the learned body thought were not irrelevant to the subject? And may not my ideas have been pirated, and made use of by some Fellow or Fellows of the same learned body; and been introduced into reviews or magazines as the productions of their own brains? Or did my ideas so intimately coincide with some other person's, to allow me to meddle with such a subject as north-west discoveries? Is there a freedom in my language which ill suits the dignity of that learned body? Have I been too severe or too familiar with one of that body? and was it respect for him that caused their opposition to me? Or is it, that a foolish book and memoir may be printed by a Fellow of the Royal Society, and listened to by them in general, but can only be replied to by one of their own Fellows, and no other person be allowed to criticise so foolish a subject? If so, then congratulate myself upon not being an F.R.S.

Time will show why they refuse to answer my question; the President, I am certain, was *displeased* at my having *displaced* him, yet such is the *ostensible* reason. My letters arrived in time to be made use of by others, and neither Secretary nor President (I beg the latter's pardon) say that *they only* have seen those letters; therefore the return of them does not arise from formality of address; there is something more, a discovery which they fear I shall make, which will show how illiberally they have

long ago knew my letter had been *officially*

received and privately canvassed; it was this which displeased me, and which induced me to inquire when it had been received, and what fate it had met with. These questions have been simply answered, that I may have the papers back again. In the mean time, it is not impossible that they may have been made use of; for they were received by the Royal Society in 1821. Had my letter been returned as informal, I should have bowed to their decision; had it been rejected as unworthy the attention of so learned a body, I would have been silent: or had the subject been one without the proceedings of the Royal Society, I should have been content: this last cannot be, unless their own members only are to be allowed to address them, for the subject is one that materially engaged their attention for a considerable time. At least two of their members took a most active part in the investigation of so interesting a subject; therefore it cannot but appear, that whatever credit I may be entitled to, I am not to have it. To deny this, let either President or Secretary *over that none have seen my letters but them.*

These are some of the reasons why I am induced to bring the subject before the public; it is not the want of courtesy—it is not my vanity which is piqued—it is not an undue value which I put upon the letter in any of its bearings;—it is the interesting subject, and the importance of it in a geographical point of view, which prompt me to cope with such a host. I am aware of the difficulties I have to contend with; I am aware that I shall raise the spirit of a part of the literati; yet still I feel justified, as, in addition to these reasons, I am certain that the inferences I drew, and the conclu-

sions I arrived at, have proved, and will prove, satisfactory.

That the literary demerit of my letter may have sunk far below the horizon of any other document attempted to be laid down for the consideration of the learned world, is a charge I may plead guilty to; but I insist on the unanswerable arguments contained in it, which I wished to have introduced into the first edition of the Narrative of my Journey through Siberia and Tartary—having, as it had and has, a direct reference to the object I had in view, when I, alone and on foot, undertook the arduous task of traversing Europe and Asia to their most north-eastern limits; there to ascertain, by ocular demonstration, whether Asia and America did or did not join. This was the object and subject of my letter; and, *malgré* the opinion entertained by those who have *uncommon* sense, I now give it to those who have a little *common* sense; let the latter form their opinion, and decide whether any one can *now* doubt of the separation of the two continents.

At this moment, when public opinion is so much interested in the pending expeditions under Captains Parry, Franklin, and Lyon, I feel confident the following letter will not be void of interest; as little will the remarks and ideas which I suggested in the New Monthly Magazine for May and June, 1824, to prove the *impracticability* of a north-west, and the *probability* of a north-east passage round the continent of America; as also my ideas upon the inefficient means about to be adopted by the land expeditions. Requesting the reader's indulgence to the letter, and to the ideas which followed that letter, assisted by the little map, I will begin it.

“ TO THE SECRETARY AND PRESIDENT OF THE
ROYAL SOCIETY.

“ Nishney Kolyma, lat. 68-33 N. Jan. 10—22
1821. Long. 166-30 E.

“ GENTLEMEN,

“ The universally lamented death of the late venerable and patriotic President of the Royal Society, Sir Joseph Banks, whom I had sometimes taken the liberty of addressing, will account for my now troubling you ; and although I am conscious that my limited education exposes me to numerous errors and disqualifications, *possibly to ridicule*,* yet am I willing to brave them, in consideration of the interesting subject to which I think it my duty to call your attention ; and in the execution of which I hope it will appear that I am guided by a wish to serve the public, and neither to court applause nor draw forth censure.

“ It is not often that I am favoured with the sight of any literary publication ; my wandering life precludes the probability of such a treat ; but here, in one of the most remote corners of the Russian empire, and of the universe, where nature defies the power of art, where no verdure quickens, and where all is frozenly cold, save benevolence and humanity ; here, in such a place, I have found one, a recent one, purporting to come from the pen of Captain Burney of the Royal Navy, (a gentleman for whose literary talents I have the greatest respect, however much I think he has misapplied them in this instance,) entitled a ‘ Chronological History of North-Eastern Discoveries, and of the

* This remark is truly verified.

early Eastern Navigation of the Russians ;' too modest a title for such a complicated production, where war, history, and politics alike engage the attention ; where virtue and vice are alternately seen predominant, and where many subjects are treated of in a copious manner ; indeed, where nothing appears to have been neglected, except that to which the title-page gives birth. It would be a matter of speculation to decide upon what subject the Captain has most descanted ; among others, I would fain know whether he has *really* had in view the proving that no expedition or navigation has been performed round the north-east of Asia, and the consequent *possibility* of there being a junction between the old and new continents ; or whether he will not appear to have been desirous of giving the world a fresh account of the lives, deaths, and characters of Captains Cook and Clerke, with a history of the Russian and Chinese wars, and a continued and irrelevant abuse of the former nation, not omitting his dissertation upon the Japanese empire, nor his remarks upon American vassalage, independent of his astronomical, philosophical, and critical observations. All have alternately, and at renewed intervals, engaged the attention of his fluctuating pen ; and, I think, have contributed to hold him forward as the most partial and unjust reasoner that ever ventured to appear before the public. I shall endeavour, in the following pages, not only to make good this assertion, and prove that not only a navigation has been performed round the north-east of Asia, but I will also draw forth a conclusion as to the most probable situation of the, so called, *Shelatskoi Promontory*.

“ In replying to Captain Burney's book, it will

be impossible for me to follow him through the three hundred pages of his heterogeneous matter ; it is unnecessary, and my time will not admit of it, nor am I so disposed ; I will be content with following and combating those arguments which relate to the geographical question, and leave to others those which refer to a more abstruse and logical definition.

“ It appears to me very extraordinary that Captain Burney should, in the second page of his book, admit, that there *can be no doubt*, but that, in the time of the elder Pliny, *distinct information* had been received by the Romans concerning the north coasts of Europe and Asia. Pliny remarks, ‘ Asia is beaten upon by the main ocean in *three parts*, north, east, and south.’ If such be the case, to what purpose has the Captain written his book ? certainly not to prove a negative, for he admits the affirmative, as evidently will appear by his extracting that part which relates to the Scythian and Tabin Promontories. Had Captain Burney confined his remarks to the probability of land existing north of Behring’s Straits, I should have joined in the same opinion ; but I think any attempt to prove the probability of a junction of the old and new continents, ought to be deprecated as wild and visionary, and certainly in direct opposition to the opinion of his great master, Cook.

“ In refuting the arguments brought forth by Captain Burney, I shall confine myself to the voyages of Deshnew, Pavlutzki, Stadukin, Shalauoff, Cook, and Billings, with such remarks as may arise therefrom. I select these as the most famed, and likely to answer the end proposed ; it is true, they are the most material in my favour, but I would really select others to invalidate them, could I find

any. So extraordinary is it, however, and so deserving is it of attention, that, of all the voyages and travels related in his book, and which have been presented to the public to prove the *probability* of a junction (vide page 293) between Asia and America, not one of them holds out a hope of the kind, or expresses a doubt of their separation : on the contrary, they all bear in mind the existence of a north-east promontory, and their object has been to sail round, or, technically speaking, to double it.

“ In the year 1648, Simon Deshnew sailed, for the second time, upon his remarkable expedition, consisting of seven vessels ; four were never afterwards heard of. What became of the other three vessels ? Deshnew simply says, ‘ that after great danger, misfortune, and the loss of part of his shipping, he reached *Tchukotskoi* Noss, which extends very far into the sea, and is situated between the north-east and north, and over against which are two islands, whose inhabitants wear artificial teeth ; and that the coast from that promontory turns, in a circular direction, towards the Anadyr.’ Now, if this simple statement be not a clear and a descriptive one, I know not what can be so termed ; especially if we refer to the period of time when it was written, to the person who wrote it, and to the circumstances which called forth that writing. It was on that *great Tchukotskoi* promontory that Ankudinoff’s vessel was wrecked ; and it appears, by Deshnew’s papers, that ‘ it was the FIRST GREAT PROMONTORY he reached after leaving the Kolyma ; nor, in his subsequent quarrel with Soliverstoff, does he appear to me to prevaricate or contradict the first assertion ; for although he says, ‘ *there is another promontory, called Svatoï Noss,*

he does not, like Captain Burney, term it a *great one*: on the contrary, he treats it with indifference; for, when speaking of the *great promontory*, he says, ‘*Tchukotskoi Noss* is not the *first* promontory, but another FAR MORE considerable, and very well known to him,’ &c.

“ I have been thus particular, because a material difference may arise from making use of the word GREAT without authority.

“ It appears to me from Deshnew’s narratives, his reasonings and comparisons, that *no great promontory*, and which we term *Shelatskoi Noss*, does exist, (neither is there;) and that, as there was nothing extraordinary in the appearance of the land from the *river Kolyma* to *Tchukotskoi Noss*, he, of course, could not describe any. But even if there be any remarkable or intermediate promontory or lands, a variety of circumstances might have contributed to keep them from his view,—the distance at which he kept from the shore, the prevalence of fogs, &c.; at farthest, in short, Deshnew’s conduct could only be termed careless or inattentive. Deshnew was not a seafaring man, quite a sufficient reason; nay, I am of opinion that he would not have described East Cape, *Tchukotskoi Noss*, or the other many particulars, had it not been in defence of a discovery of a korga, or sand-bank, at the mouth of the Anadyr, and of which he was about to be unjustly deprived. As to the appellation of *Soa-toi Noss*, Sacred Promontory, it implies nothing, although from the time of Deshnew, it appears to have lost it, and to have gained that of *Shelatskoi Noss*.

“ Having stated thus much in behalf of Deshnew, and having accounted for his silence or negligence, I will leave him, and draw your attention

to the ingenious and novel, but untenable, argument of Captain Burney, as relates to shitiki and their use. Had he known more of this subject, he would not have so boldly asserted what was not, what is not, and what cannot, be the case ; he would never have said that, *‘on account of the frequency of being enclosed in the Icy Sea, it was customary so to construct vessels, that they might with ease be taken to pieces, carried to the outer edge of the ice, and be there put together again.’* This is indeed an extraordinary, unauthorized, and ridiculous assertion of Captain Burney’s ; it is a ridiculous mistake, fit for him to tell the soldiers. Such was not the reason for so constructing shitiki ; for they were built also at Okotsk and Kamtchatka ; they were so built from *unavoidable necessity*, if the want of proper materials or of sufficient funds can be so termed. *No iron was to be had, or the cost of it was too great for Icy or Eastern Sea speculators.*

“Allowing, however, to Captain Burney the full benefit of his ingenious assertion and argument, as relates to the intention for so constructing shitiki, I then deny *the possibility of ‘so employing them, and of so easily taking them to pieces,’* &c. The twisted osiers which Captain Burney speaks of, were made from the soft green bark and branches of trees, applied in a green state ; to unlay which, after being once settled in their places, were to destroy them. Had this facility of navigating the Icy Sea really existed, where no risk was apparent or contemplated, we should not have had to deplore the loss of so many adventurers ; we should have had transmitted to us the result of many voyages, and the description of many lands of which we are still ignorant ; we should have seen this in-

genious facility of navigating the Icy Sea not only continued, but improved upon, whereas now it is forgotten. *

“ I will go farther still, and allow Captain Burney the full measure of his ingenious assertion, of the intention, as well as the facility, for so employing shitiki ; yet, in the case of Deshnew, it will appear most improbable, if not impossible ; especially if it be considered how short is the period allotted for a task of the kind. That, in those days, eighty or ninety Cossacks (in whose praises the Captain is otherwise wonderfully sparing) should *unload, re-rig, and unbuild three vessels*, carry them and their contents over an isthmus, or round a promontory, then re-build, re-rig, and re-load them, (annoyed and endangered, as they would have been, by a bold and active enemy, in the Shelages, who, Captain Burney says, lived there during the campaign of Pavlutzki,) and resume their voyage in so short a period, must appear impossible. The provisions for some months which they carried, their arms and ammunition, the masts, sails, and cordage, as well as the vessels ; to transport these in so rigid a climate, independent of other obstacles, must have prevented a task of the kind being completed ere winter had commenced, and prevented a retreat. The nature of the climate in the Icy Sea is such, as to render *impossible* a thing of the kind in a general way, and highly improbable, even by way of experiment. So much for shitiki and their use, as

* How comes it that Captain Burney should have permitted four of Deshnew's vessels to be no more heard of, when the rest of his squadron had such a facility of escaping dangers ? These are, however, such speculative and inventing times, that an hermaphrodite vessel is to be sent to the North Pole, to go upon land, ice, or water.

well as their uselessness, for they are no longer used : some additional reason for supposing that the intention for so constructing them was not such as described by Captain Burney.

“ There was another class of vessels, called *kotches*, very frequently used in the Icy Sea, and which were built upon the river Lena. I wish to inform Captain Burney, that the word *kotche* is not derived from any peculiarity in the construction or in the rigging of the vessel. The word is derived from *kochevat*, to wander, and is rather a Siberian appellation, as they were employed in transporting new settling or wandering families, and hence gained the appellation of *kotches*. What their construction or mode of rigging then was, I am not aware ; but they were secured with iron, sent down the Lena to Yakutsk. That Deshnew's vessels were *kotches*, there can be little or no doubt ; for the vessels in which he sailed from the Kolyma, he had previously brought from the Lena and Indigirka, as is related in one of his memorials ; besides, the Kolyma could hardly have produced seven vessels in so short a period, whether in the shape of *kotches* or *shitiki* ; the establishment had only existed three years, viz. from 1644 to 1647, in the latter of which years, Deshnew made his first, but unsuccessful, attempt.

“ Muller has translated them *kotches*, while Pallas has said they were vessels. I believe they were both correct, for I need not say that a *kotche* is a vessel, and a vessel may be a *kotche* ; whereas both would have been wrong, had they translated *shitiki*. I will conclude with saying that, if ever Deshnew did reach *Tchukotskoi Noss* with the vessels in which he sailed from the Kolyma, (and which, strange to say, has not been doubted,) that he could

only have so done by sailing round the north-east of Asia; and thus there can be no reason for doubting the testimony of Deshnew.

“ To strengthen the opinion that Deshnew did double the celebrated Tchukotskoi promontory, I will, out of chronological order, quote the voyage of Captain Cook, a voyage which Captain Burney bore a part in, and I think will serve to destroy the hypothesis of the latter gentleman, of the probable junction of the two continents, *vide* page 300. Upon referring to the situation of the *Discovery*, when off Icy and North Capes, it appears, the former bore south-south-east true, and no land visible north or east of it; the latter bore west-half-north by compass, no land being visible north of it, although the horizon in that quarter was pretty clear,—a circumstance which induced Captain Cook to say, that from Cape North, ‘ he thought the land would be found to take a very westerly direction;’ and so it will, in the event of no *great** promontory existing. Such I take to be the case, after an impartial review of the voyages under consideration. I think the land from Cape North will be found to take a very westerly direction, to a promontory not far distant; which promontory and the island of Sabedei are the extremes of a spacious bay, which Shalauoff visited,† but which Deshnew might have passed without noticing or even seeing. Although Captain Cook was of opinion there is land north of Behring’s Straits, he did not suppose such land to be a continuation of Asia or America; on the contrary, from judging by his remarks, he evident-

* By looking at the actual survey of the north-east of Asia, no *great* promontory will be apparent.

† This is literally true.

ly thought Icy and North Capes the north-west and north-east boundaries of their respective continents.

“ The next voyage which I will select for your attention, was performed by one Taras Stadukin, a great favourite of Captain Burney’s, as supporting an hypothesis he declares not to have formed ; but to prove the *probability* of which, he presented a memoir to the *Royal Society*, and wrote a book, It is necessary to inform you, that the account is not derived from Stadukin, but from one Nikiphor Malgir, of notorious memory, as will hereafter appear. Malgir affirmed, that a merchant, named Taras Stadukin, did, *many years* before, relate to him, ‘ that he sailed in a *kotche*, with ninety men, from the Kolyma, to make a discovery concerning the GREAT *Cape of the Tchuktchi* ; * but that not being able to double it, they had crossed over on foot, where they built *other vessels*.’ Captain Burney says, this deposition ‘ is the most deserving of attention ;’ and yet, ere he can make it of service in support of the new hypothesis, he is obliged to convert *a kotche into a shitiki, take that shitiki to pieces, carry it and contents over an isthmus, put it together again, proceed upon his voyage, and not allow him to build other vessels, as this favourite deposition affirms*. Captain Burney first tears the deposition to pieces in its most material parts, imitates another, like a true sea voyager, vide page 110, and then terms it *a circumstantially described voyage of Stadukin’s, as related by Malgir*. What does it discover ? What does it describe ? What, at most, does it amount to ? Merely that one Malgir affirmed, that one Stadukin had told him, many years before, that he

* i. e. Tchukotskoi Noss.

had sailed in a kotche, from the Kolyma to a certain place, where he left her, took a walk across a neck of land, built another vessel, and resumed his voyage. This is the sum of this favourite deposition in behalf of a name fruitful in enterprise. And yet Captain Burney changes the most material parts of it, that he may the more consistently take the same liberty with the memorials and documents of Deshnew; in short, Captain Burney has made two voyages upon *paper*, which were never performed upon *water*.

“ It is indeed a novel and extraordinary mode of reasoning, that because one man does relate an intermediate circumstance, which might have happened upon his voyage of discovery, he alone is to be believed, to the prejudice of another man, because that other man does not relate an intermediate circumstance, which might not have happened to him on his voyage of discovery; this is indeed absurd reasoning and weak argument for a junction of Asia and America.

“ I am so far from doubting the testimony of Deshnew, that I am involuntarily compelled to entirely discredit the affidavit of Malgir; but for a better reason than that assigned by Captain Burney for doubting Deshnew and Busch. Malgir affirmed, that Taras Stadukin *did, many years before*, relate to him so and so. Now this favourite deposition was made in 1710, only *two years after the voyage was performed; for the Kurile Isles became known from it, and they were discovered in 1708*; independent of the time necessary for Stadukin to have returned to the river Lena, to have related his adventures, and the time necessary for Malgir to have gone to Yakutsk to make his affidavit. *Many* is a strong word; and supposing

that Stadukin had, after his voyage, flown to the river Lena, and that Malgir, after hearing the news, had imitated him, and taken his airy flight to Yakutsk, still this hearsay testimony could only have been delivered to him the year *before*, viz. in 1709, at which period Taras Stadukin was no doubt alive,* that is, if he performed the voyage the year before.

“ It is related that Stadukin crossed a narrow isthmus; but where that narrow isthmus is, it is difficult to say; yet will I endeavour to explain the riddle. Here, at Nishney Kolymsk, is a tradition, and I agree with Captain Burney, that traditions ought not to be disregarded, of a *Stadukin* having sailed in a *hotche* from the *Kolyma* up the *Great Aniuy river*; in that river there is an *isthmus*, or shallow sand-bank, over which the *hotche* could not sail; she was cut into two parts, floated over, and put together again; he continued his voyage until he reached the *Anadyr mountains*, which he crossed on foot, built another vessel at *Anadyrsk*, and then sailed upon his voyage to the *Tchukotshai Cape*. Whether this tradition, which is still fresh here, refers to *Taras Stadukin*, I know not; I believe not. I think it refers to the voyage of *Michael Stadukin*, who had in vain attempted to go by sea during the life of *Deshnew*, and was therefore compelled to venture over the chain of mountains then unknown, and for the particulars of which voyage I refer to a page 379 of a note in *Coxe*.† These circumstances coincide in general. *Malgir* asserting that a *Stadukin* related the tale many years before, confirms me in the opinion that

* I mention this, to ask why *Stadukin* was not summoned instead of *Malgir*?

† Indeed the like voyage is noticed at page 75 of Captain *Burney's* book.

of the river Tcherma; he reached that source on the 23d of March (as will appear by a back calculation); from thence he marched due north sixty days, and reached the Icy Sea near a considerable river; that was on the 23d of May. He afterwards marched along the Icy Sea-coast for fifteen days; at times so far from the land, that the mouths of the rivers were barely distinguishable; done, no doubt, to shorten his journey, instead of going round the bays. From the 7th of June, when he arrived, until the 15th, he halted, when he again resumed his journey along the Icy Sea-coast for fifteen days more, and halted on the 30th of June (near the easternmost of two rivers, which he had passed within one day's journey of each other) until the 3d of July, when he *attempted to cross the promontory*; but it was not until the 14th of July that he was enabled to march from the western to the eastern coast, (having high mountains to climb, it was ten days before he reached the latter, the country of the Shelages being on his left,—viz. on the 24th of July,) when Pavlutzki embarked part of his people in baidares, and, with the rest, continued his march along the sea-coast, in a south-east direction; when, in seven days, on the 1st of August, he came to the mouth of a river; and, in twelve days more, the 13th of August, to the mouth of another, beyond which, at the distance of ten versts (six miles) there ran into the sea, *far towards the east*, a head of land which, at the beginning, was mountainous; but, gradually diminishing, ended in a plane, the extent of which could not be seen. Here Pavlutzki ceased to follow the sea-coast, and turned *inland* towards the Anadyr, reaching the fortress in seventy days, or on the 21st of October.

“ This is the amount of the information derived from Pavlutzki’s journal ; and, before I state the courses and distances I think he actually performed, it may be necessary to inform you, that he was provided with rein-deer in considerable quantities, which answered the purposes of carrying his arms, ammunition, and baggage, as well as his provisions, and ultimately also served for food. The Tchuktchi people, when they travel with *laden rein-deer*, do not go more than *eight or ten versts a-day*, equal to four and a half, or six miles. They are three and four months upon their journey hither from the Bay of Saint Lawrence, although the distance does not exceed eight or nine hundred versts (four hundred and sixty, or five hundred and twenty miles.) Billings was six months. Pavlutzki tells us, that upon his first journey, he did not go more than ten versts, or six miles a-day, halting at times. I shall therefore venture to admit his having gone *eight versts a-day*, or four miles and a half, in a direct line, when in a mountainous country ; and ten versts, or six miles a-day, when on the Icy and Eastern Sea-coast, where he would be much assisted. Upon his return to Anadyr, I shall allow him also eight versts a-day, more than which he can hardly be expected to have gone ; uncertain of the proper or direct route, wearied and worn out as his people must have been, after a long, laborious, and perilous campaign, and exposed to the heavy falls of snow which the months of September and October must have produced in such a latitude.

“ Pavlutzki’s *first* route lay between north-east and east—say east-north-east, twelve days, or fifty-four miles ; his *second* route lay due north, sixty days, or two hundred and seventy miles ; his *third* route east, thirty days, or one hundred and seventy

miles ; his *fourth* route east-south-east, ten days, or forty-five miles ; his *fifth* route south-east, seven days, or forty-two miles ; his *sixth* route south-east, twelve days, or seventy-two miles ; and his *seventh* route a direct line to the Anadyr fortress, whence he had departed, a distance which should not *exceed* seven hundred versts, or four hundred miles, to be made in seventy days.

“ Having thus given an idea of the courses and distances of Pavlutzki's march, I will draw your attention to the places he arrived and halted at, and which are, in a manner, noticed in his journal.

“ His first route carried him to the source of the Tcherma, a river well known ; his second route to the Icy Sea, near to a considerable river, known here by the name of the Bolchoi Reka, and situated a little to the east of Cape Baranov Kamen ; his third route carried him beyond the easternmost of two rivers, which I suppose are the *rivulets* seen by *Shalauhoff*, in Tchaon Bay, (for rivulets they would only appear in August and September to *Shalauhoff*, although in June and the beginning of July, they might otherwise appear to Pavlutzki,*) and the Kvata and Packla of Billings. Pavlutzki's *fourth* journey carried him to a place where he procured baidares, consequently to a place where there were inhabitants. That place I take to have been the Cape North of Cook,† and the Karpa or Ekakta of Billings. It is there that the last of the Eastern-Sea Tchuktchi are said to reside, and where there is a fishing-place, according to Captain Billings ; it is there also that Cook saw

* This I presume is natural ; people in vessels may deem a body of water a rivulet, which to an army would appear as a river.

† Or more properly Cape Kuzmin of Baron Wrangel.

a body of water, and which may serve as a sheltering place for fishermen and their boats. Pavlutzki's fifth route carried him to a river, which I take to have been the Amgooyan of Billings ; and his sixth route carried him to another river, which I take to have been the Vouchervaren of the same person. The head of land beyond it, I consider is the cape which induced Behring to turn back, and the Bay of Klashenie of Billings, or near Burney's Isle of Cook: These particulars strikingly confirm each other, as to an island off Cape North ;* there is said to be one upon which the Tchuktchi preserved the rein-deer during the season of hostilities.

“ I will now describe the route laid down in the map prefixed to Captain Burney's book. I know not who is or was the author of it ; but of the map itself, I will prove that absurdity and incorrectness are its prominent features, and as such, undeserving of any other attention than to expose it.

“ It has been already said, that Pavlutzki, during the *first* twelve days, marched between north-east and east, and, in the following *sixty* days, due north, and yet this sapient map gives Pavlutzki to have gone nearly the same distance during the *twelve* as during the sixty days, hence no difficulty in accounting for a north-north-west, instead of a north course. Upon the Icy Sea-coast, Pavlutzki is represented as having gone, in THIRTY days, only about one hundred and twenty-five miles, or *four and a-half* a-day ; while in the following ten days, and when he had high mountains to climb, he is enabled to have gone about one hundred and forty-three miles, or *fourteen* miles a-day. If Pavlutzki

* Even Captain Cook supposed there was an island off Cape North. See page 247 of Captain Burney's book.

crossed the country of the Tchuktchi in ten days, in defiance of an active enemy and a mountainous country, whence arises the justness, or propriety, or even necessity, of Captain Barney's assertion, that '*Pavlutzki did not cross at a narrow part of the Tchukotki country?*' Surely fifty or sixty miles cannot be termed a wide part, and more he could not have gone in ten days. The author of that map had done better to have allowed four and a quarter miles a-day when traversing the high mountains, and fourteen miles a-day when on the Icy Sea-coast; this at least would have been more reasonable, and still in great error; such, however, would have left a narrow isthmus; a junction with America was the object, and Captain Barney's map suited best. Wide or narrow, Pavlutzki crossed, leaving the country of the Shelages upon his left, (mentioned, no doubt, to insinuate a large tract of country being there,) and he reached a place where he procured baidares; that place we agree in supposing to have been the Cape North of Cook.* From thence this map represents his going south-east one hundred and fifty miles in seven days, or twenty-one miles per day; and yet, during the following twelve days, and with the same assistance, he can only go one hundred and thirty, or eleven miles a-day. Why this difference, I would ask?

* When this letter was written to the Royal Society, I did suppose Pavlutzki to have crossed to Cape North of Cook; now-a-days, and with the chart of the survey of north-east Asia, I think otherwise. I think Pavlutzki must have crossed to Cape Kuzmin, the southern point of which is distant from Cape North ninety miles, to be divided between the two following journeys, which occupied nineteen days' time; no great increase, when it is considered they were supplied with baidares, and consequently might have been able to go four or five miles a-day extra.

Lastly, to enable Pavlutzki to reach Anadyrsk by the 21st of October, he went, without halting, five hundred and seventy miles in seventy days, or more than eight miles per day; an impossibility, with an army such as I have described, in such a desolate country.*

“ I would ask the author of that map what an European army can do, in a fine country, and in possession of every thing that is requisite to nourish them? I am no soldier, but I should think twelve or fifteen miles in continuation for seventy days to be a regular march, while twenty or twenty-five would constitute a forced march, especially if continued for the same period. In this country, a different calculation must be resorted to; the nature of the climate, the depth of the snow, the lofty and barren mountains, the weight of their arms, clothing, &c. are alone obstacles to prevent the *possibility* of a thing of the kind, as passing with an army more than five or six miles per day direct, in a long succession of months. I also remark in the map, which is a disgrace to such a book as that coming from the pen of Captain Burney, that Pavlutzki is represented as having reached *Tchukotskoi Noss*; had such been the case, *Pavlutzki would never have seen land running far into the sea towards the EAST*, as his journal ex-

* It may not be amiss for the reader to measure the distance between Cape North and the point whence Pavlutzki turned inland towards the Anadyr, and the south-east march of *two hundred and eighty* miles along the coast, according to Captain Burney, which two hundred and eighty, added to the distance between Capes North and Kusmin, where Pavlutzki must have crossed, will make three hundred and seventy miles, or twenty miles a-day; which could not have been accomplished, as part of his army marched along the beach.

presses ; but he would have seen it turning to the south-west and west-south-west towards the Anadyr ; had Pavlutzki reached *Tchukotskoi Noss*, he would never have turned inland towards the Anadyr, but he would have continued his voyage along the sea-coast, provided as he was with baidares.

“ It is apparent that Pavlutzki saw the land which induced Behring to turn back ; a land which he did not reach, for he could not see its extent to the east, while Behring could not see its extent to the west. I think there can be no doubt that such place is the Bay of Klashenie of Billings, in about the latitude of $67^{\circ} 18' N.$, or about twelve or fifteen miles south of the point where Pavlutzki arrived at, which, in that case, would have been to the latitude $67^{\circ} 33' N.$, eighty-three miles south of Cape North, or one hundred and seventeen miles south-east of it ; a distance which Pavlutzki might with facility have reached in nineteen days, when travelling with baidares, being only six miles a-day: he might have gone more, but he could never have reached *Tchukotskoi Noss*, (independent of the reasons I have before given, as the seeing of land to the east,) which is one hundred and seventy-one south, and two hundred and forty-two distant from Cape North, or thirteen miles per day.

“ Here it may not be improper to ask Captain Burney, why he has accused Captain Billings of placing an island off the Bay of Klashenie to correspond with the Cape North of Cook ? There is a difference of about eighty miles in the latitude of the two places, vide page 194. Does Captain Burney forget the island bearing his own name, in lat. $67^{\circ} 45' N.$? or does he forget that the land to the southward of it forms like an island, as asserted by Captain Cook, in his journal of September

2d, 1778? Whether the Bay of Klashenie is near Burney's Isle, or nearer to the apparent isle to the southward, is to me difficult to decide. When Billings, in a *baidare*, visited the Bay of Klashenie, the land might have formed like an island; but he never could have supposed that bay to have been Cape North; for he has expressly placed the latter near to the river Ekakta. This attack of the Captain's, as are several upon deceased individuals, was unnecessary, and more than the simple title of his book justified. Captain Burney should recollect that comparisons are odious,—that drawn by him between Captain Billings and Ledyard very much so.* Had Captain Burney known the real characters of these two men, he would have remained silent, and not have unjustly censured the one, nor unmeritedly have extolled the other. It will do no good to discuss upon their merits or demerits; both were unfortunate, and there I leave them, to draw your attention to the voyages of the enterprising Shalauoff, who, in my opinion, certainly reached Shelatskoi Noss, and confirms the practicability of a passage, although attended with difficulty and danger, vide page 390 of Coxe's Discoveries.

“ Shalauoff stood to the north-east to double *Shelatskoi Noss*, but before he reached the islands near it, he was retarded by contrary winds, and, on account of the advanced season, obliged to seek for a wintering place; he accordingly sailed south into a large open bay, which, his journal says, is on the west side of the Noss, and formed by it and

* Captain Burney's practice and precept are widely different, vide page 280, when speaking of subordination in the case of this same Ledyard.

the island of Sabedei. In that bay he could not winter, no fish nor wood being to be procured, although he discovered *two rivulets*. Shalauoff got out of the bay, and round the island of Sabedei, when he fastened his vessel to a body of ice, and was carried by a current west-south-west five versts, or near three miles per hour; hence I infer the run of the coast from the Kolyma to Sabedei to be east-north-east and west-south-west. On the second day after leaving the island of Sabedei, he saw far to the north-east by north* a mountain; in other words, he saw the land he had left, viz. Shelatskoi Noss. Upon the fourth day, he regained the Kolyma, determined to again make the attempt; which, alas! he did, never to return.

“ I agree with the learned Mr Coxe in doubting whether Shelatskoi Noss extends so far to the north as placed in Shalauoff's chart, for the able reasons given by that gentleman; but I am of opinion that the general outline and form of the coast will be found perfectly correct. The accounts of Pavlutzki and Shalauoff correspond. The river whence the former crossed to the Eastern Sea must necessarily be in nearly the same latitude as the place to which he came out at, and which we suppose was Cape North; that river must therefore have been in Tchaon bay, which is the name given to Shalauoff's bay, and that river, according to Billings and Shalauoff, cannot be far distant from Shelatskoi Noss. The accounts of the two latter gentlemen also correspond, and prove the existence of a promontory from which Billings could not have been *far distant*. It appears by Billings' map that the Karpa and Ekakta rivers run into the ocean

* This is by compass, or N. E. $\frac{3}{4}$ E. true.

east of the Noss, while the Packla and Kvata enter the Icy Sea *west* of the Noss. It also appears that when Billings was on the *Karpa*, he was fifty-one miles from the *Eastern Sea*; and only seventy-four miles from the Icy Sea when on the *Kvata*. It may, therefore, be admitted, that the promontory lies between those two rivers, and would not be far to the *west of north* from him; for, when Billings was on the *Kvata*, he was in his most northern situation; as his route changed from north-west to west and south-west, being a right angle to his former general route, and demonstrating that it was there the *adverse ridges* or chains of mountains had united, and that, not far distant from their junction, they must terminate in a *due north direction*, that being the central point between north-west and north-east, the courses of the adverse ridges.

“ I should calculate the Noss, when Billings was on the *Kvata*, and, at the junction of the ridges, to have been as far distant as it was to the Eastern or Icy Seas; fifty-one miles added to seventy-four will give one hundred and twenty-five miles, the half of which is sixty-two miles and a half, the distance I take the Noss to have been from him due north, which is also about the same distance which he journeyed along the valleys of the Eastern Sea coast. That the run of the mountains on the eastern coast is north-west and south-east, we have the testimonies of Cook, Pavlutzki, Billings, and Behring.

“ Admitting the longitude of Cape North to be, as stated by Cook, 181° east, I should infer that of Shelatskoi Noss to be about 175° or 176° E., and in latitude about $70^{\circ} 20'$, or $70^{\circ} 30'$ N. To support this idea of mine respecting the latitude and

longitude of Shelatskoi Noss, (as derived from the voyages of Billings and Shalauoff, and supported by circumstantial evidence,) let us resort to another mode of arguing, equally corroborative. The longitude of Cape North is 181° east, that of Cape Baranov Kamen is 169° east; the difference is 12° , or about 240 miles of longitude, while there are only 37 miles difference of latitude; the inference, then, is, that there cannot be any *very northern land between them*, especially supported as this argument is, when the distance from the island of Sbedei to Baranov Kamen is deducted as having been traversed by Shalauoff.

“ Let us, however, have recourse to another mode of calculating the latitude and longitude of Shelatskoi Noss; let us refer to the well-known direction of the land from *Baranov Kamen to the east*, and the equally well-known course of the mountains, and direction of the coast on *the eastern shore*; the former is east-north-east and west-south-west by compass, the latter north-west and south-east; although, beyond Cape North, Captain Cook was of opinion that the land would be found to take a *very westerly* direction. Let a line be drawn from Baranov Kamen, latitude $69^{\circ} 33'$ longitude 169° east, to the east-north-east, and let another line be drawn from Cape North, latitude $68^{\circ} 56'$, longitude 181° east, to the north-west by west, and, at the point of *intersection*, place *Shelatskoi Noss*; it cannot far err; it will be in a middle longitude of 175° or 176° east—as it will, also, if placed due north of the mountain junction on the *Kvata*—as it will, if Shalauoff's chart be correct—and as it will, also, in the event of Deshnew having sailed round; because, in the last case, it will not form any remarkable appearance, or promontory, suffi-

cient to draw forth the descriptive powers of an unlettered, but enterprising, Cossack. As to its formation, we have nothing to judge by, except the undoubted existence of a large bay to the west of it, and the run of the land due north from the eastern shore of that bay for a considerable distance, according to Shalauoff's chart, and as asserted by Pavlutzki; and this will be true if the south-east part of the bay is in near the same latitude as *Cape North*. Pavlutzki could not have seen eighty or ninety miles, and he therefore crossed the promontory, uncertain how far the land might go to the north; or he knew it was a promontory, and therefore unnecessary to be travelled round at a great loss of time, when he could and did cross it in ten days.

“Should the situation of Shelatskoi Noss be found as I have ventured to predict, I will then maintain that Deshnew was not bound to notice it as a remarkable promontory; for, allowing him a common course of sailing, and for him to have kept a common offing from the shore, he could only have changed his course *four* points, and impossible to have changed it *five* points. Let a chart be formed, and Shelatskoi Noss be placed as I have represented, and no promontory will be apparent, at least not such a one as to strike the attention of a trading Cossack; but to double the *Tchukotskoi Noss* the case is very different; the course must be changed from south-east to south, south-west, west, and even to north-west, to enable a vessel to keep *sight of the land*. Here is indeed too remarkable a difference to be passed in silence, even by the most illiterate, from a south-east to a north-west, half the compass; this will account for the *remarkable*, or, as it is termed, the ‘simple,’ de-

description of *Tchukotskoi Cape* by Beshmew, who says, 'it turns in a circular direction towards the Anadyr,'* independent of the necessity for describing it in defence of the discovery of the korga, or sand-bank, at the mouth of the Anadyr.

"The currents will next occupy a little of your attention; and although they do not argue much, yet what little they do argue, is in favour of a clear, open, and extensive sea to the north-east of the Kolyma, and a near termination of the continent of Asia, in that direction, from the isle of Sabelai. Although a current of two or three miles an hour be experienced in the narrow straits of Behring, it does not follow that such current would be felt in the wide expanse to the north, at a distance of four hundred miles of latitude. It also appears that the currents are periodical; but were such not the case, the period had gone by, the ice and snow had done melting, the sun had withdrawn its power, and the waters of the south were not necessary to fill up the voids which are caused in the north, by exhalations or otherwise. I am, however, of opinion, that the currents are generally produced by the action of the wind upon shallow waters; in other words, that whatever way the wind blows, that way the current goes. Cook had always light airs when he tried for a current, and found none, and it is not a little extraordinary, that when the north-west gale set in, the current was never tried for.†

"In the following season a current was found,

* Surely such a change of courses can only be termed circular.

† I am aware of the difference in trying for a current in a calm and during a strong breeze; and I mention the circumstance to prove that there is always a current in that part of the world when there is a breeze.

at one time setting north-west, at another time east-north-east, but in both cases *with the wind*. Such was also the case with Billings and Shalauroff in the sea of Kolyma, where, however sudden the change of wind has been, that of the current has been equally sudden, and in a relative proportion to the strength of wind. Captain Burney remarks, that the currents experienced by Shalauroff *were almost uniformly from the east*. I reply, the wind was almost *uniformly from the same quarter*. Upon the 23d of August, however, there was a *north-west wind*; Shalauroff steered to the *north-east*, but the current carried him *east and south-east* among floating ice; he again stood to the *north-east*, to double Shelatskoi Noss, but a *contrary wind* set in, and a *west-south-west* current *immediately* followed. It is remarked in the journal of Shalauroff, and I cannot clearly comprehend it, that from the 28th of July to the 10th of August, he had a foul wind or a calm; and that when a favourable breeze did spring up, *he met a strong current* going west, of *half-a-mile per hour*, rather too slight a current to merit the appellation of strong. I suppose it was the dying remnant of a current, which a continuance of north-east winds had caused, and which the subsequent calm had not quite abated.

“ With respect to the currents encountered by Billings, they differ in nothing, except in strength, from those experienced by Shalauroff, attending, as they did, always upon the wind. July the 1st, they had a fresh breeze from the *north-east*, and a current which carried them *two points to the west*. July 20th, they had a fresh breeze from the *north-west*, and an *east* current of *three miles per hour*, which current continued until midnight of the 25th, *when there was but little wind, still from the north-*

currents; if so, then they prove the existence of an open and extensive sea to the north where would Billings' three miles per hour go to, or Shalauoff's three miles per hour come from?

"It may be said that a north-west wind would drive water into a bay, (if one there be according to Captain Burney's idea,) and that it must have an outlet somewhere, and the most open would be to the south-west or south-west. True, I admit such a position of a north-west wind producing a westerly current; but the argument will not hold good with a steady wind. Did the continent of Asia join the North American, or run very far north and form a land to the north, a north-east wind could not only not produce a west or south-west current, but it could produce no current at all; on the contrary, there would be still and smooth water, because such a wind is an *off-shore wind*, and therefore it was, what Shalauoff had, upon his return, doubled, or at least the island of Sabedei, and then receive a current of three miles per hour from the south."

soon have left the bay dry ; at least, such, I presume, will appear to an impartial person.

“ From the currents I will make a few observations upon a Mr Busch and a harpoon ; previous to which it may not be improper to ask Captain Burney, not how he can write *Irish*, for any man of talent can do the like, but how he could expect such bulls to be passed in silence, vide page 110. It appears that, in 1716, was completed at *Ohotsk* the *first* vessel capable of navigating the open sea ; she sailed, and put into a port on the western coast of Kamtchatka, where a whale had been cast on shore, having in its back ‘ a harpoon, *marked with Roman characters.*’ Captain Burney says, to entitle this story to any credit, it ought to be stated, ‘ what the characters were,’ and yet he admits, upon the authority of Muller, that Busch could neither read nor write, and was otherwise so ignorant a man, that Muller could not suppose him capable of imitating a like story, which had happened on the coast of Corea sixty years before. Captain Burney says, Muller was too partial to both these reports, because they were in exact correspondence with his own hypothesis ; a very natural reason, to be sure. I suppose, also, the Captain is inclined to doubt them, only because they happen to be in exact opposition to an hypothesis which he disclaims, but to prove the possibility of which, he has written three hundred pages of a book. Mankind are naturally fond of their own opinions, especially philosophers, of which class Muller is denominated by Captain Burney, when treating upon a far different subject than north-east discoveries ; but I think it can be easily proved, that Muller has rejected more really doubtful and improbable evidence than Captain Burney, who

appears, throughout his work, like a drowning man with a straw, clinging to every trivial circumstance which would in the least support or favour a continental junction.

“ But Captain Burney proceeds much farther, for he says, ‘ *admitting the fact as relates to Busch and the harpoon, it would fall far short of proving that whales travel from the European to the Tartarian Seas; as the Russians must be supposed, LONG BEFORE the time of Busch, to have THERE introduced the use of European harping irons;*’ and yet Busch sailed in the FIRST VESSEL. Let Captain Burney tell us what place he alludes to by the word *there*, and to whom the Russians had introduced the use of European harping irons so LONG BEFORE. Does the Captain know that Kamtchatka had only been discovered *eighteen years*, and conquered but *five years*? The Captain may say, it is natural to suppose that vessels had gone from the Anadyr; but that would have been a mistake, for the fruitful Stadukin was the *first*, (he sailed in 1708,) for the Kurile Isles were discovered in consequence. Such is, however, not the case; the Russians never were, nor do I think ever will be, whalers in this part of the world; they have better fish to fry, than to seek for whales without a market to carry their oil to. In short, I can see no reason for doubting the testimony of Busch or Deshnew—ignorance does not beget falsehood. It is a pity that Captain Burney did not also admit the fact of the whale and harpoon story, which occurred upon the coast of Corea, sixty years before, when neither Okotsk, Kamtchatka, *nor* the Anadyr, had been *discovered*, much less *settled*; to whom, in such a case, would Captain Burney have had the Russians introduce the use of European

harping irons, and where then would he have had the whale come from? In this case, therefore, Captain Burney has been at least prudent.

“ It is in speaking of Mr Busch that Captain Burney has paid such a sweeping and *inimitable* compliment to *sea voyagers*; we ought to thank him much; I do,* although I confess, I do not think *I* merit it. Captain Burney sailed under the celebrated Cook in his voyages of discovery; he no doubt made many voyages before, as well as since that period; and, as I give him the credit of being a good Christian, and that *he judges as he would be judged by*, then Captain Burney must be a great *imitator indeed*. I do not know of what his South Sea Voyages are made, but if they are of the same materials as his Northern Voyages, then certainly he merits his own compliment. Captain Burney’s discrediting of *sea voyagers*, will naturally account for his partiality to *land voyagers*, such as Stadukin, Pavlutzki, Ledyard, and Andreef.—But I beg pardon for this railery; his age and his wisdom command more respect.

“ Writing Andreef’s name will also bring him into notice for a few words. In page 276 of Burney, there is a passage thus:—‘that when the depth of water was found to decrease, there can be *but little doubt they had approached the land seen by Andreef*.’ It is a most extraordinary circumstance that people will persist Andreef saw new land; he *saw* only the *Bear Islands* at the mouth of the Kolyma, but no land, nor indication of land, to the north of them; whatever he may have *heard*, his

* Captain Burney says no men have been greater *imitators* than *sea voyagers*.

journal, which is now before me, mentions nothing of the kind. Since Andreef, a Mr Gedenstrom, and with whom I was acquainted in Irkutsk, has travelled across the Frozen Sea in the same direction as that over which Billings sailed. Gedenstrom saw nothing; and had there been any other land than the Bear Islands, he must have gone over it, as he went beyond one hundred and twenty miles north-north-east from the Kolyma;* (as has also Baron Wrangel, since I addressed this letter to the Royal Society.) When Gedenstrom was *half way* on his journey, he saw indications of high land to the *east*, which I doubt not was the same land seen by Shalauoff on the second day of his leaving the isle of Sabedei. It is to be regretted that Mr G. did not change his route, instead of his continuing a due north course. I feel surprised at the error respecting Andreef, because the Russian government have crept into the same, as must evidently appear, when reading the instructions given to Billings.

“ With respect to a short voyage made by Amossow, it serves only to confirm the account of Shalauoff, as well as to prove that a tribe of people certainly did dwell between Shelatskoi Noss and the Kolyma, and which may have been the Shelages tribe; their habitations were observed in the same narrow channel, both by Shalauoff and Amossow; but I am in doubt whether the island

* Besides, it may be a matter of speculation, whether dogs or baidares could, consistently with safety, have travelled over the ice or sea so far as Andreef's ideal land is placed. By the word ideal, I do not mean to infer that no such land exists; I mean only, that it is a traditional report: else how came Andreef to know the name of the land, as well as of its inhabitants, which words have no connexion with one another?

of Sabedei is now in existence,* for such is the rapid increase of the continent towards the north, that near Svatoi Noss, to the westward of this, there was, only sixty years ago, a wide channel between the isle of Diomed and the main land, yet has this island been united to the continent now fifteen years. Such an extraordinary fact may throw some light upon the cause of the very shallow water all along the Asiatic Icy Sea coast.

“ It is hardly worth arguing whether the waters of the *sea decrease*, or whether the *sea recedes*, (although I think both are facts,) such a difference may be amicably settled, by admitting that the land *increases*, of which there are annual proofs at Baranov Kamen, and Shalauoff's Huts, at the mouth of the Kolyma. The numerous large rivers which enter the Asiatic Icy Sea must carry with them immense quantities of loose earth, trees, and even of large rocks, which must serve to shallow the water to a great distance from the land. The annual evaporation must also be very great, and much greater than even the numerous large rivers can in three months refund; hence the waters must decrease; and if that be the case, they must also recede. The like circumstance may also take place in the American Icy Sea, although we have lost the knowledge of so many or such large rivers as there are in Asia, all of which, except the Okota Anadyr, and Amour, enter the Icy Sea.

“ The immense quantities of loose earth, wood, and rocks, which are annually washed into the Icy

* This doubt is, however, removed, as will appear by the result of the expedition under Baron Wrangel. The dwellings seen in the narrow channel by Amossow, between Sabedei and the main land, are even still in existence, for Baron Wrangel saw them.

Sea, have continued to increase for ages, and will continue to increase ; consequently, the difficulty and danger of navigating the Icy Sea have continued, and will also continue to increase, in a relative proportion. The facility which, comparatively speaking, existed two and three hundred years ago, of navigating the seas in high latitudes, no longer exists. When our improvements in naval architecture, in geography, and in astronomy, as well as our improvements in seamanship, are taken into consideration, we may well be surprised at the successful voyages performed by our ancestors in cockle-boats, and manned by lubbers, compared to those of the present day. Look back to those three American voyagers, Baffin, Hudson, and Davis ; they did not experience the awful dangers encountered by Ross :* consequently, the difficulties and dangers must have increased in a greater proportion than our improvements in general knowledge.† The causes may be easily stated ; there is more land, more ice, and less water, —I mean in a fluid state ; the overfloodings of the rivers produce the former, and the increase of cold the two latter ; independent of the circumstance that the already formed mountains of ice, and which have for ages existed under the Pole, have continued, and will continue to increase, even though the seasons did not change.‡ I have often ob-

* Much less those borne by Parry and his companions.

† It may be asserted, without fear of contradiction, that ships or vessels now-a-days *cannot* go where they did two or three hundred years ago.

‡ I say this, to explain that ice begets ice, as the more it contracts and leaves fissures of water, the more exposed is that water to the atmosphere, and consequently the more likely to freeze.

served a great attractive power in cold ice,—that is, in ice exposed to 35° and 40° of Reaumur.

“ I am, however, wandering, and will therefore draw my letter to a conclusion, trusting that I have proved, *if ever Deshnew did reach the Anadyr with the vessels in which he sailed from the Koly-ma, that he must have SAILED round the north-east of Asia, and, consequently, that no junction with America can exist.* I trust I have proved a perfect coincidence in the narrations of Deshnew, Pavlutzki, Shalauoff, Cook, and Billings ; and that there is every reason to conclude that the north-east termination of Asia, or Shelatskoi Noss, must be near the latitude of $70^{\circ} 20'$, or $70^{\circ} 30'$, north, and in the longitude of 175° or 176° east. I think it will appear, by what I have said respecting the currents, that they argue for a free passage,—that is, *unobstructed by land.* I trust also, these arguments are supported a good deal by the directions and junction of the two chains of mountains which meet on the Kvata ; the course and distance to the sea from the rivers Karpa and Kvata, which enter the ocean on different sides of the promontory, or Shelatskoi Noss, aided by the narrative of Busch, and the circumstantial proof arising from the well-known course of the land east of Baranov Kamen, and the equally well-known course of the land on the eastern shore ; together with Shalauoff's voyage and map, Pavlutzki's march and journal, and Billings's journal and map,—all of which are such corroborating testimonies, that I doubt not I am justified in ridiculing the idea of a continental junction, or even of a *great* promontory.

“ As to Cook's expedition not experiencing hollow waves from the north, they had light airs ; besides, the quantity of ice in that direction, and

the shallowness of the water, might account for it. I am, however, of opinion with Captain Burney, that there is land to the north of Behring's Straits; but when I look to the situation of the *Discovery*, when off Icy and North Capes, no land being visible north or east of the former, nor north or west of the latter, I cannot but call them circumstantial proofs of their being the north-west and north-east extremes of their respective continents.

"Should you be of opinion that these my arguments are just, reasonable, and impartial, I am satisfied, although at the expense of an able gentleman, as his book and arguments will then appear partial, untenable, and inconclusive. In justice, however, to Captain Burney, I must admit that the multiplicity of subjects which seem to have engaged his attention, and to have called forth his wandering pen, when only professing to write "*A Chronological History of North-east Discoveries*," plead much in his behalf; he deserved better success; but I cannot see any probability of his hypothesis being verified in his or my life-time, unless the original longevity of man be restored, and that we are enabled to reach the age of nine hundred or a thousand years; in that case there will be a hope, at least, if the two continents continue to make such rapid advances towards the north; in that case, a junction will take place at the *Pole*.

"I will now take my leave both of Captain Burney, and you, gentlemen, and trust that all three of you will excuse the length of this letter, as well as its contents. Should you think it deserving the attention of the Royal Society, I shall be obliged by your causing it to be read; should they approve of it, I shall feel honoured. Neither they nor Captain Burney will long entertain a doubt

on this interesting question ; an expedition will leave this in March, to traverse round the Shelatskoi Noss with dogs ; and, about the same time, I shall attempt penetrating through the country of the Tchuktchi ; one or both may succeed. Be the result what it may, I shall have the honour of addressing you for the information of the Royal Society, and the transfusion of knowledge in general ;* I will also forward any other useful or interesting information which I may gather during my rambles.

“ It remains for me only to hope you will excuse the *style*† of this letter, and it is with great sincerity I make a request, that if, in your opinion, it is undeserving the attention of the Royal Society, by committing it to *the flames*, its memory will perish, and my credit will be saved ;‡ the interest of the subject has alone induced me to take it up, and will plead my excuse, especially as I am so unaccustomed to address any *learned body*. Be the result what it may, I shall remain, gentlemen, with every respect,

“ Your obedient servant,

“ JOHN DUNDAS COCHRANE.”

“ To the Secretary and President of
the Royal Society, London.”

Such is the copy of the letter which I addressed

* Surely this passage alone ought to have exonerated me from an intention of treating with disrespect the President, or elevating the Secretary. I did not write to the one or to the other, but to the body of the Royal Society.

† It is the style which appears to have offended the dignity probably of the Council.

‡ Why was not my request complied with ? This is unmerited, and derogatory to the character of learned gentlemen.

from the river Kolyma to the Royal Society. My readers are aware of the reception it has met with, not from the learned body composing the Royal Society, but from Sir Humphrey Davy and the Council ! Now, whatever may be his or their opinions as to its merits, not he nor they can by any means convince me, that the arguments contained in it are not weighty, probably more weighty than he, or they, or some other people, wished ; and that, as the subject regarding the north-east of Asia was really of interest, any merit as to the solution of the question, ought to be retained by an F.R.S. ; and that, therefore, I was not to be heard or attended to. This is a lesson I had to learn ; nor shall it be lost upon me. I always, however, understood, that when a question was once submitted to and received favourably by the Royal Society, that then the subject was open to the opinions, arguments, and statements of others ; but, as it seems that a monopoly of arguing such subjects is to be retained by the Royal Society, I suppose I must bow, and content myself with submitting the matter to an equally enlightened, but less vain part of the community ; if they approve of it, I shall feel much more gratified than if my letter had been put upon some old dusty shelf, to be devoured by time or vermin, the general attendant upon the works even of the most *chemical, scientific, or enlightened*.

A reference to a map of the north-east part of Asia, will convince the reader that I have at least contributed to bring to a completion the knowledge of the boundaries of that continent. The distance between Baranov Kamen and Cape Kuzmin, was surveyed in 1821, by Baron Wrangel ;

a copy of that survey I procured in 1823, two years after I had written my letter to the Royal Society. This being understood, let the latitude and longitude of Shelatskoi Noss, as ascertained by observations, be compared with that I ventured to predict ; let the march of Pavlutzki and of Billings, the run or course of the mountains—in short, let all my arguments be ever so often considered and examined,—it cannot fail to be seen that I argued successfully.

The geography and circumnavigation of Asia being thus completed, with the exception of the Taimura Cape, which has only been traversed round by dogs, with a Lieutenant Laptieff, in 1731, is a circumstance I have the satisfaction of first stating to the public. The distance of ninety miles between Cape Kuzmin and Cape North, and which Baron Wrangel was prevented from want of provisions from surveying, has since been accomplished by the same intrepid and enlightened young officer, in as miraculous and dangerous a manner as the annals of discovery can bear testimony of. The account of it is stated in the Siberian Herald, which notices five expeditions over the ice, undertaken in a period of three years ; two of them were directed to ascertain the precise situation of the north-east Cape of Asia, or Shelatskoi Noss, while three of them were to cross the Frozen Sea, in search of real or supposed lands. The last three were unsuccessful, although some of the Tchuktchi reported to the baron the existence of land only fifty miles north-east of Shelatskoi Noss ; they even asserted that it was visible, in clear weather, from the continent. Determined to ascertain the fact, the baron proceeded to Shelatskoi Noss, and thence

directed his course north-east ; he had not, however, proceeded more than thirty miles, when a violent storm came on, and lasting several days, not only broke up the fields of ice, but actually insulated him upon a flow, which drove to the southward, and rendered it very doubtful whether he and his companions would again be enabled to reach land. Besides being exposed for several days upon this piece of floating ice, the baron was destitute of firing and provisions, cut off, as he was, from the supplies he had buried ; this good, however, attended his dangerous situation—it enabled him to survey all the line from Shelatskoi Noss to the Bay of Klashenie and Serdze Kamen. What can denote more undaunted perseverance in the discharge of a public duty, surrounded by dangers, exposed to privations and fatigues, as well as to hunger, than this *Russian* conduct ?

The boundaries of Asia being thus unquestionably known, render those of America, if not more important, at least more interesting. The reader may probably perceive a difference of three degrees of longitude, or a distance of sixty miles, in the situation of Shelatskoi Noss, between that represented in the little, and that in either of the larger maps.* The reason is this:—Baranov Cape is in $166^{\circ} 40'$ of east longitude, according to all charts, ancient and modern ; I have, therefore, in my narrative followed the custom of such charts ; but, in this probably more scientific addition to the first edition, I have felt it right to point out the error, which is, that it is $166^{\circ} 40''$ east of Paris, and not of London, which will bring the actual

* These maps are omitted in this edition.

longitude to 169° east from London. Baranov Kamen became known from Captain Billings's expedition: as an Englishman, unacquainted with foreign languages, he, of course, worked astronomical observations with English books; while the second in command, the present Admiral Saretcheff, a Russian, understood nothing of the English language, and as the Russians had not at that time any but French translations, of course the longitude was calculated by him from the meridian of Paris. It is extraordinary that the same error should exist of the longitudes of Nishney Kolymsk and Okotsk, as also of the small island of Eon in the Okotsk Sea. Captain Burney has properly stated the longitude of Baranov Kamen, which merely compresses the land south-east of Shelatskoi Noss, towards Cape North, into sixty miles of less extent than pointed out in all other maps except this little one; and, in fact, proves that my idea of the local situation of Shelatskoi Noss was correct. The only error I made was in bringing out Pavlutzki at Cape North, instead of Cape Kuzmin, I have ventured, therefore, to make that much of alteration, for the better illustration of the subject.

It is not unworthy of remark, that the *sacred promontory* which has given rise to so many discussions, to identify which was considered an easy thing, from having two islands opposite to it, whose inhabitants wear artificial teeth, cannot be identified from that fact. Such is Deshnew's description; but Shelatskoi Noss has two islands opposite to it, which are inhabited; Tchukotskoi Noss has two islands opposite to it, which are also inhabited, and so has Anadyrskoi Noss. That the second was

the one intended, I cannot doubt, as from it to Anadyr is a circular course, which river can be reached in three days ; circumstances which do not combine with Shelatskoi or Anadyrskoi Nosses. With these observations I leave the subject and the letter to the candour of the public.

THE END!
